First

Algebra and Statistics

Unit One : Real Numbers.

Unit Two : Relation between
Two Variables.

Unit Three : Statistics.

Second

Geometry

Unit Four : Medians of Triangle –
Isosceles Triangle.

Unit Five : Inequality.

Notes

The notes found at the margin of some pages in **geometry** and referred to by (*) are theorems and corollaries have been studied before

First

Algebra and Statistics

Unit 1	Real Numbers.	8
Unit 2	Relation Between Two Variables.	74
Unit 3	Statistics.	96

UNIT

1

Real Numbers

Lessons of the unit :

1. The cube root of a rational number.
2. The set of irrational numbers \mathbb{Q}
3. The set of real numbers \mathbb{R} – Ordering numbers in \mathbb{R}
4. Intervals.
5. Operations on the real numbers.
6. Operations on the square roots.
7. The two conjugate numbers.
8. Operations on the cube roots.
9. Applications on the real numbers.
10. Solving equations and inequalities of the first degree in one variable in \mathbb{R}

► Use your smart phone or tablet to scan the QR Code and enjoy watching videos.

Unit Objectives :

By the end of this unit, student should be able to :

- recognize the cube root of a rational number.
- find the cube root of a rational number.
- recognize the set of irrational numbers.
- represent the irrational number on the number line.
- recognize the set of real numbers.
- perform the operations on the intervals.
- perform the arithmetic operations on the real numbers.
- solve equations and inequalities of the first degree in one variable in \mathbb{R}
- perform the operations on the square roots and the cube roots.
- recognize two conjugate numbers.
- apply what he studied in the real numbers to find the volumes and the areas of some of the solids.

The cube root of a rational number

Remember the square root of the perfect square rational number

The square root of the perfect square rational number (a) is the rational number whose square equals (a)

The symbol $\sqrt{\quad}$ means the positive square root of a number

For example:

25 has two square roots which are 5 and -5

Because : $(5)^2 = 25$, $(-5)^2 = 25$

and we write $\sqrt{25} = 5$, $-\sqrt{25} = -5$, $\pm\sqrt{25} = \pm 5$

$$\bullet \sqrt{16} = 4 \quad , \quad -\sqrt{16} = -4 \quad , \quad \pm\sqrt{16} = \pm 4$$

$$\bullet \sqrt{0} = 0$$

$$\bullet \sqrt{\text{negative number}} \text{ is meaningless}$$

$$\bullet \sqrt{a^2} = |a|$$

Notice that:

The two square roots of the rational number , each of them is the additive inverse of the other and their sum = zero.

For example:

$$\sqrt{3^2} = |3| = 3 \quad , \quad \sqrt{(-6)^2} = |-6| = 6$$

- Sometimes , you need to factorize a number to its prime factors to facilitate finding its square root , then you take a factor from each two equal factors , then the product of these taken factors is the square root of this number.

For example:

$$\begin{aligned}\therefore 441 &= \underbrace{3 \times 3} \times \underbrace{7 \times 7} \\ \therefore \sqrt{441} &= 3 \times 7 \\ &= 21\end{aligned}$$

$$\begin{array}{r|l} 441 & 3 \\ 147 & 3 \\ \hline 49 & 7 \\ 7 & 7 \\ \hline 1 & \end{array}$$

You can use your calculator to check your answer.

The cube root of a rational number

- The product of a number by itself three times is the cube of that number.

For example: **64** is the cube of **4** because $4 \times 4 \times 4 = 64$

- The reverse of finding the cube is finding the cube root.

- Finding the cube root of a number is finding another number if multiplied by itself three times, we get the first number.

For example: **4** is the cube root of **64** because $64 = 4 \times 4 \times 4$

Definition

The cube root of the number "a" is the number whose cube equals a

- The symbol $\sqrt[3]{}$ (read as "the cube root of") is used to designate the cube root.

For example: $\sqrt[3]{64}$ designates the cube root of 64

- The cube root of a positive number is positive and the cube root of a negative number is negative.

For example: $\sqrt[3]{64} = 4$ and $\sqrt[3]{-64} = -4$

i.e. The cube root of any number has the same sign of this number.

Finding the cube root of a rational number (representing a perfect cube)

- The perfect cube rational number is the number which can be written as a cube of a rational number i.e. $(\text{rational number})^3$ as the numbers: $8 = 2^3$, $-27 = (-3)^3$
- The cube root of a perfect cube rational number is also a rational number.

For example: $\sqrt[3]{8} = 2$, $\sqrt[3]{-27} = -3$

- If a number is not a perfect cube, then you indicate its cube root by using the cube root symbol.

For example: The cube root of 4 is $\sqrt[3]{4}$ because 4 is not a perfect cube.

$$\sqrt[3]{a^3} = a$$

$$\sqrt[3]{a^n} = a^{\frac{n}{3}} \text{ where } n \in \mathbb{Z}$$

For example: $\sqrt[3]{5^3} = 5$, $\sqrt[3]{(-5)^3} = -5$

For example: $\sqrt[3]{a^6} = a^{\frac{6}{3}} = a^2$

WATCH VIDEO

5 $\sqrt{x^4} = \sqrt[3]{\dots\dots\dots}$

(a) x

(b) x^2

(c) x^4

(d) x^6

Solution

1 (d) The reason : $(-5)^3 = -125$

2 (c) The reason : $\sqrt{4} - \sqrt[3]{-8} = 2 - (-2) = 2 + 2 = 4$

3 (d) The reason : $\sqrt{(-7)^2} - \sqrt[3]{(-7)^3} = 7 - (-7) = 7 + 7 = 14$

4 (c) The reason : $\because \sqrt[3]{x} = \sqrt{4} \quad \therefore \sqrt[3]{x} = 2 \quad \therefore x = 2^3 = 8$

5 (d) The reason : $\because \sqrt{x^4} = x^2 \quad \therefore (x^2)^3 = x^6 \quad \therefore \sqrt{x^4} = \sqrt[3]{x^6}$

TRY
by yourself **1**

Complete the following :

1 $\sqrt[3]{512} = \dots\dots\dots$

2 $\sqrt{64} - \sqrt[3]{64} = \dots\dots\dots$

3 $\sqrt[3]{27} = \sqrt{\dots\dots\dots}$

4 If $\sqrt[3]{x} = 6$, then $x = \dots\dots\dots$

Final answers
of try by yourself
questions
are at the end of each
lesson to check
your answer.

Solving equations in \mathbb{Q}

- If “a” is a perfect cube number ,

then the equation : $x^3 = a$ has a unique solution in \mathbb{Q} , which is $\sqrt[3]{a}$

For example :

- The equation : $x^3 = 8$ has a unique solution in \mathbb{Q} which is $\sqrt[3]{8} = 2$
- The equation : $x^3 = 9$ has no solution in \mathbb{Q} because 9 is not a perfect cube.

Example 3 Solve each of the following equations in \mathbb{Q} :

1 $40x^3 - 1 = -136$

2 $(y - 2)^3 = -343$

Solution 1 $\because 40x^3 - 1 = -136$

$\therefore 40x^3 = -135$

$\therefore x^3 = -\frac{27}{8}$

$\therefore x = -\frac{3}{2}$

$\therefore 40x^3 = -136 + 1$

$\therefore x^3 = -\frac{135}{40}$

$\therefore x = \sqrt[3]{-\frac{27}{8}}$

$$2 \quad \therefore (y - 2)^3 = -343$$

Taking the cube root of each side :

$$\therefore \sqrt[3]{(y - 2)^3} = \sqrt[3]{-343}$$

$$\therefore y = -7 + 2$$

$$\therefore y - 2 = -7$$

$$\therefore y = -5$$

TRY by yourself 2

Find in Q the S.S. of each of the following equations :

$$1 \quad 27x^3 - 2 = 62$$

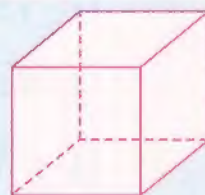

$$2 \quad (5x - 3)^3 - 2 = 6$$

Applications

Remember that

- The volume of a cube = the edge length \times itself \times itself
- The area of one face of a cube = the edge length \times itself
- The lateral area of a cube = the area of one face $\times 4$
- The total area of a cube = the area of one face $\times 6$

For example: If the volume of a cube is 8 cm^3 , then :

- The edge length = $\sqrt[3]{8} = 2 \text{ cm}$.
- The area of one face = $2 \times 2 = 4 \text{ cm}^2$
- The lateral area = $4 \times 4 = 16 \text{ cm}^2$
- The total area = $4 \times 6 = 24 \text{ cm}^2$

Example 4 Find each of the following :

- 1 The length of the inner edge of a vessel in the shape of a cube if its capacity = 8 litres.
- 2 The radius length of a sphere of volume $\frac{36}{125} \pi \text{ cm}^3$
Knowing that : The volume of the sphere = $\frac{4}{3} \pi r^3$
where r is the radius length of the sphere, π is the ratio between the circumference of the circle and its diameter length.
- 3 The diameter length of a sphere of volume equals 38808 cm^3 ($\pi \approx \frac{22}{7}$)

 Remember that

$$1 \text{ litre} = 1000 \text{ cm}^3$$

2 \therefore The volume of the sphere = $\frac{4}{3} \pi r^3$

$$\therefore \frac{4}{3} \pi r^3 = \frac{36}{125} \pi \quad \therefore \frac{4}{3} r^3 = \frac{36}{125}$$

$$\therefore r^3 = \frac{36}{125} \times \frac{3}{4} \qquad \therefore r^3 = \frac{27}{125}$$

$$\therefore r = \sqrt[3]{\frac{27}{125}} = \frac{3}{5} \text{ cm.} \quad \therefore \text{The radius length of the sphere} = \frac{3}{5} \text{ cm.}$$

3 \therefore The volume of the sphere = $\frac{4}{3} \pi r^3$

$$\therefore \frac{4}{3} \pi r^3 = 38808 \quad \therefore \frac{4}{3} \times \frac{22}{7} r^3 = 38808$$

$$\therefore \frac{88}{21} r^3 = 38808 \quad \therefore r^3 = 38808 \times \frac{21}{88}$$

$$\therefore r^3 = 9261 \qquad \therefore r = \sqrt[3]{9261}$$

$$\therefore r = 3 \times 7 = 21 \text{ cm.}$$

\therefore The diameter length = $21 \times 2 = 42$ cm.

Notice that : You can use the calculator to find $\sqrt[3]{9261}$ directly.

$$\begin{array}{r|l} 9261 & 3 \\ 3087 & 3 \\ 1029 & 3 \\ 343 & 7 \\ 49 & 7 \\ 7 & 7 \\ 1 & \end{array}$$

TRY IT 3

- 1 Find the length of the inner edge of a vessel in the shape of a cube with capacity equals 27 litres.
- 2 Find the length of the diameter of a sphere of volume $36 \pi \text{ cm}^3$ (Knowing that : the volume of the sphere = $\frac{4}{3} \pi r^3$)

At the end of each lesson, you will find the final answers of try by yourself questions in the same form.

The set of irrational numbers \mathbb{Q}

The sets of numbers

You had studied before the following sets of numbers :

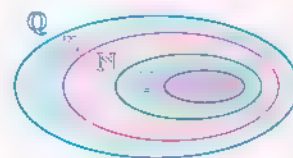

- The set of counting numbers : $\mathbb{C} = \{1, 2, 3, 4, \dots\}$
- The set of natural numbers : $\mathbb{N} = \{0, 1, 2, 3, \dots\} = \mathbb{C} \cup \{0\}$
- The set of integers : $\mathbb{Z} = \{\dots, 3, 2, 1, 0, -1, -2, -3, \dots\}$
- The set of positive integers : $\mathbb{Z}_+ = \{1, 2, 3, \dots\} = \mathbb{C}$
- The set of negative integers : $\mathbb{Z}_- = \{-1, -2, -3, \dots\}$
- The set of rational numbers : $\mathbb{Q} = \left\{ \frac{a}{b} : a \in \mathbb{Z}, b \in \mathbb{Z}, b \neq 0 \right\}$

Examples of rational numbers : $\frac{2}{3}$, $-\frac{1}{2}$, zero, 3, -5, 0.2, 25%, ...

Notice that :

$$\mathbb{C} \subset \mathbb{N} \subset \mathbb{Z} \subset \mathbb{Q}$$

The opposite figure shows that.

Prelude

- * You studied before that a rational number is the number that can be written as $\frac{a}{b}$ where a and b are integers and $b \neq 0$, and the set of rational numbers is denoted by \mathbb{Q}

* Based on the previous , you know that :

<p>All integers are rational numbers</p> <p>For example: 3 is a rational number because it can be expressed as $\frac{3}{1}$ or $\frac{6}{2}$ or ...</p>	<p>All decimals are rational numbers</p> <p>For example: 2.5 is a rational number because it can be expressed as $\frac{25}{10}$ or $\frac{5}{2}$ or ...</p>	<p>All percentages are rational numbers</p> <p>For example: 15 % is a rational number because it can be expressed as $\frac{15}{100}$ or $\frac{150}{1000}$ or ...</p>
<p>The square root of a perfect square rational number is a rational number</p> <p>For example: $\sqrt{36}$, $\sqrt{\frac{4}{25}}$, $\sqrt{0.09}$ are all rational numbers where $\sqrt{36} = 6$, $\sqrt{\frac{4}{25}} = \frac{2}{5}$ $\sqrt{0.09} = \sqrt{\frac{9}{100}} = \frac{3}{10}$</p>	<p>The cube root of a perfect cube rational number is a rational number</p> <p>For example: $\sqrt[3]{8}$, $\sqrt[3]{-64}$, $\sqrt[3]{\frac{27}{1000}}$ are all rational numbers where $\sqrt[3]{8} = 2$, $\sqrt[3]{-64} = -4$ $\sqrt[3]{\frac{27}{1000}} = \frac{3}{10}$</p>	

Irrational numbers

<p>The square root of a rational number which is not a perfect square is not a rational number</p> <p>For example: $\sqrt{2} \notin \mathbb{Q}$ because there is no rational number whose square is 2 , so $\sqrt{2}$ cannot be written as $\frac{a}{b}$ where a and b are integers , $b \neq 0$</p>	<p>The cube root of a rational number which is not a perfect cube is not a rational number</p> <p>For example: $\sqrt[3]{4} \notin \mathbb{Q}$ because there is no rational number whose cube is 4 , so $\sqrt[3]{4}$ cannot be written as $\frac{a}{b}$ where a and b are integers , $b \neq 0$</p>
<p>π is not a rational number (However $\frac{22}{7}$, 3.14 and 3.142 are rational numbers , each of them represents an approximating value of π)</p>	<p>Other examples of numbers not rational $\sqrt{5} + 1$, $1 - \sqrt[3]{7}$, $2\sqrt{7}$, $-\frac{\sqrt[3]{9}}{5}$</p>
<p>The set of irrational numbers is denoted by \mathbb{Q} Notice that : \mathbb{Q} and \mathbb{Q} are disjoint sets. i.e. $\mathbb{Q} \cap \mathbb{Q} = \emptyset$</p>	

Remarks

$$\bullet (\sqrt{a})^2 = \sqrt{a} \times \sqrt{a} = a, \text{ where } a \geq 0$$

$$\text{For example: } (\sqrt{2})^2 = \sqrt{2} \times \sqrt{2} = 2$$

$$\bullet (\sqrt[3]{a})^3 = \sqrt[3]{a} \times \sqrt[3]{a} \times \sqrt[3]{a} = a, \text{ where } a \in \mathbb{Q}$$

$$\text{For example: } (\sqrt[3]{-7})^3 = \sqrt[3]{-7} \times \sqrt[3]{-7} \times \sqrt[3]{-7} = -7$$

Example 1 Show which of the following numbers belongs to \mathbb{Q} and which of them belongs to \mathbb{Q} :

WATCH VIDEO

$$1 \quad \sqrt{0.49}$$

$$2 \quad \sqrt[3]{-0.064}$$

$$3 \quad \sqrt{\frac{25}{49}}$$

$$4 \quad \sqrt[3]{\frac{25}{49}}$$

$$5 \quad \sqrt{25} + \sqrt[3]{16}$$

Solution 1 $\because \sqrt{0.49} = 0.7 = \frac{7}{10}$

$$\therefore \sqrt{0.49} \in \mathbb{Q}$$

2 $\because \sqrt[3]{-0.064} = -0.4 = -\frac{4}{10}$

$$\therefore \sqrt[3]{-0.064} \in \mathbb{Q}$$

3 $\because \sqrt{\frac{25}{49}} = \sqrt{\left(\frac{5}{7}\right)^2} = \frac{5}{7}$

$$\therefore \sqrt{\frac{25}{49}} \in \mathbb{Q}$$

4 $\because \sqrt[3]{\frac{25}{49}} \notin \mathbb{Q}$ because there is no rational number whose cube is $\frac{25}{49}$

$$\therefore \sqrt[3]{\frac{25}{49}} \notin \mathbb{Q}$$

5 $\because \sqrt{25} + \sqrt[3]{16} = 5 + \sqrt[3]{16}$ \because There is no rational number whose cube is 16

$$\therefore \sqrt[3]{16} \notin \mathbb{Q}$$

$$\therefore (5 + \sqrt[3]{16}) \notin \mathbb{Q}$$

$$\therefore (\sqrt{25} + \sqrt[3]{16}) \notin \mathbb{Q}$$

Complete using one of the symbols \mathbb{Q} or \mathbb{Q} :

$$1 \quad 3 \in \dots$$

$$2 \quad \sqrt{3} \in \dots$$

$$3 \quad 9 \in \dots$$

$$4 \quad \sqrt{9} \in \dots$$

$$5 \quad -8 \in \dots$$

$$6 \quad \sqrt[3]{-8} \in \dots$$

$$7 \quad 5 \in \dots$$

$$8 \quad \sqrt[3]{5} \in \dots$$

$$9 \quad \sqrt[3]{-9} \in \dots$$

Solving equations in \mathbb{Q} **Example 2** If $x \in \mathbb{Q}$, find the S.S. of each of the following equations :

1 $x^2 = 5$

2 $x^3 = 7$

3 $\frac{2}{5} x^2 = \frac{4}{25}$

4 $64x^3 - 2 = -29$

5 $(x^2 - 10)(x^3 - 4) = 0$

Solution

1 $\therefore x^2 = 5 \quad \therefore x = \pm\sqrt{5}$

$\therefore \text{The S.S.} = \{\sqrt{5}, -\sqrt{5}\}$

2 $\therefore x^3 = 7 \quad \therefore x = \sqrt[3]{7}$

$\therefore \text{The S.S.} = \{\sqrt[3]{7}\}$

3 $\therefore \frac{2}{5} x^2 = \frac{4}{25} \quad \therefore x^2 = \frac{4}{25} \times \frac{5}{2}$

$\therefore x^2 = \frac{2}{5} \quad \therefore x = \pm\sqrt{\frac{2}{5}}$

$\therefore \text{The S.S.} = \left\{\sqrt{\frac{2}{5}}, -\sqrt{\frac{2}{5}}\right\}$

4 $\therefore 64x^3 - 2 = -29 \quad \therefore 64x^3 = -29 + 2 \quad \therefore 64x^3 = -27$

$\therefore x^3 = -\frac{27}{64} \quad \therefore x = \sqrt[3]{-\frac{27}{64}} \quad \therefore x = -\frac{3}{4}$

$\therefore -\frac{3}{4} \in \mathbb{Q} \quad \therefore -\frac{3}{4} \notin \mathbb{Q} \quad \therefore \text{The S.S.} = \emptyset$

5 $\therefore (x^2 - 10)(x^3 - 4) = 0$

$\therefore x^2 - 10 = 0 \quad \text{or} \quad x^3 - 4 = 0$

$\therefore x^2 = 10 \quad \therefore x^3 = 4$

$\therefore x = \pm\sqrt{10} \quad \therefore x = \sqrt[3]{4}$

$\therefore \text{The S.S.} = \{\sqrt{10}, -\sqrt{10}, \sqrt[3]{4}\}$

Notice that :

We used the concept of the square root to find the value of x according to the following remark :
If $x^2 = a$, then $x = \pm\sqrt{a}$

Remember thatFor any two numbers x, y :If $xy = \text{zero}$, then $x = \text{zero}$ or $y = \text{zero}$ **TRY YOURSELF****2**Find the S.S. in \mathbb{Q} for each of the following :

1 $2x^3 - 7 = 3$

2 $\frac{1}{2}x^2 - 5 = 3$

If you use the calculator to find the values of some irrational numbers, you will find that :

$$\sqrt{2} \approx 1.4142 \dots, \sqrt{3} \approx 1.73205 \dots, \sqrt{5} \approx 2.236 \dots$$

i.e. The irrational number is represented by an infinite decimal and not recurring.

And you can deduce an approximated value of the irrational number without using the calculator.

For example:

You can deduce an approximated value of the irrational number $\sqrt{5}$ as follows :

$\because 4 < 5 < 9$ (notice that we chose 4 and 9 because each of them is a perfect square, and the number 5 includes between them) and by taking the square root for all the terms.

$$\therefore \sqrt{4} < \sqrt{5} < \sqrt{9} \quad \therefore 2 < \sqrt{5} < 3$$

i.e. $\sqrt{5} = 2 + \text{decimal less than } 1$

To find an approximated value of the number $\sqrt{5}$, you search for the values of the following numbers : $(2.1)^2$, $(2.2)^2$ and $(2.3)^2$

$$\text{, then you find that } (2.1)^2 = 4.41, (2.2)^2 = 4.84, (2.3)^2 = 5.29$$

$$\therefore 4.84 < 5 < 5.29 \quad \therefore \sqrt{4.84} < \sqrt{5} < \sqrt{5.29} \quad \therefore 2.2 < \sqrt{5} < 2.3$$

We can say that 2.2 and 2.3 are approximated values of $\sqrt{5}$ and thus we can get more accurate values for the irrational number $\sqrt{5}$ and we can use the calculator to check the approximated value of the number $\sqrt{5}$

! Remark

Each irrational number lies between two rational numbers.

Example 3 Prove that :

- 1 $\sqrt{3}$ lies between 1.7 and 1.8 2 $\sqrt[3]{12}$ lies between 2.2 and 2.3

Solution 1 $\because (\sqrt{3})^2 = \sqrt{3} \times \sqrt{3} = 3, (1.7)^2 = 2.89, (1.8)^2 = 3.24$

$$\therefore 2.89 < 3 < 3.24 \quad \therefore \sqrt{2.89} < \sqrt{3} < \sqrt{3.24} \quad \therefore 1.7 < \sqrt{3} < 1.8$$

i.e. $\sqrt{3}$ lies between 1.7 and 1.8

You can solve the problem using the calculator as follows :

$$\therefore \sqrt{3} \approx 1.73, \quad \therefore 1.7 < 1.73 < 1.8$$

$$\therefore 1.7 < \sqrt{3} < 1.8 \quad \therefore \sqrt{3} \text{ lies between } 1.7 \text{ and } 1.8$$

$$2 \quad \because (\sqrt[3]{12})^3 = \sqrt[3]{12} \times \sqrt[3]{12} \times \sqrt[3]{12} = 12, (2.2)^3 = 10.648, (2.3)^3 = 12.167$$

$$\therefore 10.648 < 12 < 12.167 \quad \therefore \sqrt[3]{10.648} < \sqrt[3]{12} < \sqrt[3]{12.167}$$

$$\therefore 2.2 < \sqrt[3]{12} < 2.3$$

i.e. $\sqrt[3]{12}$ lies between 2.2 and 2.3

You can solve the problem using the calculator as follows :

$$\sqrt[3]{12} \approx 2.289$$

$$\therefore 2.2 < 2.289 < 2.3$$

$$\therefore 2.2 < \sqrt[3]{12} < 2.3$$

$$\therefore \sqrt[3]{12} \text{ lies between } 2.2 \text{ and } 2.3$$

TRY 3

1 Find two consecutive integers such that $\sqrt{13}$ lies between them.

2 Prove that : $\sqrt{7}$ lies between 2.6 and 2.7

- If you draw the right-angled triangle ABC at B such that :

AB = 1 length unit , BC = 2 length units , then according to Pythagoras' theorem you find :

$$(AC)^2 = (AB)^2 + (BC)^2 = (1)^2 + (2)^2 = 1 + 4 = 5$$

$$\therefore AC = \sqrt{5} \text{ length unit.}$$

i.e. The length of \overline{AC} represents the irrational number $\sqrt{5}$

- If you draw the number line and you open the compasses with a distance equal to the length of \overline{AC} and using O which represents zero as a centre and draw an arc cutting the number line at the point X on the right of the point O , then the point X represents the number $\sqrt{5}$ on the number line.

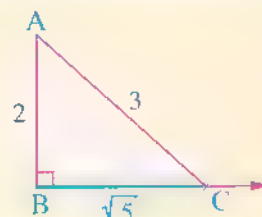

- And with the same length of \overline{AC} , if you use O as a centre and draw an arc cutting the number line at the point Y on the left side of O , then the point Y represents the number $-\sqrt{5}$ on the number line.

Generally

Each irrational number can be represented by a point on the number line.

! Remark

If you draw the right-angled triangle ABC at B such that
 $AB = 2$ length units , $AC = 3$ length units ,
then $(BC)^2 = (AC)^2 - (AB)^2 = (3)^2 - (2)^2 = 9 - 4 = 5$
i.e. $BC = \sqrt{5}$ length unit, then you can use the length of \overline{BC}
to determine the point which represents $\sqrt{5}$ or $-\sqrt{5}$

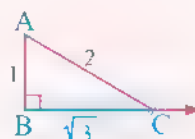

From the previous , we deduce that :

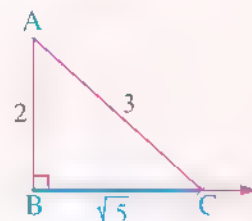

To get a line segment with length that equals the irrational number \sqrt{a} , we search for two numbers , the sum of their squares or the difference between their squares $= a$, then we use them to draw a right-angled triangle.

The following figures can help you to get two numbers such that the difference between their squares equals the square of the irrational number.

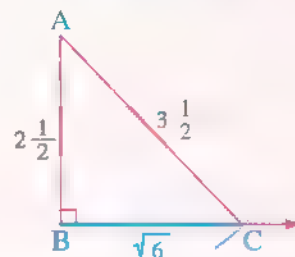

- To draw a line segment with length $\sqrt{3}$ length unit ,
then the length of one of the two sides of
the right-angle $= \frac{3-1}{2} = 1$ length unit.
and the length of the hypotenuse $= \frac{3+1}{2} = 2$ length units.

- To draw a line segment with length $\sqrt{5}$ length unit ,
then the length of one of the two sides of
the right-angle $= \frac{5-1}{2} = 2$ length units.
and the length of the hypotenuse $= \frac{5+1}{2} = 3$ length units.

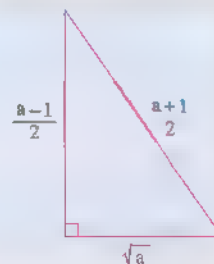

- To draw a line segment with length $\sqrt{6}$ length unit ,
then the length of one side of the right-angle
 $= \frac{6-1}{2} = 2\frac{1}{2}$ length units.
and the length of the hypotenuse $= \frac{6+1}{2} = 3\frac{1}{2}$ length units.

Generally

To draw a line segment with length \sqrt{a} length unit where $a > 1$
, draw a right-angled triangle in which
the length of one side of the right-angle $= \frac{a-1}{2}$ length unit.
and the length of the hypotenuse $= \frac{a+1}{2}$ length unit.

Example 4 Draw a line segment with length $\sqrt{7}$ length unit, then use it to determine the points which represent the following numbers on the number line :

1 $\sqrt{7}$

4 $2 - \sqrt{7}$

2 $-\sqrt{7}$

5 $2\sqrt{7}$

3 $1 + \sqrt{7}$

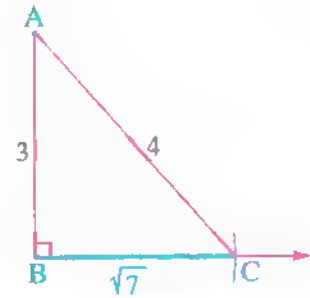

Solution Draw the right-angled triangle ABC at B such that :

$$AB = \frac{7-1}{2} = 3 \text{ length units.}$$

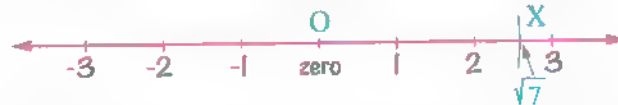

$$\therefore AC = \frac{7+1}{2} = 4 \text{ length units.}$$

$$\therefore \text{then } (BC)^2 = (AC)^2 - (AB)^2 = 16 - 9 = 7$$

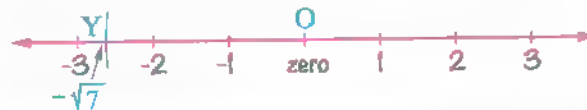

$$\therefore BC = \sqrt{7} \text{ length unit.}$$

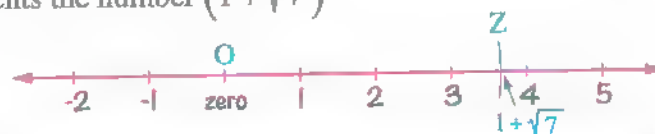

- 1 Using the compasses with a distance equal to the length of BC taking O as a centre, draw an arc to cut the number line on the right side of O at the point X, then X is the point which represents $\sqrt{7}$

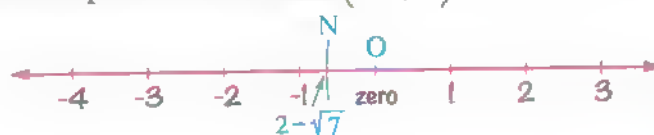

- 2 Using the same previous distance and taking O as a centre, draw an arc to cut the number line on the left side of O at the point Y, then Y is the point which represents the number $-\sqrt{7}$

- 3 Using the same previous distance and taking the point which represents the number 1 on the number line as a centre, draw an arc to cut the number line on the right side of the previous point at Z, then Z represents the number $(1 + \sqrt{7})$

- 4 Using the same previous distance and taking the point which represents the number 2 on the number line as a centre, draw an arc to cut the number line on the left side of this point at the point N, then N is the point which represents the number $(2 - \sqrt{7})$

The set of real numbers

It is the set obtained from the union of the set of rational numbers and the set of irrational numbers. It is denoted by \mathbb{R}

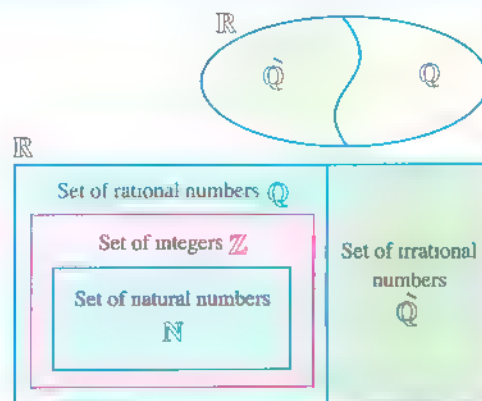

i.e. $\mathbb{R} = \mathbb{Q} \cup \mathbb{Q}^c$ (as shown in the opposite figure)

Noticing that $\mathbb{Q} \cap \mathbb{Q}^c = \emptyset$

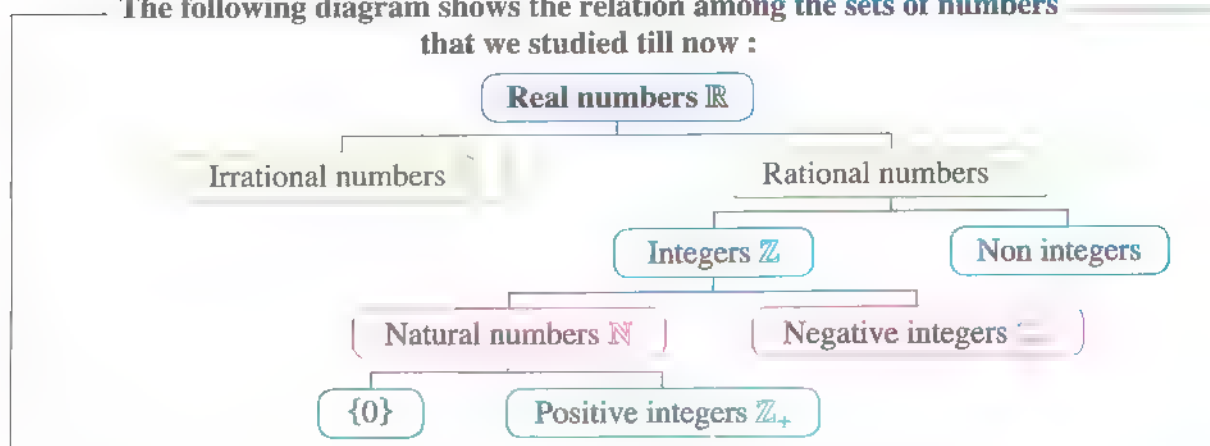

• The opposite Venn diagram shows that :

$$\mathbb{N} \subset \mathbb{Z} \subset \mathbb{Q} \subset \mathbb{R}$$

$$\text{and } \mathbb{Q}^c \subset \mathbb{R}$$

The following diagram shows the relation among the sets of numbers that we studied till now :

Ordering numbers in \mathbb{R}

- Each real number is represented by a unique point on the number line.
- The set of real numbers is an ordered set.
- If the point representing the number x on the number line lies on the left of the point representing the number y as shown in the figure, then $x < y$ or $y > x$

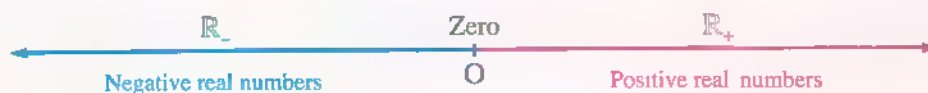

- Each real number represented by a point lying on the right side of the origin O is greater than zero, and all these numbers form a set called “the set of the positive real numbers” denoted by \mathbb{R}_+

$$\mathbb{R}_+ = \{x : x \in \mathbb{R}, x > \text{zero}\}$$

- Each real number represented by a point lying on the left side of the origin O is less than zero and all these numbers form a set called “the set of the negative real numbers” denoted by \mathbb{R}_-

$$\mathbb{R}_- = \{x : x \in \mathbb{R}, x < \text{zero}\}$$

! Remarks

- $\mathbb{R}_+ \cap \mathbb{R}_- = \emptyset$
- $\mathbb{R} = \mathbb{R}_+ \cup \{0\} \cup \mathbb{R}_-$
- The number zero is neither positive nor negative.
- $\mathbb{R}_+ \cup \{0\} = \{x : x \in \mathbb{R}, x \geq 0\}$
and it is called the set of the non-negative real numbers.
- $\mathbb{R}_- \cup \{0\} = \{x : x \in \mathbb{R}, x \leq 0\}$
and it is called the set of the non-positive real numbers.
- The set of real numbers without zero (The non-zero real numbers) is denoted by \mathbb{R}^*
i.e. $\mathbb{R}^* = \mathbb{R} - \{0\} = \mathbb{R}_+ \cup \mathbb{R}_-$

Example 1 Arrange the following numbers ascendingly :

$$\sqrt{75}, \sqrt{68}, -\sqrt{45}, -8, 7 \text{ and } -\sqrt{32}$$

Solution • Arrange the positive numbers which are $\sqrt{75}, \sqrt{68}$ and 7

$$\therefore 7 = \sqrt{49}$$

$$\therefore 49 < 68 < 75 \quad \therefore \sqrt{49} < \sqrt{68} < \sqrt{75}$$

$$\text{i.e. } 7 < \sqrt{68} < \sqrt{75}$$

• Arrange the negative numbers which are $-\sqrt{45}, -8$ and $-\sqrt{32}$

$$\therefore 8 = \sqrt{64}$$

$$\therefore 64 > 45 > 32 \quad \therefore \sqrt{64} > \sqrt{45} > \sqrt{32}$$

$$\therefore -\sqrt{64} < -\sqrt{45} < -\sqrt{32}$$

$$\text{i.e. } -8 < -\sqrt{45} < -\sqrt{32}$$

$$\therefore \text{The ascending order is : } -8, -\sqrt{45}, -\sqrt{32}, 7, \sqrt{68} \text{ and } \sqrt{75}$$

! Remark

You can use the calculator to get the solution by finding approximated values of the roots.

Example 2 Write three irrational numbers included between 11 and 12

Solution $\therefore (11)^2 = 121, (12)^2 = 144$

$$\therefore 125, 126 \text{ and } 130 \text{ are three integers included between } 121 \text{ and } 144$$

$$\therefore 121 < 125 < 126 < 130 < 144$$

$$\therefore \sqrt{121} < \sqrt{125} < \sqrt{126} < \sqrt{130} < \sqrt{144}$$

$$\therefore \text{The required irrational numbers are : } \sqrt{125}, \sqrt{126} \text{ and } \sqrt{130}$$

(Notice that . There are other irrational numbers included between 11 and 12)

Example 3 Find the S.S. in \mathbb{R} for each of the following equations :

1 $3x^2 + 125 = 221$

2 $\frac{1}{6}x^3 - 8 = 28$

3 $2x^2 + 6 = 4$

Solution

1 $\therefore 3x^2 + 125 = 221$

$\therefore 3x^2 = 221 - 125$

$\therefore 3x^2 = 96$

$\therefore x^2 = \frac{96}{3}$

$\therefore x^2 = 32$

$\therefore x = \pm\sqrt{32}$

$\therefore \text{The S.S.} = \{\sqrt{32}, -\sqrt{32}\}$

2 $\therefore \frac{1}{6}x^3 - 8 = 28$

$\therefore \frac{1}{6}x^3 = 36$

$\therefore x^3 = 6 \times 36$

$\therefore x^3 = 216$

$\therefore x = \sqrt[3]{216}$

$\therefore x = 6$

$\therefore \text{The S.S.} = \{6\}$

3 $\therefore 2x^2 + 6 = 4$

$\therefore 2x^2 = 4 - 6$

$\therefore 2x^2 = -2$

$\therefore x^2 = -\frac{2}{2}$

$\therefore x^2 = -1$

$\therefore x = \pm\sqrt{-1}$

$\therefore \sqrt{-1} \notin \mathbb{R}, -\sqrt{-1} \notin \mathbb{R} \therefore \text{The S.S.} = \emptyset$

Complete each of the following using one of the symbols $>$ or $<$:

1 $\sqrt{2} \dots\dots\dots 1$

2 $-\sqrt{3} \dots\dots\dots -1$

3 $\sqrt[3]{9} \dots\dots\dots 3$

4 $-\sqrt[3]{7} \dots\dots\dots -2$

5 $\sqrt{7} \dots\dots\dots 2.6$

6 $-\sqrt[3]{16} \dots\dots\dots -2.52$

$< \text{ 9}$

$< \text{ 3}$

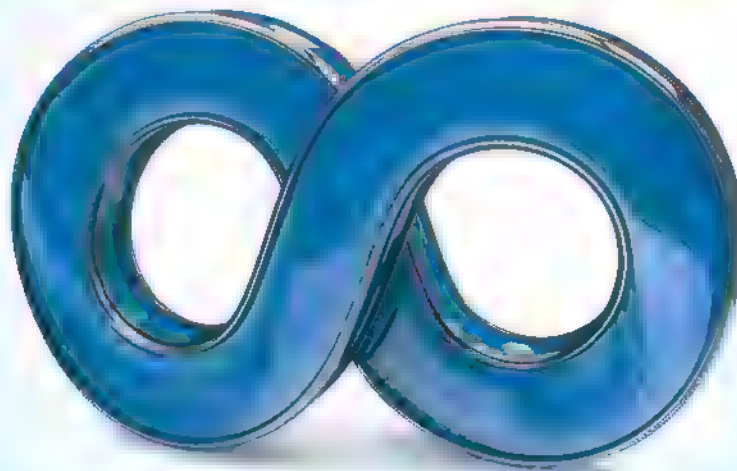

$< \text{ 5}$

$< \text{ 2}$

$< \text{ 4}$

$< \text{ 1}$

Answers of try by yourself

Prelude Through your previous study , you knew different methods to express a subset of the set of natural numbers and a subset of the set of integers and you learnt how to represent them on the number line.

For example:

If X = the set of integers which are greater than or equal to -3 and less than 2

* Then you can express the set X by the description method as follows : $X = \{a : a \in \mathbb{Z}, -3 \leq a < 2\}$

* You can also express it by listing method as follows : $X = \{-3, -2, -1, 0, 1\}$

* The set X is represented on the number line as shown in the figure :

• And now the question is : Is it possible to use the same previous methods to express a subset of the set of real numbers and represent it on the number line ?

Assuming that : K = the set of real numbers that are greater than or equal to -3 and less than 2

* You can express the set K by the description method as follows : $K = \{a : a \in \mathbb{R}, -3 \leq a < 2\}$

* But it is impossible to express the set K by listing method because there are an infinity of real numbers existing between -3 and 2

* For the same reason , it is impossible to represent this set K by separate points on the number line as shown in the previous figure therefore we use another method to express a subset of the set of real numbers , which is the intervals.

• In the following , we will show the types of intervals :

First Limited intervals

A Closed interval

- The set $\{x : x \in \mathbb{R}, -3 \leq x \leq 2\}$ expresses the set of real numbers which consists of the two numbers -3 and 2 and all the real numbers included between them.

We denote it by $[-3, 2]$ and it is called a «closed interval».

- It is represented on the number line as shown in the figure :

Notice that : $-3 \in [-3, 2]$, $2 \in [-3, 2]$

We express this by drawing two shaded circles at the two points representing the two numbers -3 and 2

Notice that :

The smaller number must be written first when you write the interval.

B Opened interval

- The set $\{x : x \in \mathbb{R}, -3 < x < 2\}$ expresses the set of real numbers included between the two numbers -3 and 2 such that the two numbers -3 and 2 are not contained in this set.

We denote this set by $] -3, 2[$ and it is called an «opened interval».

- It is represented on the number line as in the figure :

Notice that : $-3 \notin] -3, 2[$ and $2 \notin] -3, 2[$

We express this by drawing two unshaded circles at the two points representing the two numbers -3 and 2

C Half opened interval (Half closed interval)

- The set $\{x : x \in \mathbb{R}, -3 \leq x < 2\}$ expresses the number -3 and all the real numbers included between -3 and 2 without the number 2 , we denote it by $[-3, 2[$ and it is called a «half opened interval» or «half closed interval».

- It is represented on the number line as in the figure :

Notice that : $-3 \in [-3, 2[$, $2 \notin [-3, 2[$

- The set $\{x : x \in \mathbb{R}, -3 < x \leq 2\}$ expresses the number 2 and all the real numbers included between -3 and 2 without the number -3 , we denote it by $] -3, 2]$ and it is called a «half opened interval» or «half closed interval».

- It is represented on the number line as in the figure :

Notice that : $-3 \notin] -3, 2]$, $2 \in] -3, 2]$

Unlimited intervals

- 1 • The set $\{x : x \in \mathbb{R}, x \geq 2\}$ expresses the set of real numbers which consists of the number 2 and all the real numbers which are greater than 2 with no end.

It is denoted by $[2, \infty[$ where the symbol « ∞ » is read as **positive infinity** and it doesn't represent a real number

- It is represented on the number line as shown in the figure :

Notice that : $2 \in [2, \infty[$

- 2 • The set $\{x : x \in \mathbb{R}, x > 2\}$ expresses the set of all real numbers which are greater than the number 2 with no end. It is denoted by $]2, \infty[$

- It is represented on the number line as shown in the figure :

Notice that : $2 \notin]2, \infty[$

- 3 • The set $\{x : x \in \mathbb{R}, x \leq 2\}$ expresses the set of real numbers which consists of the number 2 and all the real numbers which are smaller than the number 2 with no end. It is denoted by $]-\infty, 2]$ where the symbol « $-\infty$ » is read as **negative infinity** and it doesn't represent a real number.

- It is represented on the number line as shown in the figure :

Notice that : $2 \in]-\infty, 2]$

- 4 • The set $\{x : x \in \mathbb{R}, x < 2\}$ expresses the set of all real numbers which are smaller than the number 2 with no end. It is denoted by $]-\infty, 2[$

- It is represented on the number line as shown in the figure :

Notice that : $2 \notin]-\infty, 2[$

- We can express the previous symbolically in the following table assuming that :
 $a \in \mathbb{R}, b \in \mathbb{R}$ and $a < b$

Types of intervals		The interval	Expression by distinguished property	Representation on the number line	Notice that
The limited intervals	Closed	$[a, b]$	$\{x : x \in \mathbb{R}, a \leq x \leq b\}$		<ul style="list-style-type: none">$a \in [a, b]$$b \in [a, b]$
	Opened	$]a, b[$	$\{x : x \in \mathbb{R}, a < x < b\}$		<ul style="list-style-type: none">$a \notin]a, b[$$b \notin]a, b[$
	half opened (half closed)	$[a, b[$	$\{x : x \in \mathbb{R}, a \leq x < b\}$		<ul style="list-style-type: none">$a \in [a, b[$$b \notin [a, b[$
		$]a, b]$	$\{x : x \in \mathbb{R}, a < x \leq b\}$		<ul style="list-style-type: none">$a \notin]a, b]$$b \in]a, b]$
The unlimited intervals	$[a, \infty[$	$\{x : x \in \mathbb{R}, x \geq a\}$		$a \in [a, \infty[$	
	$]a, \infty[$	$\{x : x \in \mathbb{R}, x > a\}$		$a \notin]a, \infty[$	
	$]-\infty, a]$	$\{x : x \in \mathbb{R}, x \leq a\}$		$a \in]-\infty, a]$	
	$]-\infty, a[$	$\{x : x \in \mathbb{R}, x < a\}$		$a \notin]-\infty, a[$	

! Remarks

- $\mathbb{R} =]-\infty, \infty[$
- $\mathbb{R}_+ =]0, \infty[$
- $\mathbb{R}_- =]-\infty, 0[$
- The set of non-negative real numbers $= \mathbb{R}_+ \cup \{0\} = [0, \infty[$
- The set of non-positive real numbers $= \mathbb{R}_- \cup \{0\} =]-\infty, 0]$

Example 1 Write each of the following sets in the form of an interval, then represent it on the number line :

- $\{x : x \in \mathbb{R}, -3 < x \leq 0\}$
- $\{a : a \in \mathbb{R}, 1 \geq a \geq -2\}$
- $\{x : x \in \mathbb{R}, x > 0\}$
- $\{y : y \in \mathbb{R}, -1 \geq y\}$

Solution

1 $]-3, 0]$

2 $[-2, 1]$

3 $]0, \infty[$

4 $]-\infty, -1]$

**1**

- 1 Write each of the following in an interval form, then represent it on the number line :

1 $\{x : x \in \mathbb{R}, -4 < x \leq 2\}$

2 $\{y : y \in \mathbb{R}, y \geq -5\}$

- 2 Represent each of the following on the number line and express it by the description method :

1 $]-3, 0[$

2 $]-\infty, 2]$

Example 2

Choose the correct answer from those given :

1 $4 \in$

(a) $]4, 7[$

(b) $[-4, 4[$

(c) $]2, 5[$

(d) $[-11, -4]$

2 $\sqrt[3]{-8} \dots [-8, -2[$

(a) \in

(b) \notin

(c) \subset

(d) $\not\subset$

3 $\{1, 6\} \dots]1, 6]$

(a) \in

(b) \notin

(c) \subset

(d) $\not\subset$

4 If $x \in [-5, \infty[$, then

(a) $x > -5$

(b) $x \geq -5$

(c) $x < -5$

(d) $x \leq -5$

5 The sum of the real numbers in the interval $[-3, 3[$ is

(a) -6

(b) -3

(c) zero

(d) 6

Solution

1 (c)

2 (b) The reason : $\because \sqrt[3]{-8} = -2$, $[-8, -2[$ is open at -2

$$\therefore -2 \notin [-8, -2[$$

3 (d) The reason : $1 \notin]1, 6]$ because the interval is open at 1

4 (b)

5 (b) The reason : Each number belongs to the interval has its additive inverse except -3 because $3 \notin [-3, 3[$

TRY 2

Complete using one of the symbols \in, \notin, \subset or $\not\subset$:

1 $-1 \dots\dots [-4, -1[$

2 $\frac{1}{2} \dots\dots]0, 1[$

3 $\{2, 4\} \dots\dots [2, 5[$

4 $\sqrt{7} \dots\dots]2, 3]$

5 $\{-1, 0, 1\} \dots\dots [0, 1]$

6 $|-5| \dots\dots]-\infty, 0]$

Operations on intervals

You studied before the sets and how to carry out the operations of intersection , union , difference and complement on them.

For example:

If $X = \{1, 2, 3, 4\}$, $Y = \{3, 4, 5, 6\}$, then :

- $X \cap Y$ = the set of elements which are common in X and $Y = \{3, 4\}$
- $X \cup Y$ = the set of all elements in X or Y without repeating = $\{1, 2, 3, 4, 5, 6\}$
- $X - Y$ = the set of elements which are in X and not in $Y = \{1, 2\}$
- $Y - X$ = the set of elements which are in Y and not in $X = \{5, 6\}$
- If the universal set $U = \{1, 2, 3, 4, 5, 6, 7\}$,

then the complement of X which is denoted by $\bar{X} = U - X$

i.e. \bar{X} = the set of elements which are in U and not in $X = \{5, 6, 7\}$

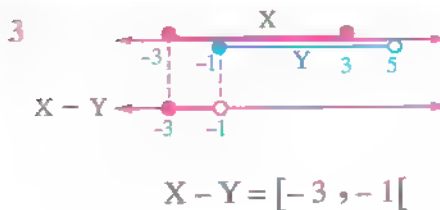

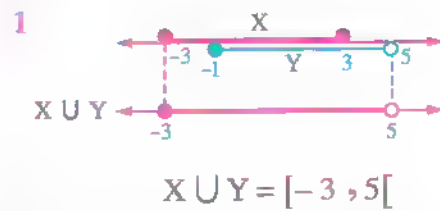

The following examples show how to carry out the operations of intersection , union and difference on intervals :

Example 3 If $X = [-3, 3]$ and $Y = [-1, 5[$, find using the number line :

1 $X \cup Y$

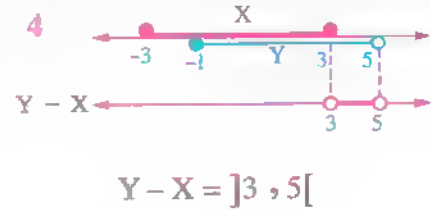

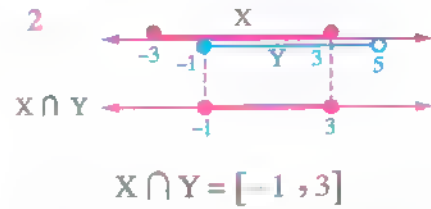

3 $X - Y$

Solution

2 $X \cap Y$

4 $Y - X$

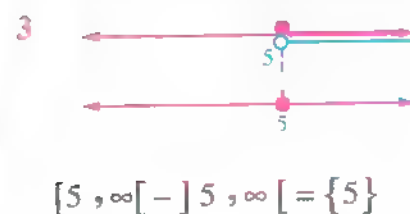

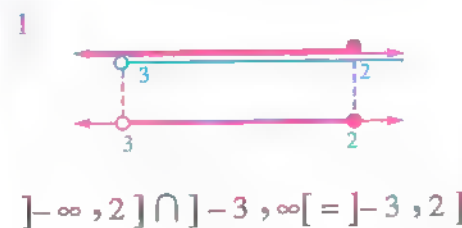

Example 4 Find each of the following :

1 $] -\infty, 2] \cap] -3, \infty [$

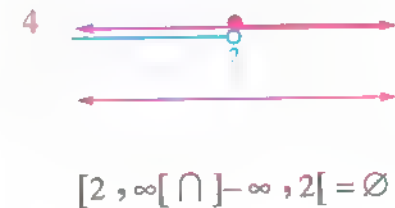

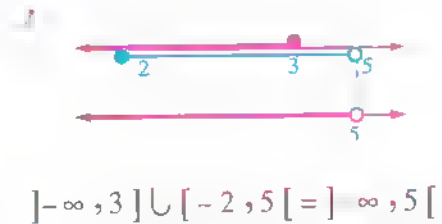

3 $[5, \infty [-] 5, \infty [$

Solution

2 $] -\infty, 3] \cup [-2, 5 [$

4 $[2, \infty [\cap] -\infty, 2 [$

Example 5 If $X =]-\infty, 2[$ and $Y = [-1, 5]$, find using the number line :

1 $X \cup Y$

3 $X - Y$

5 \bar{X}

2 $X \cap Y$

4 $Y - X$

6 \bar{Y}

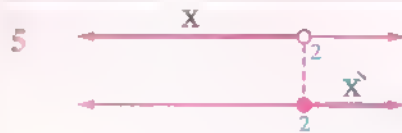

Solution

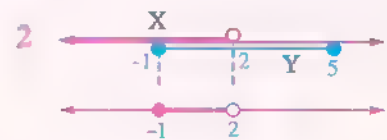

$$X \cup Y =]-\infty, 5]$$

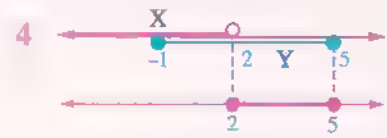

$$X - Y =]-\infty, -1[$$

$$\bar{X} = [2, \infty[$$

$$X \cap Y = [-1, 2[$$

$$Y - X = [2, 5]$$

$$\bar{Y} =]-\infty, -1[\cup]5, \infty[\\ = \mathbb{R} - [-1, 5]$$

Example 6 If $X = [1, 4[$ and $Y = \{1, 4\}$, find :

1 $X \cap Y$

3 $X - Y$

2 $X \cup Y$

4 $Y - X$

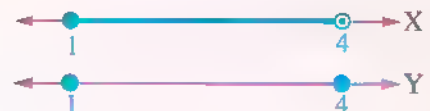

Solution

1 $X \cap Y = \{1\}$

2 $X \cup Y = [1, 4]$

3 $X - Y =]1, 4[$

4 $Y - X = \{4\}$

TRY 3

If $X = [-1, 3[$ and $Y =]0, 4]$, find using the number line :

- | | | |
|-------------------|--------------|-----------------------------------|
| 1 $X \cap Y$ | 2 $X \cup Y$ | 3 $X - [0, \infty[$ |
| 4 $]0, \infty[-Y$ | 5 X^c | 6 $X \cap \{-2, -1, 0, 1, 2, 3\}$ |

Operations on the real numbers

First Addition

- We know that $2x$ and $3x$ are two like algebraic terms and their sum is an algebraic term like them.

Where $2x + 3x = (2 + 3)x = 5x$

Then we deduce that : $2\sqrt{5} + 3\sqrt{5} = (2 + 3)\sqrt{5} = 5\sqrt{5}$

Remember that

The real number $2\sqrt{5}$ is produced by multiplying the rational number 2 by the irrational number $\sqrt{5}$

- We know that $2x$ and $3y$ are two unlike algebraic terms and we express their sum by an algebraic expression whose simplest form is $2x + 3y$

Therefore we deduce that :

The two real numbers $2\sqrt{3}$ and $3\sqrt{2}$, their sum is expressed by a real number whose simplest form is $2\sqrt{3} + 3\sqrt{2}$

Properties of addition of real numbers

Closure

For every $a \in \mathbb{R}$ and $b \in \mathbb{R}$ we find that $(a + b) \in \mathbb{R}$

i.e. The sum of any two real numbers is a real number, therefore we say \mathbb{R} is closed under addition.

For example: $\sqrt{5} \in \mathbb{R}$ and $2\sqrt{5} \in \mathbb{R}$, we find that : $\sqrt{5} + 2\sqrt{5} = 3\sqrt{5} \in \mathbb{R}$

Commutative property

For every $a \in \mathbb{R}$ and $b \in \mathbb{R}$ it will be $a + b = b + a$

For example: $5\sqrt[3]{2} + 4\sqrt[3]{2} = 9\sqrt[3]{2}$, $4\sqrt[3]{2} + 5\sqrt[3]{2} = 9\sqrt[3]{2}$

$$\text{i.e. } 5\sqrt[3]{2} + 4\sqrt[3]{2} = 4\sqrt[3]{2} + 5\sqrt[3]{2}$$

Associative property

For every $a \in \mathbb{R}$, $b \in \mathbb{R}$ and $c \in \mathbb{R}$ it will be $(a + b) + c = a + (b + c) = a + b + c$

For example: $(\sqrt{3} + 2\sqrt{3}) + 5\sqrt{3} = 3\sqrt{3} + 5\sqrt{3} = 8\sqrt{3}$,

$$\sqrt{3} + (2\sqrt{3} + 5\sqrt{3}) = \sqrt{3} + 7\sqrt{3} = 8\sqrt{3}$$

$$\text{i.e. } (\sqrt{3} + 2\sqrt{3}) + 5\sqrt{3} = \sqrt{3} + (2\sqrt{3} + 5\sqrt{3})$$

The additive neutral

For every $a \in \mathbb{R}$ it will be $a + 0 = 0 + a = a$

i.e. Zero is the additive neutral.

For example: $\sqrt{2} + 0 = 0 + \sqrt{2} = \sqrt{2}$, $-\sqrt[3]{5} + 0 = 0 + (-\sqrt[3]{5}) = -\sqrt[3]{5}$

The additive inverse of every real number

For every $a \in \mathbb{R}$ there is $(-a) \in \mathbb{R}$ where $a + (-a) = \text{zero (the additive neutral)}$

For example: • The additive inverse of $\sqrt{3}$ is $-\sqrt{3}$ and vice versa because $\sqrt{3} + (-\sqrt{3}) = 0$

• The additive inverse of $2 + \sqrt{5}$ is $-(2 + \sqrt{5})$ and equals $-2 - \sqrt{5}$

• The additive inverse of $3 - \sqrt{2}$ is $-(3 - \sqrt{2})$ and equals $\sqrt{2} - 3$

• The additive inverse of zero is itself.

! Remark

Since every real number has an additive inverse , then the subtraction operation is possible entirely in \mathbb{R} , and it is defined as follows :

For every $a \in \mathbb{R}$ and $b \in \mathbb{R}$ it will be $a - b = a + (-b)$

i.e. The subtraction operation $(a - b)$ means adding the number a to the additive inverse of the number b

And we can deduce that :

Subtraction operation in \mathbb{R} is not commutative and it is not associative.

Example 1

Choose the correct answer from those given :

1 $\sqrt{7} + \sqrt{7} =$

(a) $\sqrt{14}$

(b) $2\sqrt{7}$

(c) 7

(d) 14

2 $2\sqrt{2} - 3\sqrt{2} =$

(a) -1

(b) $-\sqrt{2}$

(c) $\sqrt{2}$

(d) $5\sqrt{2}$

3 $4 + \sqrt{3} - 7 - \sqrt{3} = \dots\dots\dots$

(a) $-3 - 2\sqrt{3}$

(b) $-3 + 2\sqrt{3}$

(c) -3

(d) 3

4 If $X = 9\sqrt{5}$, $y = 5\sqrt{3}$, then $X - y = \dots\dots\dots$

(a) $4\sqrt{2}$

(b) $4\sqrt{5}$

(c) $4\sqrt{3}$

(d) $9\sqrt{5} - 5\sqrt{3}$

5 The additive inverse of $\sqrt{7} - \sqrt{5}$ is $\dots\dots\dots$

(a) $-\sqrt{7} - \sqrt{5}$

(b) $\sqrt{7} + \sqrt{5}$

(c) $\sqrt{5} - \sqrt{7}$

(d) $\sqrt{7} - \sqrt{5}$

6 If $\sqrt{2} + X = 0$, then $X - \sqrt{2} = \dots\dots\dots$

(a) zero

(b) $-\sqrt{2}$

(c) $-2\sqrt{2}$

(d) $2\sqrt{2}$

Solution

1 (b)

2 (b) The reason : $2\sqrt{2} - 3\sqrt{2} = (2 - 3)\sqrt{2} = -\sqrt{2}$

3 (c) The reason : $4 + \sqrt{3} - 7 - \sqrt{3} = (4 - 7) + (\sqrt{3} - \sqrt{3}) = -3 + 0 = -3$

4 (d) The reason : $X - y = 9\sqrt{5} - 5\sqrt{3}$ and this is the simplest form of the difference.

5 (c) The reason : The additive inverse of $\sqrt{7} - \sqrt{5}$ is $-(\sqrt{7} - \sqrt{5})$
which is $-\sqrt{7} + \sqrt{5}$ or $\sqrt{5} - \sqrt{7}$

6 (c) The reason : X is the additive inverse of $\sqrt{2}$ which is $-\sqrt{2}$
 $\therefore X - \sqrt{2} = -\sqrt{2} - \sqrt{2} = -2\sqrt{2}$

TRY 1

1 Write the additive inverse for each of the following numbers :

$\sqrt{2}, -\sqrt[3]{5}, \sqrt{2} + \sqrt{7}, \sqrt[3]{5} - 3, -\sqrt{6} - \sqrt[3]{7}$

2 Simplify to the simplest form :

1 $2 + 2\sqrt{7} - 1 - 5\sqrt{7}$

2 $3\sqrt{5} + \sqrt{3} - 3\sqrt{5} + 5\sqrt{3}$

Second Multiplication

- We know that : $3 \times 2 \mathcal{X} = (3 \times 2) \mathcal{X} = 6 \mathcal{X}$

Therefore we find that : $3 \times 2\sqrt{3} = (3 \times 2)\sqrt{3} = 6\sqrt{3}$

- We know also $2\mathcal{X} \times 5\mathcal{X} = (2 \times 5)(\mathcal{X} \times \mathcal{X}) = 10 \mathcal{X}^2$

Therefore we find that : $2\sqrt{3} \times 5\sqrt{3} = (2 \times 5) \times (\sqrt{3} \times \sqrt{3}) = 10 (\sqrt{3})^2 = 10 \times 3 = 30$

Example 2 Find the result of each of the following :

1 $-2 \times 3\sqrt{5}$

2 $4\sqrt{2} \times \sqrt{2}$

3 $-2\sqrt{7} \times 4\sqrt{7}$

Solution 1 $-2 \times 3\sqrt{5} = (-2 \times 3) \sqrt{5} = -6\sqrt{5}$

2 $4\sqrt{2} \times \sqrt{2} = 4 (\sqrt{2})^2 = 4 \times 2 = 8$

3 $-2\sqrt{7} \times 4\sqrt{7} = (-2 \times 4) \times (\sqrt{7})^2 = -8 \times 7 = -56$

Properties of multiplication of real numbers**Closure**

For every $a \in \mathbb{R}$ and $b \in \mathbb{R}$ it will be $a \times b \in \mathbb{R}$

i.e. The product of any two real numbers is a real number therefore we say :

\mathbb{R} is closed under multiplication.

For example: $\sqrt{3} \in \mathbb{R}$ and $2\sqrt{3} \in \mathbb{R}$

We find that : $\sqrt{3} \times 2\sqrt{3} = 2 \times 3 = 6 \in \mathbb{R}$

Commutative property

For every $a \in \mathbb{R}$ and $b \in \mathbb{R}$ it will be $a \times b = b \times a$

For example: $2\sqrt{5} \times 3\sqrt{5} = 6 \times 5 = 30$, $3\sqrt{5} \times 2\sqrt{5} = 6 \times 5 = 30$

i.e. $2\sqrt{5} \times 3\sqrt{5} = 3\sqrt{5} \times 2\sqrt{5}$

Associative property

For every $a \in \mathbb{R}$, $b \in \mathbb{R}$ and $c \in \mathbb{R}$ it will be $(a \times b) \times c = a \times (b \times c) = a \times b \times c$

For example: $(2\sqrt{7} \times 4\sqrt{7}) \times \sqrt{7} = 56 \times \sqrt{7} = 56\sqrt{7}$,

$2\sqrt{7} \times (4\sqrt{7} \times \sqrt{7}) = 2\sqrt{7} \times 28 = 56\sqrt{7}$

i.e. $(2\sqrt{7} \times 4\sqrt{7}) \times \sqrt{7} = 2\sqrt{7} \times (4\sqrt{7} \times \sqrt{7})$

The multiplicative neutral

For every $a \in \mathbb{R}$ it will be $a \times 1 = 1 \times a = a$

i.e. One is the multiplicative neutral in \mathbb{R}

For example: $\sqrt[3]{5} \times 1 = 1 \times \sqrt[3]{5} = \sqrt[3]{5}$

The multiplicative inverse of any non-zero real number

For every real number $a \neq 0$, there is a real number $\frac{1}{a}$ where $a \times \frac{1}{a} = 1$ which is the multiplicative neutral.

For example:

- The multiplicative inverse of $\sqrt{3}$ is $\frac{1}{\sqrt{3}}$
because $\sqrt{3} \times \frac{1}{\sqrt{3}} = 1$
- The multiplicative inverse of $-\frac{\sqrt{2}}{5}$ is $-\frac{5}{\sqrt{2}}$
- The multiplicative inverse of 1 is itself
and also the multiplicative inverse of -1 is itself.

Notice that :

- Both the number and its multiplicative inverse have the same sign.
- There is no multiplicative inverse for zero because $\frac{1}{\text{zero}}$ is meaningless (**i.e.** Undefined)

! Remark

Since each non-zero real number has a multiplicative inverse, then the division operation by any real number does not equal zero is possible in \mathbb{R} and it is defined as follows

For every $a \in \mathbb{R}$ and $b \in \mathbb{R}^*$ it will be $a \div b = a \times \frac{1}{b}$

i.e. The division operation $(a \div b)$ means multiplying the number a by the multiplicative inverse of the number b such that $b \neq 0$

And we can deduce that :

Division operation in \mathbb{R} is not commutative and it is not associative.

Example 3 Find the result of : $\frac{\sqrt{5}}{5} \times \frac{4\sqrt{5}}{12\sqrt{2}} \div \frac{1}{3\sqrt{2}}$

Solution $\left(\frac{\sqrt{5}}{5} \times \frac{4\sqrt{5}}{12\sqrt{2}} \right) \div \frac{1}{3\sqrt{2}} = \frac{5}{15\sqrt{2}} \div \frac{1}{3\sqrt{2}} = \frac{1}{3\sqrt{2}} \times 3\sqrt{2} = 1$

Example 4 Write each of the following such that the denominator is an integer :

1 $\frac{9}{\sqrt{3}}$

2 $-\frac{3}{\sqrt{2}}$

3 $\frac{5}{3\sqrt{5}}$

Solution 1 Multiplying the two terms of $\frac{9}{\sqrt{3}}$ by $\sqrt{3}$

$$\therefore \text{we get } \frac{9}{\sqrt{3}} = \frac{9}{\sqrt{3}} \times \frac{\sqrt{3}}{\sqrt{3}} = \frac{9\sqrt{3}}{3} = 3\sqrt{3}$$

Notice that : $\frac{\sqrt{3}}{\sqrt{3}} = 1$ “The multiplicative neutral”

$$\therefore -\frac{3}{\sqrt{2}} = -\frac{3}{\sqrt{2}} \times \frac{\sqrt{2}}{\sqrt{2}} = -\frac{3\sqrt{2}}{2}$$

$$3 \quad \frac{5}{3\sqrt{5}} = \frac{5}{3\sqrt{5}} \times \frac{\sqrt{5}}{\sqrt{5}} = \frac{5\sqrt{5}}{3 \times 5} = \frac{\sqrt{5}}{3}$$

Another solution :

$$\because \sqrt{5} \times \sqrt{5} = 5 \quad \therefore \frac{5}{3\sqrt{5}} = \frac{\sqrt{5} \times \sqrt{5}}{3\sqrt{5}} = \frac{\sqrt{5}}{3}$$

Example 5 Choose the correct answer from those given :

1 The multiplicative inverse of $\frac{\sqrt{5}}{10}$ is

(a) $\sqrt{10}$

(b) $\sqrt{5}$

(c) $2\sqrt{5}$

(d) $-2\sqrt{5}$

2 The additive inverse of $\frac{7}{\sqrt{7}}$ is

(a) $\frac{\sqrt{7}}{7}$

(b) 7

(c) $-\sqrt{7}$

(d) -7

3 The multiplicative inverse of $\frac{3\sqrt{2}}{4}$ equals $\frac{\dots\dots\dots}{3}$

(a) $4\sqrt{2}$

(b) $2\sqrt{2}$

(c) $\sqrt{2}$

(d) $\frac{4}{3\sqrt{2}}$

Solution

- 1 (c) **The reason :** The multiplicative inverse of $\frac{\sqrt{5}}{10}$

$$\text{is } \frac{10}{\sqrt{5}} = \frac{10}{\sqrt{5}} \times \frac{\sqrt{5}}{\sqrt{5}} = \frac{10\sqrt{5}}{5} = 2\sqrt{5}$$

- 2 (c) **The reason :** The additive inverse of $\frac{7}{\sqrt{7}}$

$$\text{is } -\frac{7}{\sqrt{7}} = -\frac{7}{\sqrt{7}} \times \frac{\sqrt{7}}{\sqrt{7}} = -\frac{7\sqrt{7}}{7} \\ = -\sqrt{7}$$

- 3 (b) **The reason :** The multiplicative inverse of $\frac{3\sqrt{2}}{4}$

$$\text{is } \frac{4}{3\sqrt{2}} = \frac{4}{3\sqrt{2}} \times \frac{\sqrt{2}}{\sqrt{2}} = \frac{4\sqrt{2}}{6} \\ = \frac{2\sqrt{2}}{3}$$

TRY 2

- 1 Find each of the following :

1 $\sqrt{5} \times \frac{1}{\sqrt{5}} \times \sqrt{5}$

2 $\frac{\sqrt{3}}{3} \times \frac{4\sqrt{5}}{20} \times \frac{5\sqrt{3}}{\sqrt{5}}$

- 2 Make the denominator an integer :

1 $\frac{3}{\sqrt{7}}$

2 $\frac{9}{2\sqrt{6}}$

Distributing multiplication on addition and subtraction

For any three real numbers a , b and c it will be :

• $a(b \pm c) = ab \pm ac$

• $(b \pm c)a = ba \pm ca$

WATCH VIDEO

Example 6 Find each of the following :

1 $2\sqrt{3}(5\sqrt{3}-4)$

2 $(2+\sqrt{3})(\sqrt{3}+7)$

3 $(7\sqrt{2}-5)(7\sqrt{2}+5)$

4 $(5\sqrt{3}-2)^2$

Solution

$$1 \quad 2\sqrt{3} (5\sqrt{3} - 4) = 2\sqrt{3} \times 5\sqrt{3} + 2\sqrt{3} \times (-4)$$

$$= 10 \times 3 - 8 \times \sqrt{3} = 30 - 8\sqrt{3}$$

$$2 \quad (2 + \sqrt{3})(\sqrt{3} + 7) = 2(\sqrt{3} + 7) + \sqrt{3}(\sqrt{3} + 7)$$

$$= 2 \times \sqrt{3} + 2 \times 7 + \sqrt{3} \times \sqrt{3} + \sqrt{3} \times 7$$

$$= 2\sqrt{3} + 14 + 3 + 7\sqrt{3}$$

$$= (2\sqrt{3} + 7\sqrt{3}) + (14 + 3) = 9\sqrt{3} + 17$$

$$3 \quad (7\sqrt{2} - 5)(7\sqrt{2} + 5) = 98 + 35\sqrt{2} - 35\sqrt{2} - 25 = 73$$

Another solution by multiplying by inspection:

$$(7\sqrt{2} - 5)(7\sqrt{2} + 5) = (7\sqrt{2})^2 - (5)^2$$

$$= 7^2 \times (\sqrt{2})^2 - 5^2$$

$$= 49 \times 2 - 25 = 98 - 25 = 73$$

Notice that :

$$(a + b)(a - b) = a^2 - b^2$$

4 Multiplying by inspection

$$\therefore (5\sqrt{3} - 2)^2 = (5\sqrt{3})^2 - 2 \times 5\sqrt{3} \times 2 + (-2)^2$$

$$= 5^2 \times (\sqrt{3})^2 - 20\sqrt{3} + 4$$

$$= 25 \times 3 - 20\sqrt{3} + 4$$

$$= 75 - 20\sqrt{3} + 4 = 79 - 20\sqrt{3}$$

Notice that :

$$\bullet (a + b)^2 = a^2 + 2ab + b^2$$

$$\bullet (a - b)^2 = a^2 - 2ab + b^2$$

Example 7

If $x = 5\sqrt{3} - 2$, $y = 5\sqrt{3} + 2$

, find the value of the expression : $x^2 + 2xy + y^2$

Solution From multiplying by inspection we find that

$$(x + y)^2 = x^2 + 2xy + y^2$$

$$\therefore x^2 + 2xy + y^2 = (5\sqrt{3} - 2 + 5\sqrt{3} + 2)^2$$

$$= (10\sqrt{3})^2 = (10)^2 \times (\sqrt{3})^2 = 100 \times 3 = 300$$

Example 8 Give an estimation for the result of :

$(5 + \sqrt{10})(3 - \sqrt[3]{7})$, then check your answer using the calculator.

Solution First : The estimation of $\sqrt{10}$ is 3 (because $\sqrt{9} = 3$)

\therefore The estimation of $(5 + \sqrt{10})$ is $5 + 3 = 8$

, the estimation of $\sqrt[3]{7}$ is 2 (because $\sqrt[3]{8} = 2$)

\therefore The estimation of $(3 - \sqrt[3]{7})$ is $3 - 2 = 1$

\therefore The estimation of $(5 + \sqrt{10})(3 - \sqrt[3]{7})$ is $8 \times 1 = 8$

Second : By using the calculator, we find that the result approximated to the nearest thousandths is 8.873

i.e. The estimation is accepted.

TRY 3

1 Find the result of each of the following in the simplest form :

1 $5\sqrt{2}(3\sqrt{2} - 2)$

2 $(2\sqrt{3} - 3)(2\sqrt{3} + 3)$

2 If $x = 2\sqrt{3} - 1$ and $y = 2\sqrt{3} + 1$

, find the value of the expression : $x^2 - 2xy + y^2$

3 Give an estimation for the result of : $(1 + \sqrt{15})(4 - \sqrt{8})$

, then check your answer by using the calculator.

3 5 (Check by yourself)

2 (1) $1 - 3\sqrt{7}$ (2) $6\sqrt{3}$

1 $-\sqrt{2}, -\sqrt{5}, -\sqrt{2} - \sqrt{7}, -\sqrt{5} + 3, \sqrt{6} + \sqrt{7}$

of try by yourself

Operations on the square roots

If a and b are two non negative real numbers , then :

$$\mathbf{1} \quad \sqrt{a} \times \sqrt{b} = \sqrt{ab}$$

For example: • $\sqrt{3} \times \sqrt{12} = \sqrt{36} = 6$

• $\sqrt{50} = \sqrt{25 \times 2} = \sqrt{25} \times \sqrt{2} = 5\sqrt{2}$

$$\mathbf{2} \quad \frac{\sqrt{a}}{\sqrt{b}} = \sqrt{\frac{a}{b}} \quad (\text{where } b \neq 0)$$

For example: • $\frac{\sqrt{8}}{\sqrt{2}} = \sqrt{\frac{8}{2}} = \sqrt{4} = 2$

• $\sqrt{\frac{16}{49}} = \frac{\sqrt{16}}{\sqrt{49}} = \frac{4}{7}$

$$\mathbf{3} \quad \frac{\sqrt{a}}{\sqrt{b}} = \frac{\sqrt{a}}{\sqrt{b}} \times \frac{\sqrt{b}}{\sqrt{b}} = \frac{\sqrt{ab}}{b} \quad (\text{where } b \neq 0)$$

This operation is carried out to make the denominator an integer.

For example: • $\frac{\sqrt{2}}{\sqrt{5}} = \frac{\sqrt{2}}{\sqrt{5}} \times \frac{\sqrt{5}}{\sqrt{5}} = \frac{\sqrt{10}}{5}$

• $\sqrt{\frac{3}{2}} = \frac{\sqrt{3}}{\sqrt{2}} = \frac{\sqrt{3}}{\sqrt{2}} \times \frac{\sqrt{2}}{\sqrt{2}} = \frac{\sqrt{6}}{2}$

! Remarks

① $\sqrt{a^2 + b^2} \neq a + b$, $\sqrt{a^2 - b^2} \neq a - b$

For example:

• $\sqrt{6^2 + 8^2} \neq 6 + 8$ because $\sqrt{6^2 + 8^2} = \sqrt{100} = 10$

• $\sqrt{25 - 9} \neq 5 - 3$ because $\sqrt{25 - 9} = \sqrt{16} = 4$

② $a\sqrt{b} = \sqrt{a^2 b}$

For example:

• $2\sqrt{\frac{1}{2}} = \sqrt{4 \times \frac{1}{2}} = \sqrt{2}$

• $15\sqrt{\frac{1}{3}} = 5 \times 3\sqrt{\frac{1}{3}} = 5\sqrt{9 \times \frac{1}{3}} = 5\sqrt{3}$

Example 1 Write each of the following in the form $a\sqrt{b}$ where a and b are two integers , b is the least possible value :

1 $\sqrt{27}$

2 $5\sqrt{54}$

3 $3\sqrt{\frac{2}{3}}$

4 $\frac{\sqrt{84}}{\sqrt{7}}$

Solution 1 $\sqrt{27} = \sqrt{9 \times 3}$

$$= \sqrt{9} \times \sqrt{3} = 3\sqrt{3}$$

2 $5\sqrt{54} = 5\sqrt{9 \times 6} = 5 \times \sqrt{9} \times \sqrt{6}$

$$= 5 \times 3 \times \sqrt{6} = 15\sqrt{6}$$

3 $3\sqrt{\frac{2}{3}} = 3 \times \frac{\sqrt{2}}{\sqrt{3}} = 3 \times \frac{\sqrt{2}}{\sqrt{3}} \times \frac{\sqrt{3}}{\sqrt{3}} = 3 \times \frac{\sqrt{6}}{3} = \sqrt{6}$

Another solution :

3 $\sqrt{\frac{2}{3}} = \sqrt{3^2 \times \frac{2}{3}} = \sqrt{3 \times 2} = \sqrt{6}$

4 $\frac{\sqrt{84}}{\sqrt{7}} = \sqrt{\frac{84}{7}} = \sqrt{12} = \sqrt{4 \times 3} = \sqrt{4} \times \sqrt{3} = 2\sqrt{3}$

Example 2 Simplify to the simplest form :

1 $\sqrt{45} - 2\sqrt{20} + 2\sqrt{5}$

2 $2\sqrt{18} + \sqrt{50} - 42\sqrt{\frac{1}{2}}$

3 $2\sqrt{27} - 3\sqrt{\frac{1}{3}} - \frac{6}{\sqrt{3}}$

Solution

$$\begin{aligned}\sqrt{45} - 2\sqrt{20} + 2\sqrt{5} &= \sqrt{9 \times 5} - 2\sqrt{4 \times 5} + 2\sqrt{5} \\ &= \sqrt{9} \times \sqrt{5} - 2 \times \sqrt{4} \times \sqrt{5} + 2\sqrt{5} \\ &= 3\sqrt{5} - 2 \times 2\sqrt{5} + 2\sqrt{5} \\ &= 3\sqrt{5} - 4\sqrt{5} + 2\sqrt{5} = \sqrt{5}\end{aligned}$$

$$\begin{aligned}2\sqrt{18} + \sqrt{50} - 42\sqrt{\frac{1}{2}} &= 2\sqrt{9 \times 2} + \sqrt{25 \times 2} - 42 \times \frac{\sqrt{1}}{\sqrt{2}} \\ &= 2 \times \sqrt{9} \times \sqrt{2} + \sqrt{25} \times \sqrt{2} - 42 \times \frac{1}{\sqrt{2}} \times \frac{\sqrt{2}}{\sqrt{2}} \\ &= 2 \times 3\sqrt{2} + 5\sqrt{2} - 21\sqrt{2} = 10\sqrt{2}\end{aligned}$$

$$\begin{aligned}2\sqrt{27} - 3\sqrt{\frac{1}{3}} - \frac{6}{\sqrt{3}} &= 2\sqrt{9 \times 3} - 3 \times \frac{\sqrt{1}}{\sqrt{3}} \times \frac{\sqrt{3}}{\sqrt{3}} - \frac{6}{\sqrt{3}} \times \frac{\sqrt{3}}{\sqrt{3}} \\ &= 6\sqrt{3} - \sqrt{3} - \frac{6\sqrt{3}}{3} \\ &= 6\sqrt{3} - \sqrt{3} - 2\sqrt{3} = 3\sqrt{3}\end{aligned}$$

Example 3 Find the result of each of the following :

1 $2\sqrt{3}(\sqrt{6} + 5)$

2 $(3\sqrt{2} - 5)(3\sqrt{2} + 5)$

3 $(\sqrt{2} + \sqrt{6})^2$

Solution

$$\begin{aligned}2\sqrt{3}(\sqrt{6} + 5) &= 2\sqrt{3} \times \sqrt{6} + 2\sqrt{3} \times 5 \\ &= 2\sqrt{18} + 10\sqrt{3} \\ &= 2\sqrt{9 \times 2} + 10\sqrt{3} \\ &= 6\sqrt{2} + 10\sqrt{3}\end{aligned}$$

$$\begin{aligned}(3\sqrt{2} - 5)(3\sqrt{2} + 5) &= (3\sqrt{2})^2 - (5)^2 \\ &= 3^2 \times (\sqrt{2})^2 - (5)^2 \\ &= 9 \times 2 - 25 \\ &= 18 - 25 = -7\end{aligned}$$

 **Remember that**

$$(a - b)(a + b) = a^2 - b^2$$

$$\begin{aligned}
 (\sqrt{2} + \sqrt{6})^2 &= (\sqrt{2})^2 + 2 \times \sqrt{2} \times \sqrt{6} + (\sqrt{6})^2 \\
 &= 2 + 2\sqrt{12} + 6 \\
 &= 8 + 2\sqrt{4 \times 3} = 8 + 4\sqrt{3}
 \end{aligned}$$

Remember that

$$\begin{aligned}
 &\bullet (a + b)^2 = a^2 + 2ab + b^2 \\
 &\bullet (a - b)^2 = a^2 - 2ab + b^2
 \end{aligned}$$

Example 4

If $a = \frac{\sqrt{6} - \sqrt{2}}{\sqrt{2}}$, find the value of $a^2 + 2\sqrt{3}$

Solution

To facilitate the solution, we will make the denominator an integer by multiplying both the numerator and the denominator by $\sqrt{2}$

$$\begin{aligned}
 \therefore a &= \frac{\sqrt{6} - \sqrt{2}}{\sqrt{2}} \times \frac{\sqrt{2}}{\sqrt{2}} = \frac{\sqrt{6} \times \sqrt{2} - \sqrt{2} \times \sqrt{2}}{\sqrt{2} \times \sqrt{2}} = \frac{\sqrt{12} - 2}{2} \\
 &= \frac{\sqrt{4 \times 3} - 2}{2} = \frac{2\sqrt{3} - 2}{2} = \frac{2(\sqrt{3} - 1)}{2} = \sqrt{3} - 1
 \end{aligned}$$

$$\therefore a^2 = (\sqrt{3} - 1)^2 = (\sqrt{3})^2 - 2 \times \sqrt{3} \times 1 + 1 = 3 - 2\sqrt{3} + 1 = 4 - 2\sqrt{3}$$

$$\therefore a^2 + 2\sqrt{3} = 4 - 2\sqrt{3} + 2\sqrt{3} = 4$$

Another method to simplify a :

$$\therefore a = \frac{\sqrt{6} - \sqrt{2}}{\sqrt{2}} \quad \therefore a = \frac{\sqrt{6}}{\sqrt{2}} - \frac{\sqrt{2}}{\sqrt{2}} = \sqrt{\frac{6}{2}} - 1 = \sqrt{3} - 1$$

Exercise 1

1 Simplify to the simplest form :

1 $\sqrt{75} - 2\sqrt{27} + \sqrt{3}$

2 $2\sqrt{50} - 3\sqrt{2} - 4\sqrt{\frac{1}{8}}$

2 Write each of the following such that the denominator is an integer :

1 $\frac{5\sqrt{3}}{2\sqrt{5}}$

2 $\frac{1 + \sqrt{3}}{3\sqrt{3}}$

(2) $\frac{9}{3 + \sqrt{3}}$

(2) $6\sqrt{2}$

(1) $\frac{2}{\sqrt{15}}$

of try by yourself

The two conjugate numbers

If a and b are two positive rational numbers

Then each of the two numbers $(\sqrt{a} + \sqrt{b})$ and $(\sqrt{a} - \sqrt{b})$ is conjugate to the other one and we find that :

- Their sum = $(\sqrt{a} + \sqrt{b}) + (\sqrt{a} - \sqrt{b}) = 2\sqrt{a} = \text{twice the first term.}$

- Their product = $(\sqrt{a} + \sqrt{b})(\sqrt{a} - \sqrt{b}) = (\sqrt{a})^2 - (\sqrt{b})^2 = a - b$

the square
of
1st term

$(-)$

the square
of
2nd term

For example: $(\sqrt{3} - \sqrt{2})$ its conjugate is $(\sqrt{3} + \sqrt{2})$, then we find that

- Their sum = $2\sqrt{3}$
- Their product = $3 - 2 = 1$

! Remark

The product of the two conjugate numbers is always a rational number.

! Remark

If we have a real number whose denominator is written in the form

$(\sqrt{a} + \sqrt{b})$ or $(\sqrt{a} - \sqrt{b})$, we should put it in the simplest form by multiplying both the numerator and denominator by the conjugate of the denominator.

Example 1

Choose the correct answer from those given :

- 1 The number $\frac{4}{\sqrt{7}-\sqrt{3}}$ in the simplest form is

(a) $\sqrt{7}-\sqrt{3}$

(b) $\sqrt{7}+\sqrt{3}$

(c) $4\sqrt{7}-4\sqrt{3}$

(d) $4\sqrt{7}+4\sqrt{3}$

- 2 The conjugate of $\frac{1}{\sqrt{3}-\sqrt{2}}$ is

(a) $\sqrt{3}-\sqrt{2}$

(b) $\sqrt{3}-2$

(c) $\sqrt{3}+\sqrt{2}$

(d) $\sqrt{3}+2$

- 3 The multiplicative inverse of $1-\sqrt{2}$ is

(a) $\sqrt{2}-1$

(b) $1-\sqrt{2}$

(c) $-1-\sqrt{2}$

(d) $1+\sqrt{2}$

- 4 If $\frac{1}{x} = \sqrt{10}-3$, then $x = \dots\dots\dots$

(a) $\sqrt{10}+3$

(b) $\sqrt{10}-3$

(c) $3-\sqrt{10}$

(d) $-3-\sqrt{10}$

Solution

- 1 (b) **The reason :** Multiplying the two terms of the number by the conjugate of the denominator which is $(\sqrt{7}+\sqrt{3})$

$$\begin{aligned}\therefore \frac{4}{\sqrt{7}-\sqrt{3}} &= \frac{4}{\sqrt{7}-\sqrt{3}} \times \frac{\sqrt{7}+\sqrt{3}}{\sqrt{7}+\sqrt{3}} \\ &= \frac{4(\sqrt{7}+\sqrt{3})}{(\sqrt{7})^2 - (\sqrt{3})^2} = \frac{4(\sqrt{7}+\sqrt{3})}{7-3} \\ &= \sqrt{7}+\sqrt{3}\end{aligned}$$

- 2 (a) **The reason :** Multiplying the two terms of the number by the conjugate of the denominator which is $(\sqrt{3}+\sqrt{2})$

$$\begin{aligned}\therefore \frac{1}{\sqrt{3}-\sqrt{2}} &= \frac{1}{\sqrt{3}-\sqrt{2}} \times \frac{\sqrt{3}+\sqrt{2}}{\sqrt{3}+\sqrt{2}} \\ &= \frac{\sqrt{3}+\sqrt{2}}{3-2} = \sqrt{3}+\sqrt{2}\end{aligned}$$

$$\therefore \text{The conjugate of } \frac{1}{\sqrt{3}-\sqrt{2}} \text{ is } \sqrt{3}+\sqrt{2}$$

3 (c) The reason : The multiplicative inverse of $1 - \sqrt{2}$ is $\frac{1}{1 - \sqrt{2}}$,

by multiplying the two terms of the number by the conjugate of the denominator which is $(1 + \sqrt{2})$

$$\begin{aligned}\therefore \frac{1}{1 - \sqrt{2}} &= \frac{1}{1 - \sqrt{2}} \times \frac{1 + \sqrt{2}}{1 + \sqrt{2}} = \frac{1 + \sqrt{2}}{1 - 2} \\ &= \frac{1 + \sqrt{2}}{-1} = -1 - \sqrt{2}\end{aligned}$$

4 (a) The reason : $\because \frac{1}{x} = \sqrt{10} - 3 \quad \therefore x = \frac{1}{\sqrt{10} - 3}$

$$\therefore x = \frac{1}{\sqrt{10} - 3} \times \frac{\sqrt{10} + 3}{\sqrt{10} + 3} = \frac{\sqrt{10} + 3}{10 - 9} = \sqrt{10} + 3$$

Example 2

If $x = \frac{4}{2 - \sqrt{2}}$ and $y = \frac{3 - 2\sqrt{2}}{3 + 2\sqrt{2}}$, write each of x and y such that

its denominator is a rational number , then find $x + y$

Solution

$$\begin{aligned}\therefore x &= \frac{4}{2 - \sqrt{2}} \times \frac{2 + \sqrt{2}}{2 + \sqrt{2}} = \frac{4(2 + \sqrt{2})}{4 - 2} = \frac{4(2 + \sqrt{2})}{2} \\ &= 2(2 + \sqrt{2}) = 4 + 2\sqrt{2}\end{aligned}$$

$$\begin{aligned}y &= \frac{3 - 2\sqrt{2}}{3 + 2\sqrt{2}} \times \frac{3 - 2\sqrt{2}}{3 - 2\sqrt{2}} \\ &= \frac{(3 - 2\sqrt{2})^2}{9 - 8} = \frac{9 - 12\sqrt{2} + 8}{1} = 17 - 12\sqrt{2}\end{aligned}$$

$$\therefore x + y = 4 + 2\sqrt{2} + 17 - 12\sqrt{2} = 21 - 10\sqrt{2}$$

TRY 1

Write each of the following such that the denominator is a rational number :

1 $\frac{12}{\sqrt{6} - \sqrt{2}}$

2 $\frac{\sqrt{8}}{3 + 2\sqrt{2}}$

! Important remarks from direct product (multiplying by inspection)

• We know that : $(x - y)(x + y) = x^2 - y^2$

• And we know also :

$$(x + y)^2 = x^2 + 2xy + y^2$$

Then :

• $x^2 + xy + y^2 = (x + y)^2 - xy$

• $x^2 + y^2 = (x + y)^2 - 2xy$

$$(x - y)^2 = x^2 - 2xy + y^2$$

Then :

• $x^2 - xy + y^2 = (x - y)^2 + xy$

• $x^2 + y^2 = (x - y)^2 + 2xy$

Example 3

If $x = \sqrt[2]{5 - \sqrt{3}}$ and $y = \sqrt{5} - \sqrt{3}$, prove that x and y are conjugate numbers, then find the value of each of :

1 $x^2 + 2xy + y^2$

2 $x^2 + xy + y^2$

Solution

$$\begin{aligned} x &= \frac{2}{\sqrt{5} - \sqrt{3}} \times \frac{\sqrt{5} + \sqrt{3}}{\sqrt{5} + \sqrt{3}} = \frac{2(\sqrt{5} + \sqrt{3})}{5 - 3} \\ &= \frac{2(\sqrt{5} + \sqrt{3})}{2} = \sqrt{5} + \sqrt{3} \end{aligned}$$

$$\therefore y = \sqrt{5} - \sqrt{3}$$

$\therefore x$ and y are conjugate numbers.

$$\begin{aligned} 1 \quad x^2 + 2xy + y^2 &= (\sqrt{5} + \sqrt{3})^2 + 2(\sqrt{5} + \sqrt{3})(\sqrt{5} - \sqrt{3}) + (\sqrt{5} - \sqrt{3})^2 \\ &= (5 + 2\sqrt{15} + 3) + 2(5 - 3) + (5 - 2\sqrt{15} + 3) \\ &= 8 + 2\sqrt{15} + 4 + 8 - 2\sqrt{15} = 20 \end{aligned}$$

Alternatively, we can solve it as follows:

Since $x^2 + 2xy + y^2 = (x + y)^2$

$$\begin{aligned} \therefore x^2 + 2xy + y^2 &= [(\sqrt{5} + \sqrt{3}) + (\sqrt{5} - \sqrt{3})]^2 \\ &= (2\sqrt{5})^2 = 4 \times 5 = 20 \end{aligned}$$

$$\begin{aligned} 2 \quad x^2 + xy + y^2 &= (\sqrt{5} + \sqrt{3})^2 + (\sqrt{5} + \sqrt{3})(\sqrt{5} - \sqrt{3}) + (\sqrt{5} - \sqrt{3})^2 \\ &= (5 + 3 + 2\sqrt{15}) + (2) + (5 + 3 - 2\sqrt{15}) = 18 \end{aligned}$$

Alternative solution using the difference of two squares:

$$\begin{aligned} x^2 + xy + y^2 &= (x + y)^2 - xy = (\sqrt{5} + \sqrt{3} + \sqrt{5} - \sqrt{3})^2 - (\sqrt{5} + \sqrt{3})(\sqrt{5} - \sqrt{3}) \\ &= (2\sqrt{5})^2 - 2 = 20 - 2 = 18 \end{aligned}$$

If $x = \frac{3}{2\sqrt{2} - \sqrt{5}}$ and $y = 2\sqrt{2} - \sqrt{5}$, find the value of the expression :
 $x^2 - y^2$

of try by yourself

$$\begin{aligned} 1 \quad & 3\sqrt{6} + 3\sqrt{2} \\ 2 \quad & -8 + 6\sqrt{2} \end{aligned}$$

$$2 \quad 8\sqrt{10}$$

If a and b are two real numbers, then :

$$1 \quad \sqrt[3]{a} \times \sqrt[3]{b} = \sqrt[3]{ab}$$

For example:

- $\sqrt[3]{3} \times \sqrt[3]{9} = \sqrt[3]{3 \times 9} = \sqrt[3]{27} = 3$
- $\sqrt[3]{2} \times \sqrt[3]{-4} = \sqrt[3]{2 \times -4} = \sqrt[3]{-8} = -2$
- $\sqrt[3]{16} = \sqrt[3]{8 \times 2} = \sqrt[3]{8} \times \sqrt[3]{2} = 2\sqrt[3]{2}$
- $\sqrt[3]{-54} = \sqrt[3]{-27 \times 2} = \sqrt[3]{-27} \times \sqrt[3]{2} = -3\sqrt[3]{2}$

$$2 \quad \frac{\sqrt[3]{a}}{\sqrt[3]{b}} = \sqrt[3]{\frac{a}{b}} \quad (\text{where } b \neq 0)$$

For example:

- $\frac{\sqrt[3]{32}}{\sqrt[3]{4}} = \sqrt[3]{\frac{32}{4}} = \sqrt[3]{8} = 2$
- $\frac{\sqrt[3]{54}}{\sqrt[3]{-2}} = \sqrt[3]{\frac{54}{-2}} = \sqrt[3]{-27} = -3$
- $\sqrt[3]{\frac{8}{125}} = \frac{\sqrt[3]{8}}{\sqrt[3]{125}} = \frac{2}{5}$
- $\sqrt[3]{\frac{-27}{64}} = \frac{\sqrt[3]{-27}}{\sqrt[3]{64}} = \frac{-3}{4}$

Example 1 Find the result of each of the following in its simplest form :

1 $\sqrt[3]{\frac{2}{3}} \times \sqrt[3]{\frac{4}{9}}$

2 $\sqrt[3]{\frac{5}{4}} \div \sqrt[3]{\frac{2}{25}}$

$\sqrt[3]{\frac{2}{3}} \times \sqrt[3]{\frac{4}{9}} = \sqrt[3]{\frac{2}{3} \times \frac{4}{9}} = \sqrt[3]{\frac{8}{27}} = \sqrt[3]{\frac{8}{27}} = \frac{2}{3}$

$\sqrt[3]{\frac{5}{4}} \div \sqrt[3]{\frac{2}{25}} = \sqrt[3]{\frac{5}{4} \div \frac{2}{25}} = \sqrt[3]{\frac{5}{4} \times \frac{25}{2}} = \sqrt[3]{\frac{125}{8}} = \sqrt[3]{\frac{125}{8}} = \frac{5}{2}$

! Remarks

If a and b are two real numbers , then :

① $\sqrt[3]{a^3 + b^3} \neq a + b$, $\sqrt[3]{a^3 - b^3} \neq a - b$

② $\sqrt[3]{-a} = -\sqrt[3]{a}$

③ $a\sqrt[3]{b} = \sqrt[3]{a^3b}$

For example: • $3\sqrt[3]{\frac{1}{9}} = \sqrt[3]{27 \times \frac{1}{9}} = \sqrt[3]{3}$

• $8\sqrt[3]{\frac{1}{4}} = 4 \times 2\sqrt[3]{\frac{1}{4}} = 4\sqrt[3]{8 \times \frac{1}{4}} = 4\sqrt[3]{2}$

④ $\sqrt[3]{\frac{a}{b}} = \sqrt[3]{\frac{a}{b} \times \frac{b^2}{b^2}} = \sqrt[3]{\frac{ab^2}{b^3}} = \frac{1}{b}\sqrt[3]{ab^2}$ (Where $b \neq 0$)

For example: $\sqrt[3]{\frac{1}{3}} = \sqrt[3]{\frac{1}{3} \times \frac{9}{9}} = \sqrt[3]{\frac{9}{27}} = \frac{1}{3}\sqrt[3]{9}$

Example 2 Put each of the following in its simplest form :

1 $\sqrt[3]{24} + \sqrt[3]{3} - \sqrt[3]{81}$

2 $\sqrt[3]{54} + 6\sqrt[3]{16} - 6\sqrt[3]{\frac{1}{4}}$

3 $\sqrt[3]{81} + \sqrt[3]{12} - 2\sqrt[3]{3} - 2\sqrt[3]{3}$

Solution 1 $\sqrt[3]{24} + \sqrt[3]{3} - \sqrt[3]{81} = \sqrt[3]{8 \times 3} + \sqrt[3]{3} - \sqrt[3]{27 \times 3}$
 $= \sqrt[3]{8} \times \sqrt[3]{3} + \sqrt[3]{3} - \sqrt[3]{27} \times \sqrt[3]{3}$
 $= 2\sqrt[3]{3} + \sqrt[3]{3} - 3\sqrt[3]{3} = \text{zero}$

2 $\sqrt[3]{54} + 6\sqrt[3]{16} - 6\sqrt[3]{\frac{1}{4}} = \sqrt[3]{27 \times 2} + 6\sqrt[3]{8 \times 2} - 3 \times 2\sqrt[3]{\frac{1}{4}}$
 $= \sqrt[3]{27} \times \sqrt[3]{2} + 6 \times \sqrt[3]{8} \times \sqrt[3]{2} - 3 \times \sqrt[3]{8 \times \frac{1}{4}}$
 $= 3 \times \sqrt[3]{2} + 6 \times 2 \times \sqrt[3]{2} - 3 \times \sqrt[3]{2}$
 $= 3\sqrt[3]{2} + 12\sqrt[3]{2} - 3\sqrt[3]{2} = 12\sqrt[3]{2}$

Another solution :

$$\therefore \sqrt[3]{\frac{1}{4}} = \sqrt[3]{\frac{1}{4} \times \frac{16}{16}} = \sqrt[3]{\frac{16}{64}} = \sqrt[3]{\frac{16}{64}} = \frac{1}{4}\sqrt[3]{16}$$

$$\frac{1}{4}\sqrt[3]{8 \times 2} = \frac{1}{4} \times 2\sqrt[3]{2} = \frac{1}{2}\sqrt[3]{2}$$

$$\therefore \sqrt[3]{54} + 6\sqrt[3]{16} - 6\sqrt[3]{\frac{1}{4}} = 3\sqrt[3]{2} + 6 \times 2\sqrt[3]{2} - 6 \times \frac{1}{2}\sqrt[3]{2}$$

$$= 3\sqrt[3]{2} + 12\sqrt[3]{2} - 3\sqrt[3]{2} = 12\sqrt[3]{2}$$

One more solution :

$$\therefore \sqrt[3]{\frac{1}{4}} = \sqrt[3]{\frac{1}{4} \times \frac{2}{2}} = \sqrt[3]{\frac{2}{8}} = \sqrt[3]{\frac{2}{8}} = \frac{\sqrt[3]{2}}{2}$$

$$\therefore \sqrt[3]{54} + 6\sqrt[3]{16} - 6\sqrt[3]{\frac{1}{4}} = 3\sqrt[3]{2} + 12\sqrt[3]{2} - 6 \times \frac{\sqrt[3]{2}}{2}$$

$$= 3\sqrt[3]{2} + 12\sqrt[3]{2} - 3\sqrt[3]{2} = 12\sqrt[3]{2}$$

3 $\sqrt[3]{81} + \sqrt[3]{12} - 2\sqrt[3]{3} - 2\sqrt[3]{3} = \sqrt[3]{27 \times 3} + \sqrt[3]{4 \times 3} - 2\sqrt[3]{3} - 2\sqrt[3]{3}$
 $= \sqrt[3]{27} \times \sqrt[3]{3} + \sqrt[3]{4} \times \sqrt[3]{3} - 2\sqrt[3]{3} - 2\sqrt[3]{3}$
 $= 3\sqrt[3]{3} + 2\sqrt[3]{3} - 2\sqrt[3]{3} - 2\sqrt[3]{3} = \sqrt[3]{3}$

Example 3 Find in the simplest form : $2\sqrt[3]{4} \left(5\sqrt[3]{\frac{1}{2}} - \sqrt[3]{32} \right)$

$$\begin{aligned} 2\sqrt[3]{4} \left(5\sqrt[3]{\frac{1}{2}} - \sqrt[3]{32} \right) &= 2 \times 5 \sqrt[3]{4 \times \frac{1}{2}} - 2 \times \sqrt[3]{4 \times 32} \\ &= 10\sqrt[3]{2} - 2 \times \sqrt[3]{128} = 10\sqrt[3]{2} - 2 \times \sqrt[3]{64 \times 2} \\ &= 10\sqrt[3]{2} - 2 \times 4\sqrt[3]{2} = 10\sqrt[3]{2} - 8\sqrt[3]{2} = 2\sqrt[3]{2} \end{aligned}$$

Example 4 If $x = \sqrt[3]{5} + 2$ and $y = \sqrt[3]{5} - 2$, find the value of $(x + y)^3 - (x - y)^3$

Solution $\because x + y = \sqrt[3]{5} + 2 + \sqrt[3]{5} - 2 = 2\sqrt[3]{5}$

$x - y = \sqrt[3]{5} + 2 - (\sqrt[3]{5} - 2) = \sqrt[3]{5} + 2 - \sqrt[3]{5} + 2 = 4$

$\therefore (x + y)^3 - (x - y)^3 = (2\sqrt[3]{5})^3 - (4)^3 = 2^3 \times (\sqrt[3]{5})^3 - 4^3$

$= 8 \times 5 - 64 = 40 - 64 = -24$

Exercise 8.2 Simplify each of the following to the simplest form :

① $5\sqrt[3]{2} - \sqrt[3]{16} + \sqrt[3]{-54}$

② $\sqrt[3]{72} + \sqrt[3]{\frac{1}{3}} + \sqrt[3]{-9}$

② $\sqrt[3]{\frac{64}{27}}$

0 1

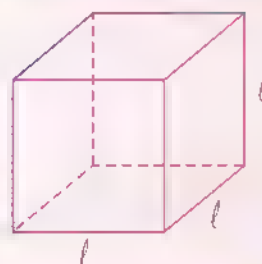

The cube

It is a solid whose six faces are congruent squares.

i.e. All its edges are equal in length.

Assuming that the edge length of the cube = ℓ length unit , then :

- 1 The area of each face = ℓ^2 square unit.
- 2 Its lateral area = $4 \ell^2$ square unit.
- 3 Its total area (the area of its 6 faces) = $6 \ell^2$ square unit.
- 4 Its volume = ℓ^3 cube unit.

Example 1 Choose the correct answer from those given :

- 1 A cube of volume 64 cm^3 , then the sum of its edge lengths is
 (a) 16 cm. (b) 32 cm. (c) 48 cm. (d) 64 cm.
- 2 A cube of volume 125 cm^3 , then its total area =
 (a) 200 cm^2 (b) 150 cm^2 (c) 125 cm^2 (d) 25 cm^2
- 3 A cube of volume 216 cm^3 , then its lateral area =
 (a) 36 cm^2 (b) 72 cm^2 (c) 144 cm^2 (d) 216 cm^2

- 4 The lateral area of a cube is 4 cm^2 , then its volume =
- (a) 1 cm^3 (b) 2 cm^3 (c) 4 cm^3 (d) 16 cm^3
- 5 The total area of a cube is 294 cm^2 , then its lateral area =
- (a) 28 cm^2 (b) 49 cm^2 (c) 196 cm^2 (d) 343 cm^2

Solution

- 1 (c) The reason : \because The volume of the cube $= l^3$ where l is its edge length
 $\therefore l^3 = 64$ $\therefore l = \sqrt[3]{64} = 4 \text{ cm.}$
 \therefore The sum of the edge lengths $= 12 l = 12 \times 4 = 48 \text{ cm.}$
- 2 (b) The reason : \because The volume of the cube $= l^3$ where l is its edge length
 $\therefore l^3 = 125$ $\therefore l = \sqrt[3]{125} = 5 \text{ cm.}$
 \therefore The total area of the cube $= 6 l^2 = 6 \times 5^2 = 150 \text{ cm}^2$
- 3 (c) The reason : \because The volume of the cube $= l^3$ where l is its edge length
 $\therefore l^3 = 216$ $\therefore l = \sqrt[3]{216} = 6 \text{ cm.}$
 \therefore The lateral area of the cube $= 4 l^2 = 4 \times 6^2 = 144 \text{ cm}^2$
- 4 (a) The reason : \because The lateral area of the cube $= 4 l^2$ where l is its edge length
 $\therefore 4 l^2 = 4$ $\therefore l^2 = 1$ $\therefore l = \sqrt{1} = 1 \text{ cm.}$
 \therefore The volume of the cube $= l^3 = 1^3 = 1 \text{ cm}^3$
- 5 (c) The reason : \because The total area of the cube $= 6 l^2$ where l is its edge length
 $\therefore 6 l^2 = 294$ $\therefore l^2 = \frac{294}{6} = 49$
 \therefore The lateral area $= 4 l^2 = 4 \times 49 = 196 \text{ cm}^2$

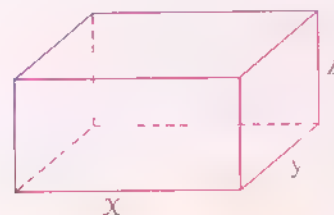

Complete the following table :

	Edge length of the cube	Area of one face	Lateral area	Total area	Volume
1	3 cm.
2	49 cm^2
3	144 cm^2
4	150 cm^2
5	64 cm^3

The cuboid

It is a solid that contains 6 faces, each of them is a rectangle and each two opposite faces are congruent. Assuming that the lengths of the edges of the cuboid are x , y and z length unit, then :

- 1 Its lateral area = the perimeter of the base \times height = $2(x + y) \times z$ square unit.
- 2 Its total area (the area of its six faces) = the lateral area + twice the area of the base

$$= 2(x + y) \times z + 2xy$$

$$= 2(xy + yz + zx) \text{ square unit.}$$
- 3 Its volume = the area of the base \times the height

$$= x \times y \times z \text{ cube unit.}$$

WATCH VIDEO

! Remarks

- The cuboid may contain two opposite faces, each of them is a square.
- The cube is a special case of the cuboid.
i.e. The cube is a cuboid with edges having the same length.

Example 2 The height of a cuboid is 4 cm. and its base is a square of side length 5 cm. Find :

- 1 Its volume.
- 2 Its lateral area.
- 3 Its total area.

Solution

- 1 The volume of the cuboid = the area of the base \times the height

$$= 5 \times 5 \times 4 = 100 \text{ cm}^3$$
- 2 The lateral area of the cuboid = the perimeter of the base \times the height

$$= 4 \times 5 \times 4 = 80 \text{ cm}^2$$
- 3 The total area of the cuboid

$$= \text{the lateral area} + \text{twice the area of the base} = 80 + 2 \times 25 = 130 \text{ cm}^2$$

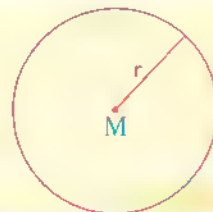

TRY 2
yourself

The dimensions of a cuboid are 3 cm, 4 cm, and 5 cm. Calculate its volume and its total area.

The circle

If M is a circle with radius length r , then :

- 1 The circumference of the circle = $2 \pi r$ length unit.
- 2 The area of the circle = πr^2 square unit.

**Example 3**

The area of a circle is $25 \pi \text{ cm}^2$. Calculate its circumference in terms of π

Solution

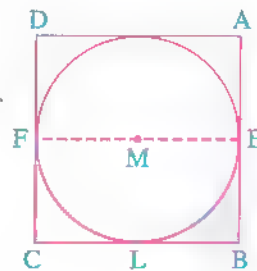

$$\begin{aligned} \therefore \text{The area of the circle} &= \pi r^2 & \therefore \pi r^2 &= 25 \pi \\ \therefore r^2 &= 25 & \therefore r &= \sqrt{25} = 5 \text{ cm.} \\ \therefore \text{The circumference of the circle} &= 2 \pi r \\ &= 2 \times 5 \times \pi = 10 \pi \text{ cm.} \end{aligned}$$

Example 4

In the opposite figure :

A circle M is drawn inside a square (touching its sides).
If the area of the square = 196 cm^2 , find :

- 1 The area of the shaded part.
- 2 The perimeter of the shaded part.

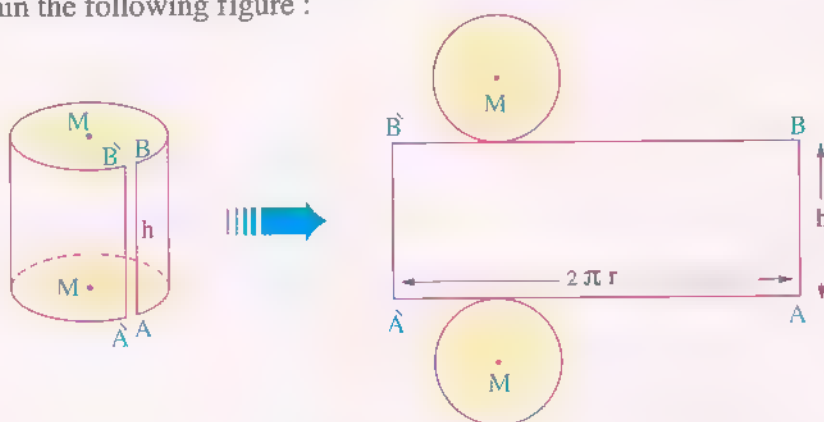

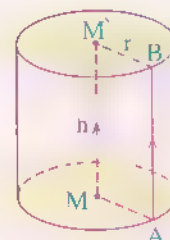

**Solution**

$$\begin{aligned} \therefore \text{The area of the square} &= 196 \text{ cm}^2 \\ \therefore \text{The side length of the square} &= \sqrt{196} = 14 \text{ cm.} \\ \therefore \text{the side length of the square} &= 2r \\ \therefore 14 &= 2r & \therefore r &= 7 \text{ cm.} \\ \text{1 The area of the shaded part} & \\ &= (\text{the area of the square} - \text{the area of the circle}) \div 4 \\ &= \left(196 - \frac{22}{7} \times 7 \times 7 \right) \div 4 = 42 \div 4 = 10.5 \text{ cm}^2 \\ \text{2 The perimeter of the shaded part} & \\ &= BE + BL + \frac{1}{4} \text{ circumference of the circle} = 7 + 7 + \left(\frac{1}{4} \times 2 \times \frac{22}{7} \times 7 \right) \\ &= 14 + 11 = 25 \text{ cm.} \end{aligned}$$

The circumference of a circle is 88 cm. Find its area. $(\pi = \frac{22}{7})$

The right circular cylinder

- It is a solid having two parallel congruent bases , each of them is a circular-shaped surface while its lateral surface is a curved surface which is called cylindrical surface.
- The line segment $\overline{MM'}$ drawn between the two centres of the two bases is perpendicular to each plane of the two bases and it is called the height of the cylinder.
- If we draw \overline{AB} on the cylindrical surface such that $A \in \text{the circle } M$, $B \in \text{the circle } M'$, $\overline{AB} \parallel \overline{MM'}$ and if we cut the lateral surface of the cylinder at \overline{AB} and flattened it out, then we will obtain the following figure :

This figure consists of the surface of the rectangle $ABB'A'$ and it is the same cylindrical surface of the cylinder in addition to the two surfaces of two circles which represent the two bases of the cylinder , then we find :

AB = the height of the cylinder.

$A'A$ = the circumference of the base of the cylinder.

\therefore The lateral area of the cylinder = the area of the rectangle $ABB'A' = A'A \times AB$

= the circumference of the base of the cylinder \times its height

and if we assume that the length of the radius of the base = r and its height = h , then :

- 1 The lateral area of the cylinder = $2 \pi r h$ square unit.
- 2 The total area of the cylinder = the lateral area of the cylinder + twice the area of the base = $2 \pi r h + 2 \pi r^2$ square unit.
- 3 The volume of the cylinder = the area of the base \times height = $\pi r^2 h$ cube unit.

Example 5 A right circular cylinder is of height 10 cm. and its volume is 1540 cm^3 . Find its total area ($\pi = \frac{22}{7}$)

Solution \therefore The volume of the cylinder = $\pi r^2 h$

$$\therefore 1540 = \frac{22}{7} \times r^2 \times 10$$

$$\therefore 1540 = \frac{220}{7} r^2$$

$$\therefore r^2 = 1540 \times \frac{7}{220} = 49$$

$$\therefore r = \sqrt{49} = 7 \text{ cm.}$$

$$\therefore \text{The total area of the cylinder} = 2 \pi r h + 2 \pi r^2$$

$$= 2 \times \frac{22}{7} \times 7 \times 10 + 2 \times \frac{22}{7} \times 7^2$$

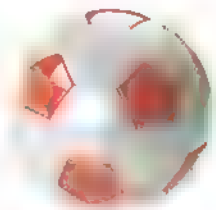

$$= 440 + 308 = 748 \text{ cm}^2$$

TIP 4

A right circular cylinder is of volume $90 \pi \text{ cm}^3$ and its height is 10 cm. Find the diameter length of its base.

The sphere

- It is a solid with a curved surface whose all points are equidistant from a fixed point inside the sphere.
 - The equal distances are called the radius length of the sphere.
 - The fixed point is called the centre of the sphere.
 - If we cut the sphere by a plane passing through its centre, then the resulted section is a circle having the same centre of the sphere and its radius length is the same of the sphere.
- Assuming that the radius length of the sphere = r , then :

WATCH VIDEO

- 1 The area of the sphere = $4 \pi r^2$ square unit.
- 2 The volume of the sphere = $\frac{4}{3} \pi r^3$ cube unit.

Example 6 The volume of a sphere = $\frac{500}{3} \pi \text{ cm}^3$. Find the length of its diameter.

Solution \therefore The volume of the sphere = $\frac{4}{3} \pi r^3$ $\therefore \frac{500}{3} \pi = \frac{4}{3} \pi r^3$
 $\therefore r^3 = \frac{500}{3} \times \frac{3}{4} = 125$ $\therefore r = \sqrt[3]{125} = 5 \text{ cm.}$
 \therefore The diameter length of the sphere = $2 \times 5 = 10 \text{ cm.}$

Example 7 A right circular cylinder is of height 6 cm. and its volume = $\frac{2}{3}$ the volume of a sphere whose radius length is 3 cm.

Find the radius length of the base of the cylinder.

Solution Let the radius length of the sphere be $r_1 \text{ cm.}$ and the radius length of the base of the cylinder be $r_2 \text{ cm.}$

$$\therefore \text{The volume of the sphere} = \frac{4}{3} \pi r_1^3 = \frac{4}{3} \pi (3)^3 = 36 \pi \text{ cm}^3$$

$$\therefore \text{The volume of the cylinder} = \frac{2}{3} \text{ the volume of the sphere.}$$

$$\therefore \pi r_2^2 h = \frac{2}{3} \times 36 \pi$$

$$\therefore r_2^2 \times 6 = 24$$

$$\therefore r_2^2 = 4$$

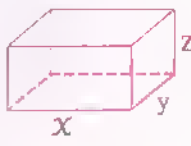

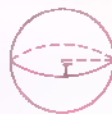

$$\therefore r_2 = \sqrt{4} = 2 \text{ cm.}$$

$$\therefore \text{The radius length of the base of the cylinder} = 2 \text{ cm.}$$

TRY 5

The area of a sphere is $36 \pi \text{ cm}^2$. Find its volume in terms of π

In the following , we will summarize the previous rules of areas and volumes of some solids :

The solid	The lateral area	The total area	The volume
The cube 	$4 l^2$	$6 l^2$	l^3
The cuboid 	$2 (x + y) \times z$	$2 (x y + y z + z x)$	$x y z$
The cylinder 	$2 \pi r h$	$2 \pi r h + 2 \pi r^2$ $= 2 \pi r (h + r)$	$\pi r^2 h$
The sphere 	-	$4 \pi r^2$	$\frac{4}{3} \pi r^3$

Solving equations and inequalities of the first degree in one variable in \mathbb{R}

First Solving equations of the first degree in one unknown in \mathbb{R}

* Each of the equations : • $2x - 5 = 3$ —

• $\sqrt{3}x - 1 = 8$ —

• $\frac{1}{2}x - \sqrt{5} = 0$ —

is called an equation of the first degree in one variable (one unknown) which is x because the exponent of the variable x equals one.

* Solving the equation of the first degree in one variable means finding the real number which satisfies this equation.

* The following examples will show how to solve an equation of the first degree in one variable :

Example 1 Find in \mathbb{R} the S.S. of each of the following equations , then represent the solution on the number line :

1 $3x + 2 = 1$

2 $\sqrt{3}x - 1 = 2$

3 $7x - \sqrt{7} = 6\sqrt{7}$

4 $x - \sqrt{5} = 1$

Solution 1 $\therefore 3x + 2 = 1$ (adding -2 to both sides)

$$\therefore 3x + 2 - 2 = 1 - 2 \quad \therefore 3x = -1$$

(multiplying both sides by $\frac{1}{3}$ the multiplicative inverse of the coefficient of x)

$$\therefore 3x \times \frac{1}{3} = -1 \times \frac{1}{3} \quad \therefore x = -\frac{1}{3} \quad \therefore \text{The S.S.} = \left\{-\frac{1}{3}\right\}$$

• We can represent the number $-\frac{1}{3}$ on the number line as follows :

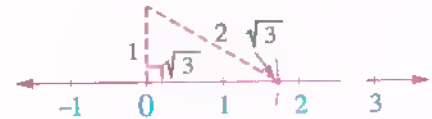

$$2 \quad \therefore \sqrt{3}x - 1 = 2 \quad \therefore \sqrt{3}x = 2 + 1$$

$$\therefore \sqrt{3}x = 3 \quad \therefore x = \frac{3}{\sqrt{3}} \times \frac{\sqrt{3}}{\sqrt{3}}$$

$$\therefore x = \frac{3\sqrt{3}}{3} \quad \therefore x = \sqrt{3}$$

$$\therefore \text{The S.S.} = \{\sqrt{3}\}$$

• We can represent the number $\sqrt{3}$ on the number line as follows :

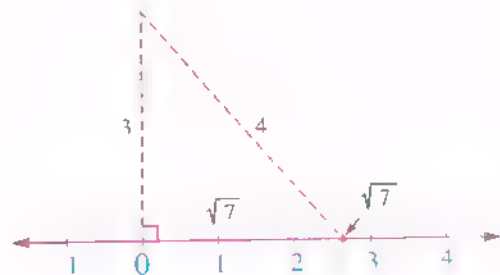

$$3 \quad \therefore 7x - \sqrt{7} = 6\sqrt{7} \quad \therefore 7x = 6\sqrt{7} + \sqrt{7}$$

$$\therefore 7x = 7\sqrt{7} \quad \therefore x = \frac{7\sqrt{7}}{7}$$

$$\therefore x = \sqrt{7}$$

$$\therefore \text{The S.S.} = \{\sqrt{7}\}$$

• We can represent the number $\sqrt{7}$ on the number line as follows :

$$4 \quad \therefore x - \sqrt{5} = 1 \quad \therefore x = 1 + \sqrt{5}$$

\therefore The S.S. = $\{1 + \sqrt{5}\}$

- We can represent the number $(1 + \sqrt{5})$ on the number line as follows :

Find in \mathbb{R} the S.S. of each of the following equations , then represent the solution on the number line :

① $2x + 5 = 4$

② $\sqrt{5}x - 1 = 4$

③ $x - \sqrt{3} = 2$

Solving inequalities of the first degree in one unknown in \mathbb{R}

- Each of the inequalities :

• $2x < 5$

• $3x + 2 \leq 1$

• $5 + x > 2x - 1 \geq 3 + x$

is called an inequality of the first degree in one unknown denoted by x

- Solving the inequality means finding all values of the unknown (x) which satisfy this inequality.
- The S.S. of the inequality in \mathbb{R} will be written as an interval as will be shown later.

WATCH VIDEO

The methods of solving these inequalities in \mathbb{R} depend on the properties of the inequality relation which will be summarized in the following :

Let a , b and c be three real numbers and assuming that $a < b$, then :

$a + c < b + c$ whether c is **positive** or **negative** (the addition property)

$ac < bc$ if c is **positive** (the property of multiplying by a positive real number)

$ac > bc$ if c is **negative** (the property of multiplying by a negative real number)

i.e. When we multiply (or divide) the two sides of an inequality by a negative number , we should change the symbol of the inequality.

WATCH VIDEO

Example 2 Find in \mathbb{R} the S.S. of each of the following inequalities , then represent the solution on the number line :

1 $2x + 6 < 2$

2 $5 - 4x \leq -3$

Solution 1 $\therefore 2x + 6 < 2$ (adding the additive inverse of the number 6 (it is -6) to both sides)

$$\therefore 2x + 6 - 6 < 2 - 6$$

$$\therefore 2x < -4$$

(multiplying both sides by the multiplicative inverse of the number 2 (it is $\frac{1}{2}$))

$$\therefore 2x \times \frac{1}{2} < -4 \times \frac{1}{2}$$

$$\therefore x < -2$$

\therefore The S.S. is all the real numbers which are less than -2

i.e. The S.S. = $] -\infty, -2[$

2 $\therefore 5 - 4x \leq -3$ (adding -5 to both sides)

$$\therefore -4x \leq -8$$
 (dividing both sides by -4)

$$\therefore x \geq 2$$

(Notice the change in the symbol of the inequality because we divided by a negative number)

\therefore The S.S. = $[2, \infty[$

Example 3 Find in \mathbb{R} the S.S. of each of the following inequalities , then represent the solution on the number line :

1 $-3 < 2x - 1 \leq 5$

2 $3 < 3 - 5x < 13$

Solution 1 $\therefore -3 < 2x - 1 \leq 5$ (adding 1 to all sides)

$$\therefore -2 < 2x \leq 6$$
 (dividing all sides by 2)

$$\therefore -1 < x \leq 3$$

\therefore The S.S. = $] -1, 3]$

2 $\therefore 3 < 3 - 5x < 13$ (subtracting 3 from all sides)

$$\therefore 0 < -5x < 10$$
 (dividing all sides by -5)

$$\therefore 0 > x > -2$$

(Notice the change in the symbols of the inequality because we divided by a negative number).

\therefore The S.S. = $] -2, 0[$

Example 4 Find in \mathbb{R} the S.S. of each of the following inequalities :

1 $x - 2 \geq 3x - 5$

2 $x - 1 < 3x - 3 \leq x + 5$

1 $\therefore x - 2 \geq 3x - 5$ (adding 2 to both sides)

$\therefore x \geq 3x - 3$ (adding $-3x$ to both sides)

$\therefore -2x \geq -3$ (multiplying both sides by $-\frac{1}{2}$)

$\therefore x \leq \frac{3}{2}$ (Notice the change in the symbol of the inequality)

\therefore The S.S. = $]-\infty, \frac{3}{2}]$

2 $\therefore x - 1 < 3x - 3 \leq x + 5$ (adding 3 to all sides)

$\therefore x + 2 < 3x \leq x + 8$ (adding $-x$ to all sides)

$\therefore 2 < 2x \leq 8$ (multiplying by $\frac{1}{2}$)

$\therefore 1 < x \leq 4$ \therefore The S.S. = $]1, 4]$

Another solution for number (2) :

We can divide this inequality into two inequalities as follows :

$x - 1 < 3x - 3 \longrightarrow (1)$ and $3x - 3 \leq x + 5 \longrightarrow (2)$

Then the solution set of the origin inequality is the intersection set of the two sets of solutions of the two inequalities (1) and (2)

• **Finding the S.S. of the inequality (1) :**

$\therefore x - 1 < 3x - 3$ (adding 1 to both sides)

$\therefore x < 3x - 2$ (adding $-3x$ to both sides)

$\therefore -2x < -2$ (multiplying both sides by $-\frac{1}{2}$)

$\therefore x > 1$ \therefore The S.S. = $]1, \infty[$

• **Finding the S.S. of the inequality (2) :**

$$\therefore 3x - 3 \leq x + 5 \quad (\text{adding } 3 \text{ to both sides})$$

$$\therefore 3x \leq x + 8 \quad (\text{adding } -x \text{ to both sides})$$

$$\therefore 2x \leq 8 \quad \left(\text{multiplying both sides by } \frac{1}{2} \right)$$

$$\therefore x \leq 4 \quad \therefore \text{The S.S.} =]-\infty, 4]$$

• The S.S. of the origin inequality = $]1, \infty[\cap]-\infty, 4] =]1, 4]$

TRY 2

Find in \mathbb{R} the S.S. of each of the following inequalities :

1 $3x - 1 > 8$

2 $2 - 2x \geq -6$

3 $-16 < 5x + 4 \leq 9$

4 $2x + 1 > 4x - 3 > 2x - 11$

1	1	2	1	2	1
$\{-\frac{1}{2}\}$	$\{\sqrt{5}\}$	$\{2 + \sqrt{3}\}$	$[-4, 1]$	$[-\infty, 4]$	$[3, \infty]$

UNIT

2

Relation between Two Variables

Lessons of the unit :

1. Relation between two variables.
2. Slope of straight line.
3. Real life applications on the slope.

► Use your smart phone or tablet to scan the QR Code and enjoy watching videos.

Unit Objectives :

By the end of this unit, student should be able to :

- recognize the relation between two variables of first degree.
- represent the relation between two variables of first degree graphically.
- recognize the slope of the straight line.
- find the slope of the straight line passing through two given points.
- recognize the slope of the straight line parallel to x-axis and the slope of the straight line parallel to y-axis.
- verify using the slope of the straight line that the three points are collinear or not.
- find the uniform velocity of a car by using the slope of the straight line.
- solve applications on the slope of the straight line.

Relation between two variables

The concept of the relation between two variables

- Islam has 50 pounds. If Islam went to the amusement park , he would find two kinds of favourite games :

The first kind

costs 5 pounds for playing one game.

The second kind

costs 10 pounds for playing one game.

- What are the different possibilities for playing the two kinds such that he spends all his money ?

• To find all the possibilities :

- Assume that he will play x games of the first kind and y games of the second kind.
- Then the cost of playing the first kind is $5x$ pounds and the cost of playing the second kind is $10y$ pounds.
- In order to spend all his money , it should be : $5x + 10y = 50$
- This is an algebraic relation between the two variables x and y and it is called an equation of the first degree in two variables.

- We can simplify the previous relation by dividing all terms by 5 to get an equivalent equation which is : $x + 2y = 10$

It can be written also in the form : $2y = 10 - x$

i.e. $y = \frac{10 - x}{2}$

$$5x + 10y = 50 \quad -5$$

$$x + 2y = 10$$

$$2y = 10 - x \quad (\div 2)$$

$$y = \frac{10 - x}{2}$$

For example:

- If Islam decided that he will not play the first kind.

i.e. $x = 0$, then $y = \frac{10 - 0}{2} = 5$

i.e. He can spend all his money by playing 5 games of the second kind.

We express that by the ordered pair $(0, 5)$

- If he decided to play one game of the first kind.

i.e. $x = 1$, then $y = \frac{10 - 1}{2} = 4\frac{1}{2}$

but in this case , he cannot play $4\frac{1}{2}$ games of the second kind because the number of games must be a natural number.

- If he decided to play two games of the first kind

i.e. $x = 2$, then $y = \frac{10 - 2}{2} = 4$

i.e. He can spend all his money by playing 2 games of the first kind and 4 games of the second kind . We express that by the ordered pair $(2, 4)$

Thus we can know the different possibilities and put them in a table such as the following :

Number of games of the 1 st kind (x)	0	2	4	6	8	10
Number of games of the 2 nd kind (y)	5	4	3	2	1	0

! Remarks

- There is an infinite number of ordered pairs which satisfy the previous relation but some of them can't represent the possible numbers of each games because the number of games must be a natural number.

– As we mentioned before $(1, 4\frac{1}{2})$ satisfies the relation but it is not possible to represent the number of games because $4\frac{1}{2} \notin \mathbb{N}$

– Similarly $(-2, 6)$ satisfies the relation but it is not to be used because $-2 \notin \mathbb{N}$

- To find all the possibilities , we write the equation : $x + 2y = 10$ putting y in one hand

side as : $y = \frac{10 - x}{2}$

We can also put x in one hand side as : $x = 10 - 2y$

And the following example shows that.

Example 1 What are the different possibilities for a person to pay L.E. 45 using two kinds of bills (banknotes) of L.E. 5 and L.E. 10 ?

Solution Let the number of bills of L.E. 5 be x , then its value = $5x$ pounds and the number of bills of L.E. 10 be y , then its value = $10y$ pounds.

$$\therefore 5x + 10y = 45, \text{ dividing the two sides by } 5$$

$$\therefore x + 2y = 9$$

Putting x in one hand side, then the equation will be in the form :

$$x = 9 - 2y$$

The following table shows all possibilities to pay the sum of money :

y	x	(x, y)	Number of bills of each kind
0	$9 - 2 \times 0 = 9$	$(9, 0)$	9 bills of 5 pounds
1	$9 - 2 \times 1 = 7$	$(7, 1)$	7 bills of 5 pounds and 1 bill of 10 pounds
2	$9 - 2 \times 2 = 5$	$(5, 2)$	5 bills of 5 pounds and 2 bills of 10 pounds
3	$9 - 2 \times 3 = 3$	$(3, 3)$	3 bills of 5 pounds and 3 bills of 10 pounds
4	$9 - 2 \times 4 = 1$	$(1, 4)$	1 bill of 5 pounds and 4 bills of 10 pounds

Notice that :

If $y = 5$, then $x = -1 \notin \mathbb{N}$, then $y = 5$ is impossible.

Find the different possibilities for a person to pay L.E. 65 of bills (banknotes) of L.E. 5 and L.E. 20

The linear relation

- The linear relation is a relation of the first degree between two variables x and y , it is in the form

$ax + by = c$, where a , b and c are real numbers, a and b are not both equal to zero

- There is an infinite number of ordered pairs which satisfy this relation.

- If we represent it graphically, the graph will be a **straight line** therefore it is called a **linear relation**, this will be shown later when we study the graphic representation of the linear relation.

Example 2 Find three ordered pairs satisfying each of the following relations :

1 $3x + y = 5$

2 $3x - 2y = 6$

3 $2x = 3$

4 $y = -2$

Solution We can find these ordered pairs by setting a value for x and substituting in the relation to get its corresponding value of y or we do the converse :

- 1 • Set $x = 0$

$$\therefore 3 \times 0 + y = 5$$

$$\therefore y = 5$$

$\therefore (0, 5)$ satisfies the relation.

- Set $x = 1$

$$\therefore 3 \times 1 + y = 5$$

$$\therefore y = 5 - 3 = 2$$

$\therefore (1, 2)$ satisfies the relation.

- Set $x = -2$

$$\therefore 3 \times (-2) + y = 5$$

$$\therefore y = 5 + 6 = 11$$

$\therefore (-2, 11)$ satisfies the relation.

- 2 By substituting directly as we did in 1 we can get the ordered pairs but we will present another method of solution by putting one of the two variables in one hand side alone.

$$\therefore 3x - 2y = 6$$

$$\therefore -2y = 6 - 3x \text{ (multiply by } (-1) \text{)}$$

$$\therefore 2y = 3x - 6$$

$$\therefore y = \frac{3x - 6}{2}$$

- Set $x = 0$

$$\therefore y = \frac{3 \times 0 - 6}{2} = \frac{-6}{2} = -3$$

$\therefore (0, -3)$ satisfies the relation.

- Set $x = 1$

$$\therefore y = \frac{3 \times 1 - 6}{2} = \frac{-3}{2} = -1\frac{1}{2}$$

$\therefore (1, -1\frac{1}{2})$ satisfies the relation.

- Set $x = 2$

$$\therefore y = \frac{3 \times 2 - 6}{2} = 0$$

$\therefore (2, 0)$ satisfies the relation.

$$3 \quad \therefore 2x = 3 \qquad \therefore x = \frac{3}{2} \qquad \therefore x = 1\frac{1}{2}$$

This relation will be satisfied for all ordered pairs (x, y) where $x = 1\frac{1}{2}$ whatever the value of y such as $(1\frac{1}{2}, 0)$, $(1\frac{1}{2}, 1)$ and $(1\frac{1}{2}, 2)$

$$4 \quad y = -2$$

This relation will be satisfied for all ordered pairs (x, y) , where $y = -2$, whatever the value of x such as $(0, -2)$, $(1, -2)$ and $(2, -2)$

Example 3

Choose the correct answer from those given :

1 Which of the following ordered pairs satisfies the relation $2x - y = 1$?

- (a) $(0, 1)$ (b) $(5, 3)$ (c) $(3, 5)$ (d) $(-2, 5)$

2 If $(2, -3)$ satisfies the relation $2x - y = c$, then $c = \dots\dots\dots$

- (a) -7 (b) -1 (c) 1 (d) 7

3 If $(-2, 1)$ satisfies the relation $3x + by = 1$, then $b =$

- (a) -7 (b) -5 (c) c (d) 7

4 If $(k, 2k)$ satisfies the relation $5x - y = 6$, then $k =$

- (a) -18 (b) -2 (c) 2 (d) 18

5 If $(k, -2)$ satisfies the relation $5x + 4y = 7$, then $k =$

- (a) -3 (b) $-\frac{1}{5}$ (c) $\frac{1}{5}$ (d) 3

Solution

(c) **The reason :** By substituting each ordered pair in the given relation, we find that $(3, 5)$ satisfies the relation as follows : putting $x = 3, y = 5$
 $\therefore 2x - y = 2(3) - 5 = 6 - 5 = 1$
 $\therefore (3, 5)$ satisfies the relation.

2 (d) **The reason :** $\because (2, -3)$ satisfies the relation $2x - y = c$
 $\therefore 2(2) - (-3) = c$
 $\therefore 4 + 3 = c$
 $\therefore c = 7$

- 3 (d) The reason : $\because (-2, 1)$ satisfies the relation : $3x + by = 1$
 $\therefore 3(-2) + b \times 1 = 1 \qquad \therefore -6 + b = 1$
 $\therefore b = 1 + 6 \qquad \therefore b = 7$
- 4 (c) The reason : $\because (k, 2k)$ satisfies the relation : $5x - y = 6$
 $\therefore 5k - 2k = 6 \qquad \therefore 3k = 6$
 $\therefore k = 2$
- 5 (d) The reason : $\because (k, -2)$ satisfies the relation : $5x + 4y = 7$
 $\therefore 5k + 4(-2) = 7 \qquad \therefore 5k - 8 = 7$
 $\therefore 5k = 15 \qquad \therefore k = 3$

TRY yourself 2

- 1 Find four ordered pairs satisfying the relation : $3x + y = 2$
- 2 If $(3k, 2k)$ satisfies the relation : $x - 3y = 9$, find the value of k

The graphic representation of the linear relation

- We mentioned that linear relation between two variables x and y is usually written in the form : $ax + by = c$, where a , b and c are real numbers, a and b are not both equal to zero.
 This linear relation is represented graphically by a straight line (that is why it is called linear).
- To graph a linear relation, you need to graph at least two ordered pairs satisfying this relation. You can add a third ordered pair to check that the three points lie on the same straight line which is the graphic representation of the relation.

Example 4 Represent the relation : $2x - y = 3$ graphically

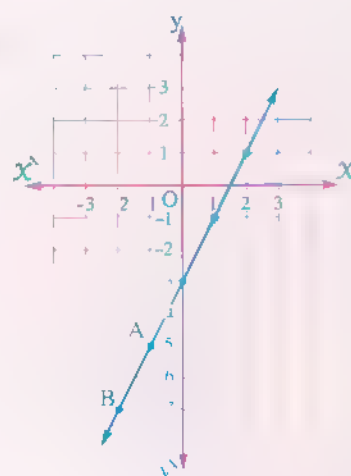

Solution To represent this relation graphically, we should determine three ordered pairs satisfying the relation : $2x - y = 3$, as follows :

- Set $x = 0 \qquad \therefore 2 \times 0 - y = 3 \qquad \therefore -y = 3 \qquad \therefore y = -3$
- Set $x = 1 \qquad \therefore 2 \times 1 - y = 3 \qquad \therefore -y = 1 \qquad \therefore y = -1$
- Set $x = 2 \qquad \therefore 2 \times 2 - y = 3 \qquad \therefore -y = -1 \qquad \therefore y = 1$

It is preferable to put the values of x and y in a table as the following :

x	0	1	2
y	-3	-1	1

Then we determine the points which represent these ordered pairs : $(0, -3)$, $(1, -1)$ and $(2, 1)$ on orthogonal coordinates system, then we draw the straight line passing through these points, it will be the graphic representation of the relation : $2x - y = 3$

! Remark

All the points of the straight line which represents the relation determine ordered pairs which satisfy the relation.

For example:

The point A determines the ordered pair $(-1, -5)$ which satisfies the relation when we put $x = -1$ we find that $2 \times (-1) - y = 3$ i.e. $y = -5$ and also the point B $(-2, -7)$

EXERCISE 3

Represent the relation : $y - 2x = 1$ graphically.

Special cases

We studied before the relation : $ax + by = c$, where a, b are not both equal to zero and it is called a linear relation and it is represented graphically by a straight line and now we study the following cases :

1 If $a = 0, b \neq 0$

Then the relation becomes in the form :

$$by = c$$

and it is represented graphically by a straight line parallel to x -axis and intersects y -axis at the point $(0, \frac{c}{b})$

For example :

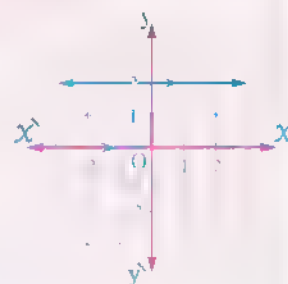

The relation : $2y = 4$

i.e. $y = 2$ is represented by a straight line parallel to x -axis and intersects y -axis at the point $(0, 2)$

Notice that :

The relation : $y = 0$ is represented by x -axis

Examples

2 If $b = 0$, $a \neq 0$

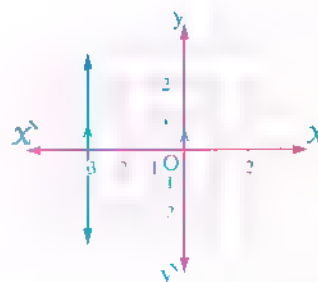

Then the relation becomes in the form :

$$aX = c$$

and it is represented graphically by a straight line parallel to y-axis and intersects X-axis at the point $(\frac{c}{a}, 0)$

For example :

The relation : $X = -3$ is represented by a straight line parallel to y-axis and intersects X-axis at the point $(-3, 0)$

Notice that :

The relation : $X = 0$ is represented by y-axis

3 If $c = 0$

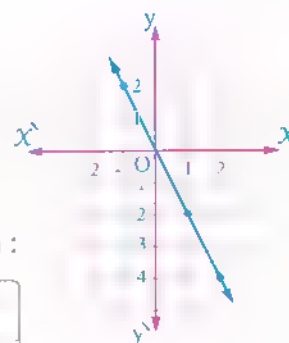

Then the relation becomes :

$$aX + bY = 0$$

and it is represented by a straight line passing through the origin point $(0, 0)$

For example :

The relation : $2X + Y = 0$ is represented graphically by a straight line passing through the origin point as shown in the opposite graph :

X	1	-1	2
y	-2	2	-4

Example 5 Graph the straight line which represents the relation : $2X + 5Y = 10$ and if this straight line intersects X-axis at the point A and y-axis at the point B , find the area of ΔOAB where O is the origin point.

Solution $\therefore 2X + 5Y = 10$

$$\therefore X = \frac{10 - 5Y}{2}$$

• Set $y = 0$

$$\therefore (5, 0) \text{ satisfies the relation.}$$

• Set $y = 2$

$$\therefore (0, 2) \text{ satisfies the relation.}$$

• Set $y = 4$

$$\therefore (-5, 4) \text{ satisfies the relation}$$

$$\therefore 2X = 10 - 5Y$$

$$\therefore X = \frac{10 - 5(0)}{2} = 5$$

$$\therefore X = \frac{10 - 5(2)}{2} = 0$$

$$\therefore X = \frac{10 - 5(4)}{2} = -5$$

x	5	0	-5
y	0	2	4

\therefore The straight line intersects x -axis at the point (5 , 0)

\therefore OA = 5 length units.

\therefore the straight line intersects y -axis at the point (0 , 2)

\therefore OB = 2 length units.

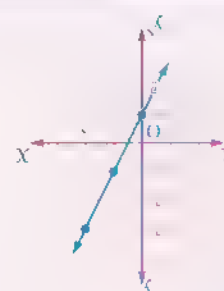

\therefore The area of Δ OAB = $\frac{1}{2}$ OA \times OB = $\frac{1}{2} \times 5 \times 2 = 5$ square units.

! Remark

In the previous example , we can get the points of intersection of the straight line representing the relation : $2x + 5y = 10$ and the coordinate axes without using the graph as the following :

- Set $y = 0$ $\therefore 2x + 5 \times 0 = 10$
 $\therefore 2x = 10$ $\therefore x = 5$
 \therefore The point of intersection with x -axis is (5 , 0)
- Set $x = 0$ $\therefore 2(0) + 5y = 10$
 $\therefore 5y = 10$ $\therefore y = 2$
 \therefore The point of intersection with y -axis is (0 , 2)

of try by yourself

Slope of straight line

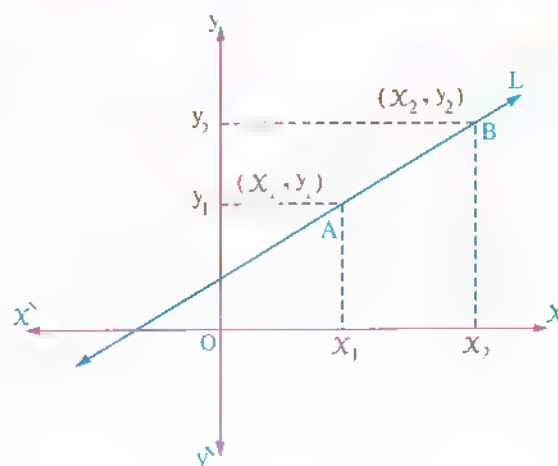

If a point moves on a straight line L from the location $A (X_1, y_1)$ to the location $B (X_2, y_2)$, then :

– The change in the X -coordinates $= X_2 - X_1$
It is called (the horizontal change).

– The change in the y -coordinates $= y_2 - y_1$
It is called (the vertical change).

The ratio of the change in the y -coordinates to the change in the X -coordinates is called the slope of the straight line (S).

**Definition**

The slope of the straight line $= \frac{\text{the change in } y\text{-coordinates}}{\text{the change in } X \text{ coordinates}} = \frac{\text{the vertical change}}{\text{the horizontal change}}$

i.e. • $S = \frac{y_2 - y_1}{X_2 - X_1}$, where $X_1 \neq X_2$

• S is undefined if $X_1 = X_2$

WATCH VIDEO

Example 1 In the opposite figure :

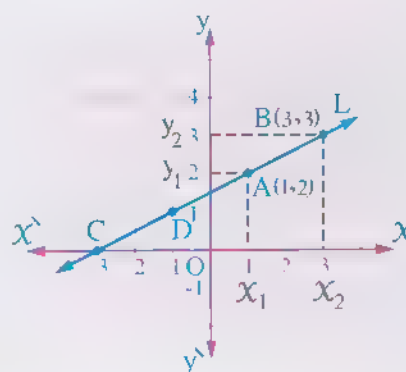

Find the slope of the straight line L

Solution

We determine two points on the straight line such as A = (1, 2) and B = (3, 3)

$$\therefore S = \frac{y_2 - y_1}{x_2 - x_1}$$

$$\therefore S = \frac{3 - 2}{3 - 1} = \frac{1}{2}$$

! Remark

In the previous example, notice that if we used another two points of the straight line to find its slope as the points C (-3, 0) and D (-1, 1) we find that :

$$S = \frac{y_2 - y_1}{x_2 - x_1} = \frac{1 - 0}{-1 - (-3)} = \frac{1}{2} \text{ (the same result)}$$

i.e. The slope of the straight line is constant for any two selected points on it.

Example 2

Find the slope of the straight line passing through each pair of points in the following :

1 (2, 4), (4, 5)

2 (1, 3), (4, 2)

3 (-2, -3), (-4, 1)

4 (3, 1), (-1, 0)

Solution

1 $S = \frac{y_2 - y_1}{x_2 - x_1} = \frac{5 - 4}{4 - 2} = \frac{1}{2}$

2 $S = \frac{y_2 - y_1}{x_2 - x_1} = \frac{2 - 3}{4 - 1} = \frac{-1}{3}$

3 $S = \frac{y_2 - y_1}{x_2 - x_1} = \frac{1 - (-3)}{-4 - (-2)} = \frac{4}{-2} = -2$

4 $S = \frac{y_2 - y_1}{x_2 - x_1} = \frac{0 - 1}{-1 - 3} = \frac{-1}{-4} = \frac{1}{4}$

TRY YOURSELF 1

Find the slope of the straight line passing through each pair of points in the following :

1 (2, 1), (3, 4)

2 (3, -5), (-4, 2)

3 (-3, -1), (1, 0)

4 (-6, 3), (-4, 2)

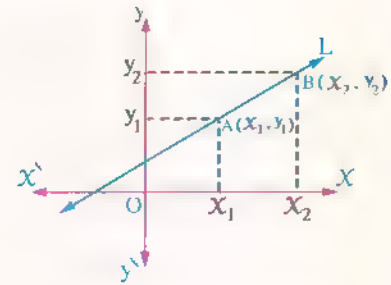

! Remarks

- If a point moves on a straight line from the location $A(X_1, y_1)$ to the location $B(X_2, y_2)$, where $X_2 > X_1$, then

1 If $y_2 > y_1$

i.e. y increases as X increases, then the slope of the straight line is a **positive** number.

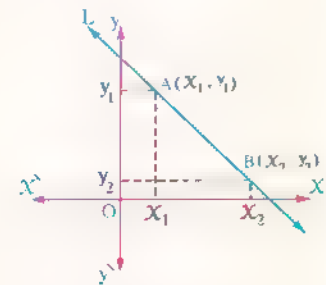

i.e. $S > 0$

2 If $y_2 < y_1$

i.e. y decreases as X increases, then the slope of the straight line is a **negative** number.

i.e. $S < 0$

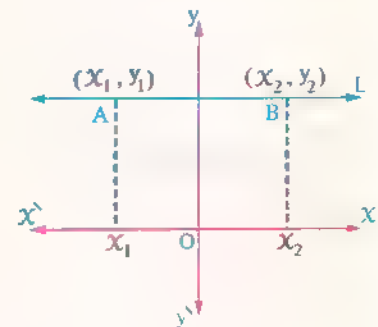

3 If $y_2 = y_1$

i.e. y is constant as X changes, then the slope of the straight line = **zero**

i.e. $S = 0$

i.e. The slope of the straight line parallel to X axis = zero

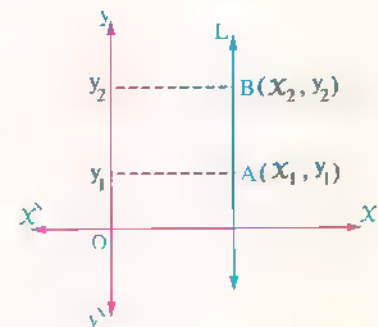

4 If $X_2 = X_1$

, then the slope of the straight line is **undefined** because there is no change in the X -axis.

i.e. $X_2 - X_1 = 0$

i.e. The slope of the straight line parallel to y -axis is undefined.

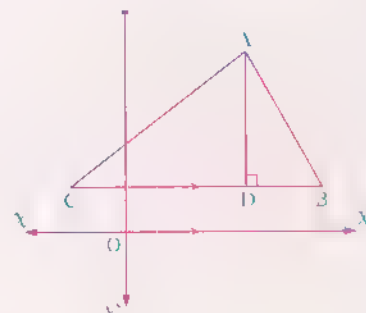

Example 3

In the opposite figure :

ABC is a triangle in which

$\overrightarrow{BC} \parallel \overrightarrow{XX'}$, $\overrightarrow{AD} \perp \overrightarrow{BC}$

Complete the following using one of the words (positive , negative , zero , undefined) in the spaces :

1 The slope of \overrightarrow{AB} is

2 The slope of \overrightarrow{BC} is

3 The slope of \overrightarrow{AC} is

4 The slope of \overrightarrow{AD} is

Solution

1 Negative

2 Zero

3 Positive

4 Undefined

Example 4

If the slope of the straight line passing through the two points $(-3, 4)$ and $(1, y)$ is 2 , find the value of y

Solution

$$\therefore S = \frac{y_2 - y_1}{x_2 - x_1}$$

$$\therefore 2 = \frac{y - 4}{1 - (-3)}$$

$$\therefore 2 = \frac{y - 4}{4}$$

$$\therefore y - 4 = 2 \times 4$$

$$\therefore y - 4 = 8$$

$$\therefore y = 12$$

! An important remark

In the previous , we found that the slope of the straight line is constant and it does not change whatever the two selected points on the line , therefore to prove that the three points A , B and C are collinear , then we find the slope of \overrightarrow{AB} and the slope of \overrightarrow{BC}

If the slope of $\overrightarrow{AB} =$ the slope of \overrightarrow{BC} , then A , B and C are collinear.

Example 5

Prove that the points A (2 , 3) , B (4 , 2) and C (8 , 0) are collinear.

Solution

$$\therefore S = \frac{y_2 - y_1}{x_2 - x_1}$$

$$\therefore \text{The slope of } \overrightarrow{AB} = \frac{2-3}{4-2} = -\frac{1}{2} , \text{ the slope of } \overrightarrow{BC} = \frac{0-2}{8-4} = \frac{-2}{4} = -\frac{1}{2}$$

, \therefore the slope of $\overrightarrow{AB} =$ the slope of \overrightarrow{BC} and the point B is common.

\therefore The points A , B and C are collinear.

Example 6 If the points A , B and C are collinear where A (3 , 2) , B (5 , - 1) and C (1 , k) , find the value of k

Solution $\therefore S = \frac{y_2 - y_1}{x_2 - x_1}$

$$\therefore \text{The slope of } \overleftrightarrow{AB} = \frac{-1 - 2}{5 - 3} = \frac{-3}{2}$$

$$\text{, the slope of } \overleftrightarrow{BC} = \frac{k - (-1)}{1 - 5} = \frac{k + 1}{-4}$$

, \therefore A , B and C are collinear , the slope of the straight line is constant for any two points on it.

$$\therefore \text{The slope of } \overleftrightarrow{AB} = \text{the slope of } \overleftrightarrow{BC}$$

$$\therefore \frac{-3}{2} = \frac{k + 1}{-4}$$

$$\therefore 2(k + 1) = 3 \times (-4)$$

$$\therefore 2k + 2 = 12$$

$$\therefore 2k = 10$$

$$\therefore k = 5$$

TRY yourself 2

1 If the slope of the straight line passing through the two points (3 , - 1) , (7 , a) is $\frac{3}{4}$, find the value of a

2 Prove that : $C(-1, 2) \in \overleftrightarrow{AB}$, where A (1 , 3) and B (3 , 4)

2 Prove by yourself [Hint : Prove that the slope of \overleftrightarrow{AC} = the slope of \overleftrightarrow{AB}].

of try by yourself

3

Real life applications on the slope

- We studied before that if there is a linear relation between two variables X and y , then

The slope of the straight line which represents this relation = $\frac{\text{the change in } y\text{-coordinates}}{\text{the change in } x\text{-coordinates}}$

i.e. The slope of the straight line (S) expresses the rate of change of y with respect to X

- In our life, there are many applications which we need to know the rate of change in dealing with them.

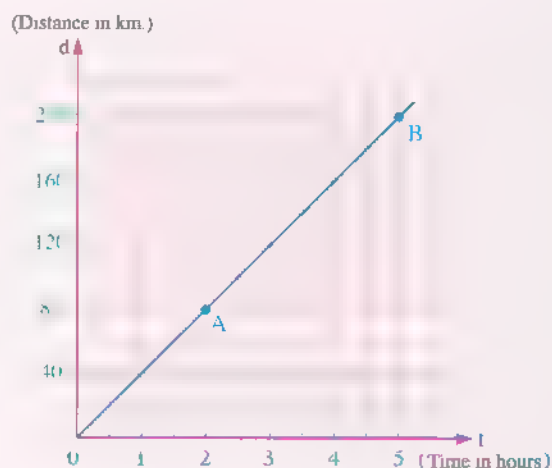

For example:

- 1** If the opposite graph represents the motion of a car, then :

The uniform velocity of the car (v)
= the rate of change of the distance (d) with respect to the time (t)

i.e. The uniform velocity of the car (v)
= the slope of the straight line (S)
and by selecting two points on the straight line as A (2, 80) and B (5, 200)

$$\therefore v = \frac{d_2 - d_1}{t_2 - t_1} = \frac{200 - 80}{5 - 2} = \frac{120}{3} = 40 \text{ km/hr.}$$

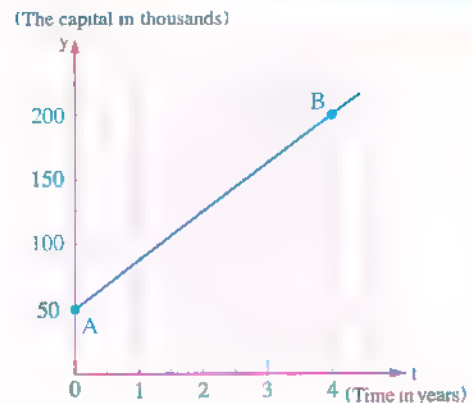

- 2** If the opposite graph represents the change in the capital of a company (y) within the time (t), then :

The rate of change in the capital of the company = the slope of the straight line \overleftrightarrow{AB}

\therefore The rate of change of the capital of the company

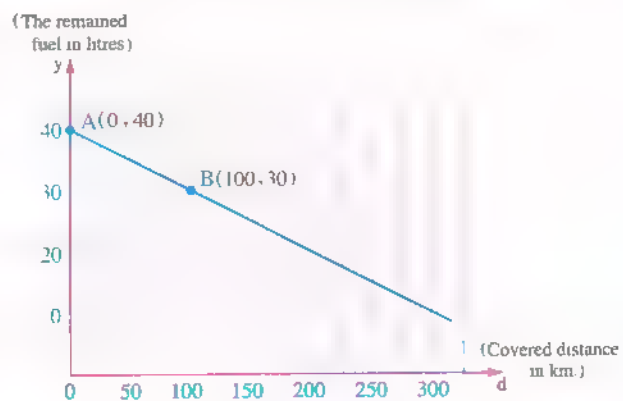

$$= \frac{y_2 - y_1}{t_2 - t_1} = \frac{200 - 50}{4 - 0} \\ = \frac{150}{4} = 37.5 \text{ thousand pounds / year.}$$

i.e. The capital of the company increases in the rate = $37.5 \times 1000 = 37500$ pounds/year.

- 3** A person filled the tank of his car whose capacity is 40 litres with fuel. After he covered a distance 100 km., he found that the remained fuel in the tank = 30 litres.

The opposite figure shows the relation between the covered distance in km. (d) and the amount of the remained fuel in the tank in litres (y), then :

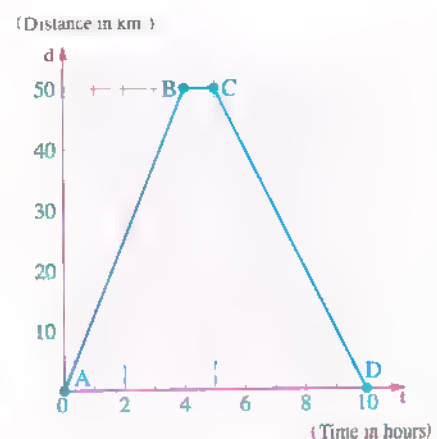

The rate of consumption of fuel = the slope of \overleftrightarrow{AB}

i.e. The rate of consumption of fuel = $\frac{y_2 - y_1}{d_2 - d_1} = \frac{30 - 40}{100 - 0} = \frac{-10}{100} = -\frac{1}{10}$ litre/km.

(The negative sign denotes the amount of fuel decreases in the rate of one litre for each 10 km.)

Example 1 Waleed rode his bicycle from Cairo to Benha, then he returned back to Cairo. The opposite graph represents the bicycle motion during going and returning back :

- 1 Find his velocity in going trip.
- 2 Find his velocity in returning back trip.
- 3 Find the average velocity during all trips.
- 4 What do you say about the horizontal line segment in the graph ?

Solution 1 Taking the two points A (0 , 0) and B (4 , 50)

$$\therefore v \text{ (during going trip)} = \frac{50 - 0}{4 - 0} = 12.5 \text{ km./hr.}$$

2 Taking the two points C (5 , 50) and D (10 , 0)

$$\therefore v \text{ (during returning back trip)} = \frac{0 - 50}{10 - 5} = \frac{-50}{5} = -10 \text{ km./hr.}$$

(The negative sign means that Waleed moved in the opposite direction of his first motion returning back to Cairo with velocity 10 km./hr.)

3 The average velocity = $\frac{\text{the total distance}}{\text{the total time}} = \frac{100}{10} = 10 \text{ km./hr.}$

4 The horizontal line segment in the graph shows that Waleed stopped for an hour after he covered a distance equal to 50 km. , then he returned back to the start point.

Example 2 The following graph shows the change of the capital of a company within 10 years :

- 1 Find the slope of each of \overrightarrow{AB} , \overrightarrow{BC} and \overrightarrow{CD} What is the meaning of each of them ?
- 2 Calculate the capital of the company at the beginning.

Solution $\therefore A (0 , 40) , B (3 , 100) , C (5 , 100)$ and $D (10 , 80)$

1 • The slope of $\overrightarrow{AB} = \frac{100 - 40}{3 - 0} = \frac{60}{3} = 20$

It expresses the increase in the capital of the company within the first three years from the beginning in the rate of 20000 pounds/year.

• The slope of $\overrightarrow{BC} = \frac{100 - 100}{5 - 3} = \frac{0}{2} = 0$

It expresses that the capital of the company is still constant without increasing or decreasing within the fourth and the fifth years from the beginning.

• The slope of $\overrightarrow{CD} = \frac{80 - 100}{10 - 5} = \frac{-20}{5} = -4$

It expresses the decrease in the capital of the company within the last five years in the rate of 4000 pounds/year.

2 $\therefore A(0, 40)$

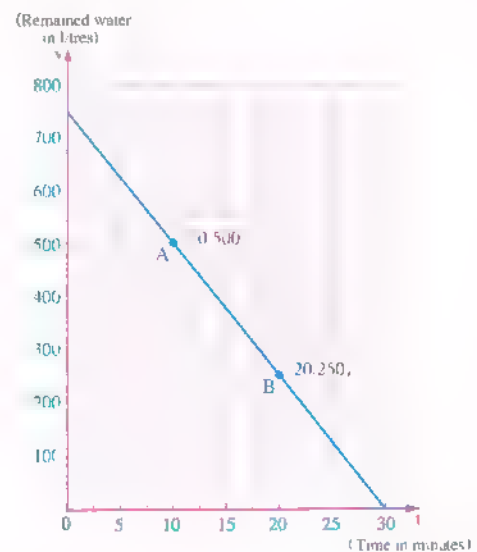

\therefore The capital of the company in the beginning = 40000 pounds.

Example 3

A tank of water is filled with water completely.

A tap is opened below the tank to empty it. The opposite graph represents the relation between the time (t) in minutes and the amount of water remained in the tank (v) in litres :

- 1 What is the greatest capacity of the tank ?
- 2 What is the time needed to empty the tank ?
- 3 What is the amount remained in the tank after 20 minutes ?
- 4 What is the rate of emptying the tank ?

Solution

- 1 From the graph, we find that \overrightarrow{AB} intersects the axis which represents the amount of remained water (v) at the point (0, 750)
 \therefore The greatest capacity of the tank = 750 litres.
- 2 From the graph, we find that \overrightarrow{AB} intersects the axis which represents the time (t) at the point (30, 0)
 \therefore The needed time for emptying the tank is 30 minutes.

3 \therefore The point $(20, 250) \in \overleftrightarrow{AB}$

\therefore After 20 minutes, the remained amount of water in the tank is 250 litres.

4 The rate of emptying the tank = the slope of \overleftrightarrow{AB}

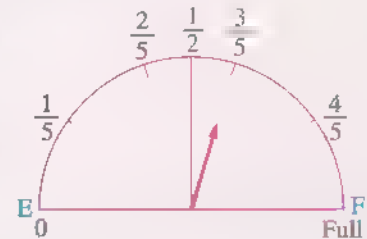

$$= \frac{v_2 - v_1}{t_2 - t_1} = \frac{250 - 500}{20 - 10} = \frac{-250}{10} = -25$$

\therefore The tank is emptied by the rate 25 litres/minute.

Example 4

Hossam filled the tank of his car with fuel given that its capacity is 50 litres.

After Hossam covered a distance 200 km, he noticed that fuel meter shows that the tank has fuel $= \frac{3}{5}$ its capacity.

Graph the relation between the distance covered by the car and the amount of fuel in the tank and calculate the distance covered by the car till the tank becomes empty.

Solution

Let the covered distance = d (km.)

and the remained amount of fuel = y (litres)

\therefore In the beginning, the distance = 0 km.

i.e. $d = 0$ and the amount of fuel in the tank = 50 litres.

i.e. $y = 50$

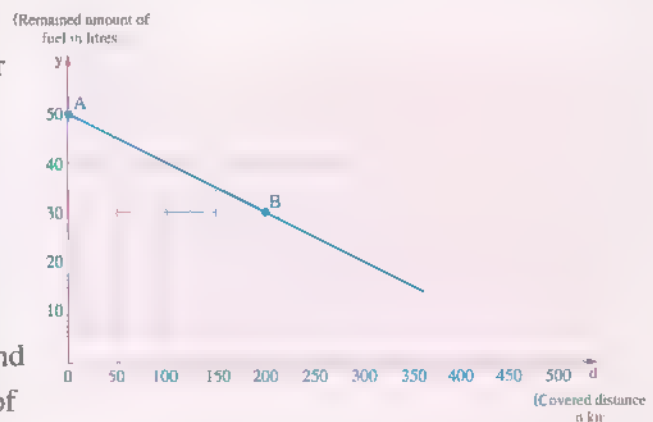

\therefore The point A (0, 50) expresses the amount of fuel in the tank in the beginning of motion.

$\therefore \frac{3}{5}$ the capacity of the tank $= \frac{3}{5} \times 50 = 30$ litres.

\therefore The point B (200, 30)

expresses the amount of fuel in the tank after a covered distance 200 km. from the beginning.

$\therefore \overleftrightarrow{AB}$ represents the relation between the covered distance (d) and the remained amount of fuel in the tank (y)

∴ The rate of decrease of fuel = the slope of \overleftrightarrow{AB}

$$= \frac{y_2 - y_1}{d_2 - d_1} = \frac{30 - 50}{200 - 0} = \frac{-20}{200} = -\frac{1}{10} \text{ litre/km.}$$

i.e. The amount of fuel in the tank decreases with rate of one litre per 10 km.

∴ The covered distance from beginning the motion till the tank becomes empty

$$= \frac{\text{the amount of fuel in the beginning}}{\text{rate of decrease of fuel}} = \frac{50}{\frac{1}{10}} = 50 \times 10 = 500 \text{ km.}$$

! Remark

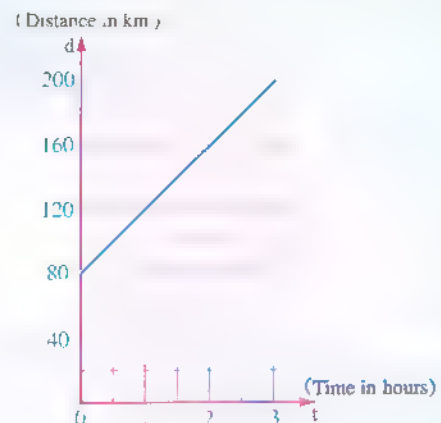

We can find the covered distance from the beginning till the tank becomes empty from the graph by finding the point of intersection of \overleftrightarrow{AB} with the axis which represents the distance d which is $(500, 0)$

i.e. The covered distance by the car when the tank becomes empty = 500 km.

The opposite graph represents the motion of a car measured from a fixed point A :

- 1 Determine the uniform velocity of the car.
- 2 Calculate the covered distance after two hours from the beginning of the motion.

- 1 40 km. / hour
- 2 80 km.

of try by yourself

UNIT

3

Statistics

Lessons of the unit :

1. Collecting and organizing data.
2. The ascending and descending cumulative frequency tables and their graphical representation.
3. Mean.
4. Median.
5. Mode.

► Use your smart phone or tablet to scan the QR Code and enjoy watching videos.

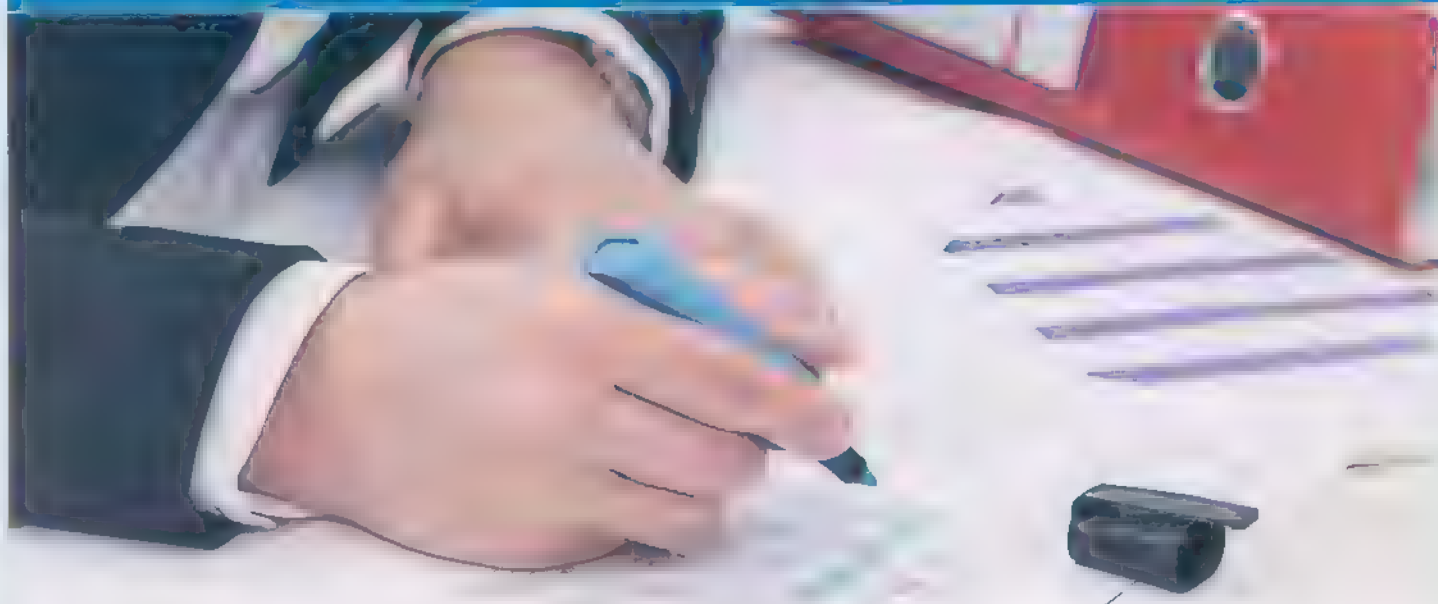

Unit Objectives :

By the end of this unit, student should be able to :

- organize data in frequency tables with sets.
- form each of the ascending and descending cumulative frequency tables.
- graph each of the ascending and descending cumulative frequency tables.
- find the mean of a set of data organized in a frequency table with sets.
- find the median of a frequency distribution with sets.
- calculate the mode from a frequency table with sets.

Collecting and organizing data

In the last year, you knew how to organize data and put them in a simple frequency table, but when summarizing large masses of data, it is useful to distribute them into sets, and determine the number of individuals belonging to each set.

The table consisting of sets and their corresponding frequencies is called “frequency table with sets”. The following example shows how to organize data into a frequency table with sets.

Example

In the following table, these are the marks of 54 students in one of the classes in grade two preparatory in a school, which they took in an exam in mathematics where the full mark is 60

42	54	36	46	34	45	51	40	48
48	40	47	25	48	45	36	56	44
38	47	30	37.5	40	20	42	28	50
47	55	27	45	30	42	51	43	46
29	43	59	35	44.5	32	24	39	54
41	36	45	39	42	58	35	50	45

The required is forming the frequency table with sets.

- 1 Determine the range

(it is the difference between the **greatest mark** and the **smallest mark**)

∴ The smallest mark is 20 and the greatest mark is 59

∴ The range = $59 - 20 = 39$

2 Divide these data into a suitable number of sets of marks , say 10 disjoint sets , the length of each of them is 4 , then you obtain the following sets :

• **The first set :**

The students who obtain 20 marks till less than 24 marks , which is written as (20 –)

• **The second set :**

The students who obtain 24 marks till less than 28 marks , it is written as (24 –)

• **The third set :**

The students who obtain 28 marks till less than 32 marks , it is written as (28 –) and so on till you reach the tenth set.

• **The tenth set :**

The students who obtain 56 marks till less than 60 , it is written as (56 –)

3 Form the tally table as follows :

Sets	Tallies	Frequency
20 –	I	1
24 –	III	3
28 –	IIII	4
32 –	IIII	4
36 –	IIII II	7
40 –	IIII IIII	10
44 –	IIII IIII II	12
48 –	IIII II	7
52 –	III	3
56 –	III	3
Total		54

(The tally table)

- ↓ Omit the tallies column from the table to get the final form of the frequency table with sets. It can be written vertically or horizontally.

The following is the horizontal form of the frequency table :

	20-	24-	28-	32-	36-	40-	44-	48-	52-	56-	Total
Frequency	1	3	4	4	7	10	12	7	3	3	54

From the previous table , we deduce that :

- The set that has the greatest frequency is 44 –
- The set that has the least frequency is 20 –

TRY yourself

The following is the weights of 50 persons :

52	35	40	57	43	40	36	49	43	58
47	48	51	30	59	36	45	41	44	37
42	54	38	55	42	47	46	34	53	44
47	32	41	62	50	39	58	46	43	49
40	41	64	44	54	45	38	40	48	41

Form the frequency table with sets.

2	5	6	11	16	7	3	Frequency
60 -	55 -	50 -	45 -	40 -	35 -	30 -	Sets

of try by yourself

2

The ascending and descending cumulative frequency tables and their graphical representation

Prelude

- In the previous lesson , you learnt how to form a frequency table with sets and how to get some information from it as the following table which represents the distribution of weekly wages of 50 workers in one factory :

Sets of wages	54 –	58 –	62 –	66 –	70 –	Total
No. of workers (Frequency)	5	12	22	7	4	50

From this table , you can know the number of workers (the frequency) in each set.

For example:

- The number of workers whose wages lie between 58 and less than 62 pounds is 12 workers.
- The number of workers whose wages lie between 66 and less than 70 pounds is 7 workers.
- But some other information cannot be obtained directly from this table such as :
 - The number of workers who obtain wages less than 62 pounds.
 - The number of workers who obtain wages equal to 58 pounds or more.
- In order to be able to know such information , you need to study how to form another type of tables called **cumulative frequency tables (ascending and descending)** and this what will be shown in the following examples :

Example 1

The following frequency table shows the weekly wages in pounds of 50 workers in one factory :

Sets of wages	54 –	58 –	62 –	66 –	70 –	Total
No. of workers (Frequency)	5	12	22	7	4	50

Form the ascending cumulative frequency table and represent it graphically , then find :

- 1 The number of workers whose weekly wages are less than 60 pounds.
- 2 The percentage of the number of workers whose weekly wages are less than 60 pounds.

Solution

- Form the ascending cumulative frequency table as follows :

The upper boundaries of sets	Frequency	Sets of wages	54 –	58 –	62 –	66 –	70 –
		Number of workers (Frequency)	5	12	22	7	4
Less than 54	zero	Less than 54 = 0					
Less than 58	5	Less than 58 = 5 + 0 = 5					
Less than 62	17	Less than 62 = 5 + 12 = 17					
Less than 66	39	Less than 66 = 5 + 12 + 22 = 39					
Less than 70	46	Less than 70 = 5 + 12 + 22 + 7 = 46					
Less than 74	50	Less than 74 = 5 + 12 + 22 + 7 + 4 = 50					

The ascending cumulative frequency table.

Notice that :

The ascending cumulative frequency begins with zero and ends at the total frequency.

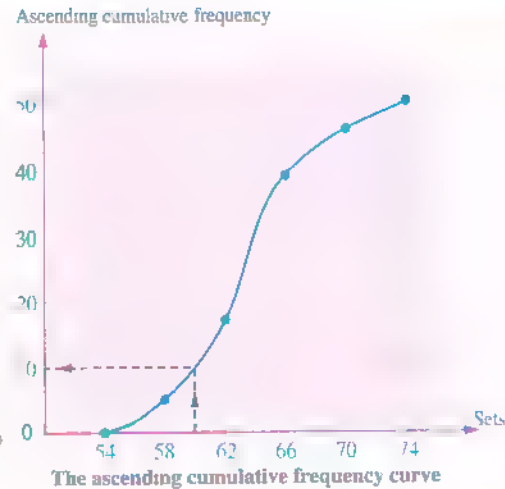

To represent the ascending cumulative frequency table graphically , do as follows :

- Specialize the horizontal axis for sets and the vertical axis for the ascending cumulative frequency.
- Choose a suitable scale to represent data on the vertical axis so that it contains the ascending cumulative frequency easily.

- 3 Represent the ascending cumulative frequency of each set, then draw the graph (the curve) such that it passes through the points which we located as shown in the opposite figure.

• From the graph, we find that :

- 1 The number of workers whose weekly wages are less than 60 pounds = 10 workers.
- 2 The percentage of the number of workers whose weekly wages are less than 60 pounds = $\frac{10}{50} \times 100\%$
= 20%

Example 2

The following frequency table shows the weekly wages of 50 workers in one factory :

Sets of wages	54 -	58 -	62 -	66 -	70 -	Total
No. of workers (Frequency)	5	12	22	7	4	50

Form the descending cumulative frequency table and represent it graphically, then find :

- 1 The number of workers whose weekly wages are 60 pounds or more.
- 2 The percentage of the number of workers whose weekly wages are 60 pounds or more

Solution

• Form the descending cumulative frequency table as follows :

Sets of wages	54 -	58 -	62 -	66 -	70 -	The lower boundaries of sets	Frequency
Number of workers (Frequency)	5	12	22	7	4		
54 and more =	5 + 12 + 22 + 7 + 4 = 50					54 and more	50
58 and more =	12 + 22 + 7 + 4 = 45					58 and more	45
62 and more =	22 + 7 + 4 = 33					62 and more	33
66 and more =	7 + 4 = 11					66 and more	11
70 and more =	4					70 and more	4
74 and more =	0					74 and more	zero

The descending cumulative frequency table

Notice that :

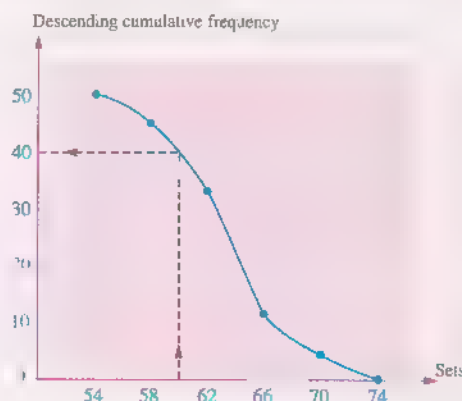

The descending cumulative frequency begins with the total frequency and ends with zero.

- To represent this table graphically , follow the same previous steps in the ascending cumulative frequency table to get the opposite graph.

- From the graph , we find that :

1 The number of workers whose weekly wages are 60 pounds or more = 40 workers.

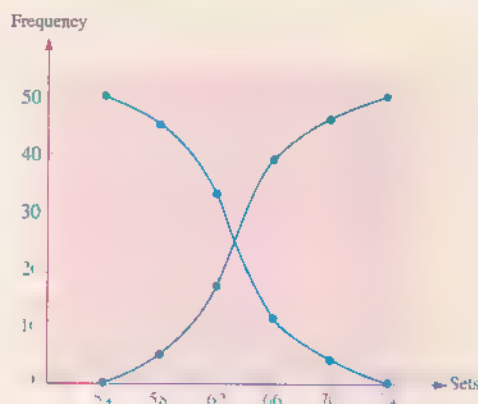

2 The percentage of those workers = $\frac{40}{50} \times 100\% = 80\%$

The descending cumulative frequency curve

! Remark

You can graph the two curves of the ascending and descending cumulative frequency of a frequency distribution in one sketch as shown in the opposite graph.

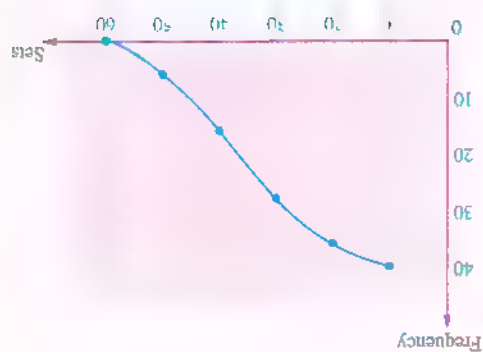

The following table shows the frequency distribution of marks of 40 students in math exam :

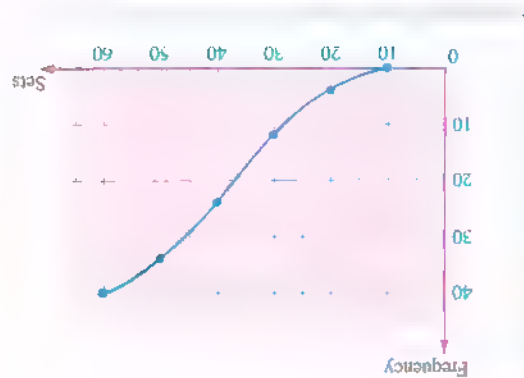

Sets	10 –	20 –	30 –	40 –	50 –	Total
Frequency	4	8	12	10	6	40

Graph each of :

- 1 The ascending cumulative frequency curve.
- 2 The descending cumulative frequency curve.

2

1

You studied last year some of the measures of central tendency of a set of values which are the mean , the median and the mode.

Now you will study how you can find these three measures of a set of data organized in a frequency table with sets.

Remember that

To calculate the mean of a set of values , do as follows :

- 1 Find the sum of these values.
- 2 Divide this sum by the number of these values

i.e. The mean of a set of values = $\frac{\text{The sum of values}}{\text{Number of values}}$

For example:

If the marks of 5 students are 25 , 23 , 21 , 22 , 24

, then the mean of marks = $\frac{25 + 23 + 21 + 22 + 24}{5} = 23$ marks.

Notice that : $23 \times 5 = 115$

, the sum of marks of the 5 students = $25 + 23 + 21 + 22 + 24 = 115$

i.e. The mean is the value which is given to each item of a set , then the sum of these new values is the same sum of the original values.

Finding the mean of data from the frequency table with sets

Example

The following table shows the distribution of the marks of 50 students in mathematics :

Sets	10 –	20 –	30 –	40 –	50 –	Total
Frequency	8	12	14	9	7	50

Find the mean of these marks.

Solution 1 Determine the centres of sets according to the rule :

$$\text{The centre of a set} = \frac{\text{the lower limit} + \text{the upper limit}}{2}$$

$$\therefore \text{then the centre of the first set} = \frac{10 + 20}{2} = 15$$

$$\therefore \text{the centre of the second set} = \frac{20 + 30}{2} = 25 \dots \text{and so on.}$$

Since the lengths of the subsets are equal and each of them = 10 therefore we consider the upper limit of the last set = 60

$$\therefore \text{then its centre} = \frac{50 + 60}{2} = 55$$

2 Form the vertical table :

Set	Centre of the set « X »	Frequency « f »	X × f
10 –	15	8	120
20 –	25	12	300
30 –	35	14	490
40 –	45	9	405
50 –	55	7	385
Total		50	1700

$$3 \text{ The mean} = \frac{\text{The sum of } (X \times f)}{\text{The sum of } f} = \frac{1700}{50} = 34 \text{ marks.}$$

TRY
by yourself

The following table shows the daily wages in pounds of 50 workers in a factory :

Sets	5 –	15 –	25 –	35 –	45 –	Total
Frequency	7	10	12	13	8	50

Find the mean of the wage of the worker in pounds.

31 Pounds.

of try by yourself

4

Median

Remember that

The median is the middle value in a set of values after arranging it ascendingly or descendingly such that the number of values which are less than it is equal to the number of values which are greater than it.

- To find the median of a set of values , do as follows :

Arrange the values ascendingly or descendingly
then

If the values number is **odd**

Then :

The median is the value lying in the middle exactly.

For example:

- If the values are :
42 , 23 , 17 , 30 , 20
- We arrange them ascendingly as follows
17 , 20 , 23 , 30 , 42

The median = 23

If the values number is **even**

Then :

The sum of the two values lying in the middle

The median = $\frac{\text{sum of the two values lying in the middle}}{2}$

For example:

- If the values are :
27 , 13 , 23 , 24 , 13 , 21
- We arrange them ascendingly as follows
13 , 13 , 21 , 23 , 24 , 27

The median = $\frac{21 + 23}{2} = 22$

Finding the median of a frequency distribution with sets graphically

To find the median of a frequency distribution with sets graphically, do the following steps :

- 1 Form the ascending or the descending cumulative frequency table, then draw the cumulative frequency curve of it.
- 2 Find the order of the median = $\frac{\text{The total of frequency}}{2}$
- 3 Determine the point which represents the order of the median on the vertical axis, from this point, draw a horizontal straight line to intersect the curve at a point, then from this point, draw a perpendicular to the horizontal axis to intersect it at a point which represents the median.

The following example shows how to find the median using the two curves (the ascending or the descending cumulative frequency curve).

Example

The following table shows the frequency distribution of marks of 50 students in math exam :

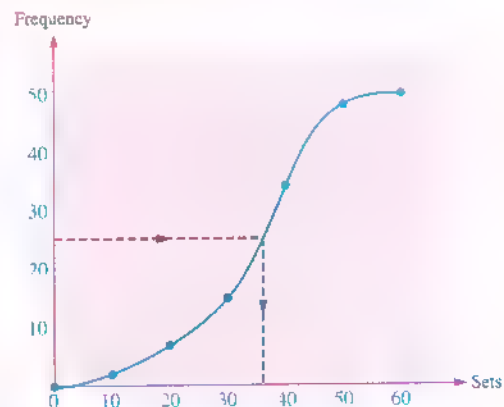

Sets of marks	0	10 –	20	30 –	40 –	50 –	Total
Number of students	2	5	8	19	14	2	50

Find the median mark of the students.

Solution

* First : Using the ascending cumulative frequency curve :

The upper boundaries of sets	Frequency
Less than 0	0
Less than 10	2
Less than 20	7
Less than 30	15
Less than 40	34
Less than 50	48
Less than 60	50

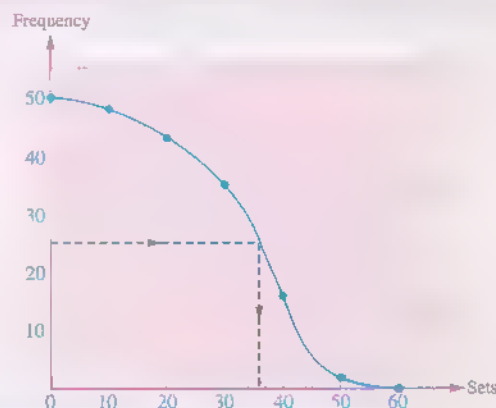

$$\therefore \text{The order of the median} = \frac{50}{2} = 25$$

\therefore From the graph, the median = 36 approximately

* **Second : Using the descending cumulative frequency curve :**

The lower boundaries of sets	Frequency
0 and more	50
10 and more	48
20 and more	43
30 and more	35
40 and more	16
50 and more	2
60 and more	0

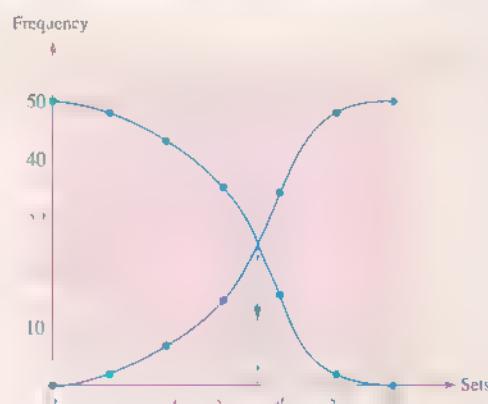

$$\therefore \text{The order of the median} = \frac{50}{2} = 25$$

\therefore From the graph , the median = 36 approximately

! Remark

You can find the median by more accurate method , this by drawing the two curves (the ascending and descending cumulative frequency curves) together in one graph to intersect at one point.

From this point , draw a vertical straight line to meet the horizontal axis at a point which represents the median as shown in the opposite graph to get the median = 36 approximately.

TRY

Using the ascending or descending cumulative frequency curve , find the median of the following frequency distribution :

Sets	4 -	8 -	12 -	16 -	20 -	Total
Frequency	2	4	8	6	4	24

15 approximately.

Remember Understand Apply Problem Solving

1 Complete the following table :

Number a	8	125	-27	$3\frac{3}{8}$	$-\frac{8}{125}$
$\sqrt[3]{a}$	-10		6	-4

2 Complete :

1 $\sqrt[3]{216} = \dots\dots\dots$

3 $\sqrt[3]{0.001} = \dots\dots\dots$

5 $\sqrt[3]{8} + \sqrt[3]{-8} = \dots\dots\dots$

7 $\sqrt[3]{27} - \sqrt[3]{-27} = \dots\dots\dots$

9 $-\sqrt[3]{-1} - \sqrt[3]{1} = \dots\dots\dots$

11 $\sqrt[3]{a^3} = \dots\dots\dots$

13 $\sqrt[3]{\dots\dots\dots} = 4$

15 $|\sqrt[3]{-125}| = \sqrt{\dots\dots\dots}$

2 $\sqrt[3]{-343} = \dots\dots\dots$

4 $\sqrt[3]{-\frac{8}{27}} = \dots\dots\dots$

6 $\sqrt[3]{27} - \sqrt[3]{64} = \dots\dots\dots$

8 $\sqrt[3]{9} + \sqrt[3]{-8} = \dots\dots\dots$

10 $\frac{-\sqrt[3]{64}}{\sqrt[3]{64}} = \dots\dots\dots$

12 $\sqrt[3]{-27 a^6} = \dots\dots\dots$

14 $\sqrt[3]{16} = \sqrt[3]{\dots\dots\dots}$

16 $\sqrt[3]{64 + \dots\dots\dots} = 5$

3 Choose the correct answer from those given :

1 $\sqrt[3]{(-8)^2} = \dots\dots\dots$

- (a) 2 (b) -2 (c) 4 (d) -4

2 $\sqrt[3]{\left(\frac{1}{8}\right)^2} = \dots\dots\dots$

- (a) $\frac{1}{2}$ (b) $\frac{1}{4}$ (c) $\frac{1}{8}$ (d) $\frac{1}{16}$

3 $\sqrt[3]{-64} + \sqrt{16} = \dots\dots\dots$

- (a) zero (b) 8 (c) -8 (d) ± 8

4 $\sqrt{25} - \sqrt[3]{-125} = \dots\dots\dots$

- (a) 10 (b) zero (c) 5 (d) ± 5

5 $\sqrt{(-2)^2} + \sqrt[3]{(-2)^3} = \dots\dots\dots$

- (a) -4 (b) 8 (c) 4 (d) zero

6 $\sqrt[3]{3\frac{3}{8}} + \sqrt{0.25} = \dots\dots\dots$

- (a) $\frac{3}{2}$ (b) $\frac{1}{2}$ (c) 2 (d) -2

7 $\sqrt[3]{0.001 \times \frac{1}{8}} = \dots\dots\dots$

- (a) $\frac{1}{2}$ (b) 2 (c) $\frac{1}{20}$ (d) 20

8 $\sqrt[3]{1000} \times \sqrt[3]{-0.008} = \dots\dots\dots$

- (a) $\frac{1}{2}$ (b) 10 (c) 2 (d) -2

9 $\sqrt[3]{-27} + \sqrt{12\frac{1}{4}} + \sqrt[3]{0.125} = \dots\dots\dots$

- (a) 1 (b) zero (c) -1 (d) $\frac{11}{2}$

10 If $-\sqrt{25} = \sqrt[3]{y}$, then $y = \dots\dots\dots$

- (a) 5 (b) -5 (c) 125 (d) -125

- [11] If $x^3 = 64$, then $\sqrt{x} = \dots\dots\dots$
 (a) 4 (b) -4 (c) 2 (d) -2
- [12] If $x^3 = 27$, then $x^2 = \dots\dots\dots$
 (a) 3 (b) 6 (c) 9 (d) 81
- [13] $\sqrt[3]{x^6} = \sqrt{\dots\dots\dots}$
 (a) x^3 (b) x^2 (c) x (d) x^4
- [14] If $\frac{x}{3} = \frac{9}{x^2}$, then $x = \dots\dots\dots$
 (a) 1 (b) 3 (c) 9 (d) 27

4 Find the value of x in each of the following :

- | | | |
|----------------------------|----------------------------------|-------------------------------|
| [1] $\sqrt[3]{x} = 5$ | [2] $\sqrt[3]{x} = -\frac{1}{4}$ | [3] $\sqrt[3]{x} = -\sqrt{4}$ |
| [4] $\sqrt[3]{x} - 3 = -1$ | [5] $x^3 = -8$ | [6] $x^3 = 64$ |
| [7] $x^3 + 5 = 32$ | [8] $2x^3 = 54$ | [9] $\frac{1}{5}x^3 = -200$ |

5 Find the S.S. of each of the following equations in \mathbb{Q} :

- | | | |
|--------------------------|--------------------------|------------------------------|
| [1] $x^3 + 27 = 0$ | [2] $8x^3 + 7 = 8$ | [3] $x^3 + 16 = \frac{3}{8}$ |
| [4] $2x^3 - 5 = x^3 + 3$ | [5] $(x+3)^3 = 343$ | [6] $(3x+1)^3 = -8$ |
| [7] $(2x+1)^3 - 7 = 20$ | [8] $(5x-2)^3 + 10 = 18$ | |

6 Find each of the following :

- | | | |
|---|---------------------------------|-------------------------------|
| [1] $\sqrt[3]{2\frac{1}{4} \div \frac{2}{3}}$ | [2] $-\sqrt[3]{2^9 \times 3^6}$ | [3] $\sqrt[3]{\sqrt[3]{729}}$ |
| [4] $\sqrt[3]{\sqrt[3]{512}}$ | [5] $\sqrt{27\sqrt[3]{27}}$ | |

Applications

- [7] A cube of volume 27 cm^3 . Find the area of one face. « 9 cm^2 »
- [8] Find the total area of a cube whose volume is 216 cm^3 . « 216 cm^2 »

- 9 If the half of the cube of a number equals 32 , find this number. « 4 »
- 10 Find the inner edge length of a cube vessel with capacity of one litre. « 10 cm »
- 11 Find the diameter length of a sphere whose volume is $\frac{1372}{81} \pi$ cube unit. « $\frac{14}{3}$ length unit »
- 12 Find the length of the diameter of a sphere whose volume is 113.04 cm^3 ($\pi = 3.14$) « 6 cm. »

For excellent pupils

- 13 Find the S.S. of each of the following equations in @ :

1) $(x^2 + 6)^3 = 1000$

3) $\sqrt[3]{(x-1)^2} = \sqrt[3]{25}$

2) $(x^3 - 14)^2 = 169$

4) $\sqrt[3]{(x-2)(x^2 - 4x + 4)} = 3$

- 14 If $\sqrt[3]{\sqrt{x} + 19} = 3$, find the value of $\sqrt[3]{x}$ « 4 »

- 15 A man was asked about the age of his father and the age of each of his three sons.
His answer was as follows :

My age is half the age of my father. The age of my eldest son is the square root of the age of my father and the age of my middle son is the cube root of the age of my father and the age of my youngest daughter is the quotient of the age of my eldest son by the age of my middle son. Given that the age of my eldest son is twice the age of my middle son.

What is the age of each of his father and his three sons ?

The set of irrational numbers

Interactive test

From the school book

Remember Understand Apply Problem Solving

1 In each of the following, show which of them is a rational number and which of them is an irrational number :

1 -5

2 $2\frac{2}{3}$

3 2.06

4 2.3×10^5

5 $-\sqrt{36}$

6 $\sqrt[3]{36}$

7 $\sqrt{7}$

8 zero

9 $|-5|$

10 $\sqrt[3]{-\frac{64}{81}}$

11 $\sqrt{\frac{25}{16}}$

12 $\sqrt{\frac{1}{3}}$

13 $\sqrt[3]{3\frac{3}{8}}$

14 $\sqrt[3]{0.343}$

15 $\frac{\pi}{2}$

16 $(-5)^{\text{zero}}$

17 $\frac{\text{zero}}{3}$

18 $\frac{\sqrt{9}}{\sqrt{4}}$

19 $\sqrt{9} + \sqrt{16}$

20 $\sqrt{4} - \sqrt{11}$

2 Find an approximated value for each of the following numbers :

1 $\sqrt{11}$ "to the nearest hundredth".

2 $\sqrt[3]{7}$ "to the nearest tenth".

3 $\sqrt[3]{-9}$ "to the nearest tenth".

3 Find two consecutive integers for each of the following numbers to be included between them :

1 $\sqrt{5}$

2 $\sqrt{12}$

3 $\sqrt[3]{10}$

4 $\sqrt[3]{-20}$

4 If X is an integer, find the value of X in each of the following cases :

- | | | | |
|--------------------------------|--------|------------------------------|-------|
| 1 $X < \sqrt{2} < X + 1$ | « 1 » | 2 $X < \sqrt{80} < X + 1$ | « 8 » |
| 3 $X < \sqrt[3]{5} < X + 1$ | « 1 » | 4 $X < \sqrt[3]{50} < X + 1$ | « 3 » |
| 5 $X < \sqrt[3]{-100} < X + 1$ | « -5 » | 6 $X < -\sqrt{35} < X + 1$ | « 5 » |

5 Find an approximated value for each of the following numbers, then check your answer using the calculator :

- 1 $\sqrt{20}$ 2 $\sqrt[3]{17}$ 3 $\sqrt{5} + 1$ 4 $\sqrt[3]{9} - 1$

6 Choose the correct answer from the given ones :

- 1 The irrational number in the following numbers is

- (a) $\sqrt{\frac{1}{4}}$ (b) $\sqrt[3]{8}$ (c) $\sqrt{\frac{4}{9}}$ (d) $\sqrt{2}$

If $X = \sqrt{2}$, $y = 2$, then which of the following does not represent a rational number ?

- (a) $X^2 + y$ (b) $X + y^2$ (c) $\sqrt{X^2 y}$ (d) $\sqrt{2} X y$

- 3 The irrational number located between 2 and 3 is

- (a) $\sqrt{10}$ (b) $\sqrt{7}$ (c) 2.5 (d) $\sqrt{3}$

- 4 The irrational number located between -2 and -1 is

- (a) -3 (b) $-1\frac{1}{2}$ (c) $-\sqrt{3}$ (d) $\sqrt{2}$

- 5 $\sqrt{10} \approx$

- (a) 2.99 (b) 3.71 (c) 3 (d) -3.2

- 6 The nearest integer to $\sqrt[3]{25}$ is

- (a) 5 (b) 3 (c) 2 (d) 12.5

- 7 If $n \in \mathbb{Z}_+$, $n < \sqrt{26} < n + 1$, then $n =$

- (a) 25 (b) 5 (c) -5 (d) 24

- 8 The side length of a square whose area is 6 cm^2 is

- (a) a natural number. (b) an integer.
(c) a rational number. (d) an irrational number.

- 9 The area of a square whose side length is $\sqrt{3}$ cm. is cm^2
 (a) $4\sqrt{3}$ (b) 9 (c) 3 (d) 6
- 10 The square whose area is 10 cm^2 , its side length is cm.
 (a) 5 (b) -5 (c) $\sqrt{10}$ (d) $-\sqrt{10}$
- 11 The S.S. of the equation : $(x - \sqrt{5})(x + \sqrt{3}) = 0$ in \mathbb{Q} is
 (a) $\{\sqrt{5}\}$ (b) $\{-\sqrt{3}\}$ (c) $\{-\sqrt{5}, \sqrt{3}\}$ (d) $\{\sqrt{5}, -\sqrt{3}\}$

7 Find the value of x in each of the following cases and determine whether $x \in \mathbb{Q}$ or $x \in \mathbb{Q}$:

1 $5x^2 = 10$	$\langle \pm \sqrt{2} \rangle$	2 $4x^2 = 9$	$\langle \pm \frac{3}{2} \rangle$
3 $x^3 = 125$	$\langle 5 \rangle$	4 $3x^3 = 27$	$\langle \sqrt[3]{9} \rangle$
5 $0.1x^2 = 10$	$\langle \pm 10 \rangle$	6 $0.001x^3 = -8$	$\langle -20 \rangle$
7 $(x-1)^2 = 4$	$\langle 3 \text{ or } -1 \rangle$	8 $(x-5)^3 = 1$	$\langle 6 \rangle$

8 Find in \mathbb{Q} the S.S. of each of the following equations :

1 $x^2 = 13$	2 $x^3 = 16$	3 $\frac{2}{5}x^2 = \frac{25}{2}$
4 $\frac{5}{4}x^3 = -2$	5 $125x^3 - 7 = 20$	6 $\frac{1}{4}x^2 + 2 = 66$
7 $(x^3 + 5)(x^2 - 3) = \text{zero}$	8 $(x + \sqrt{7})(x^3 - 6) = \text{zero}$	

9 Prove that :

- 1 $\sqrt{2}$ is included between 1.4 and 1.5
 2 $\sqrt{11}$ is included between 3.31 and 3.32
 3 $\sqrt[3]{2}$ is included between 1.2 and 1.3
 4 $\sqrt[3]{15}$ is included between 2.4 and 2.5
 5 $\sqrt[3]{-17}$ is included between -2.6 and -2.5
 6 $\sqrt{3} + 1$ is included between 2.7 and 2.8

10 Determine the point that represents each of the following numbers on the number line :

[1] $\sqrt{3}$

[2] $-\sqrt{11}$

[3] $\sqrt{10}$

[4] $\sqrt{5} + 1$

[5] $2 - \sqrt{7}$

11 Draw the number line and label point A which represents $\sqrt{2}$

- Label point B which represents $1 + \sqrt{2}$
- Label point C which represents $1 - \sqrt{2}$

12 Draw the right-angled triangle ABC at B where $AB = 1$ cm. and $BC = 3$ cm. , then use the figure to determine the points that represent the following numbers on the number line :

[1] $\sqrt{10}$

[2] $-\sqrt{10}$

[3] $2 + \sqrt{10}$

[4] $3 - \sqrt{10}$

13 Calculate the side length and the diagonal length of a square whose area equals 10 cm^2

« $\sqrt{10} \text{ cm.}$, $\sqrt{20} \text{ cm.}$ »

Life Application

14 A tree is 3 metres long. Its upper part was broken because of the wind and it made an angle with the surface of the ground. If the length of the left part of the tree is 1 metre , find the distance between the base of the tree and the point of touching of its top with the ground.

« $\sqrt{3} \text{ metres}$ »

For excellent pupils

15 Without using the calculator , prove that $\sqrt{3} + \sqrt{2}$ is included between 3 and 4

The set of real numbers \mathbb{R} and ordering numbers in \mathbb{R}

interactive test

From the school book

Remember Understand Apply Problem Solving

- 1 Complete the following table by placing (✓) in the suitable place as shown in the first case :

The number	Natural	Integer	Rational	Irrational	Real
-5	x	✓	✓	x	✓
$\sqrt{2}$					
$1\frac{1}{2}$					
$\sqrt[3]{9}$					
$ -2 $					
$-\sqrt{4}$					
$\frac{5}{2}$					
0.3					
$\sqrt{-1}$					

- 2 If $x \in \mathbb{R}$, state whether x is positive or negative or anything else in each of the following cases :

1 $x > 0$

2 $x < 0$

3 $x > |-4|$

4 $|-5| < x < 7$

5 $-2 < x < 0$

6 $|-1| < x < |-7|$

3 Put the suitable sign ($>$, $<$ or $=$) :

1 $\sqrt{5} \quad 2$

2 $\sqrt[3]{7} \quad 2.6$

3 $\sqrt[3]{24} \quad 3$

4 $\sqrt[3]{-24} \quad -2$

5 $3 - \sqrt{5} \quad \sqrt[3]{-1}$

6 $\sqrt[3]{8} \quad \sqrt{4}$

7 $1 + \sqrt{3} \quad \sqrt{5}$

8 $\sqrt[3]{3} - 1 \quad 0.2$

9 $\sqrt{2} - 1 \quad 1 - \sqrt{2}$

4 Choose the correct answer from those given :

1 $\mathbb{R} = \dots\dots\dots$

(a) $\mathbb{Q} \cup \mathbb{Q}^c$

(b) $\mathbb{Z}_+ \cup \mathbb{Z}_-$

(c) $\mathbb{R}_+ \cup \mathbb{R}_-$

(d) $\mathbb{N} \cup \mathbb{R}_-$

2 $\mathbb{Q} \cap \mathbb{Q}^c = \dots\dots\dots$

(a) \mathbb{Q}

(b) \mathbb{Q}^c

(c) \mathbb{R}

(d) \emptyset

3 $\mathbb{Q} \cup \mathbb{Q}^c = \dots\dots\dots$

(a) \emptyset

(b) \mathbb{R}

(c) \mathbb{Q}

(d) \mathbb{Q}^c

4 $\mathbb{R}_+ \cap \mathbb{R}_- = \dots\dots\dots$

(a) \emptyset

(b) \mathbb{R}

(c) \mathbb{R}_+

(d) \mathbb{R}_-

5 $\mathbb{R}_+ \cup \mathbb{R}_- = \dots\dots\dots$

(a) \mathbb{R}

(b) \emptyset

(c) \mathbb{R}_+

(d) \mathbb{R}^*

6 $\mathbb{R} - \mathbb{Q} = \dots\dots\dots$

(a) \mathbb{R}

(b) \emptyset

(c) \mathbb{Q}

(d) $\{0\}$

7 $\mathbb{R} - \mathbb{Q} = \dots\dots\dots$

(a) \mathbb{Q}^c

(b) \mathbb{R}

(c) \emptyset

(d) $\{0\}$

8 $\mathbb{R}_+ \cap \{-1, 0, 1\} = \dots\dots\dots$

(a) $\{0, 1\}$

(b) $\{1\}$

(c) $\{0\}$

(d) \emptyset

9 $\{x : x \in \mathbb{R}, x < 0\} = \dots\dots\dots$

(a) \mathbb{R}_+

(b) \mathbb{R}_-

(c) \mathbb{R}^*

(d) \mathbb{R}

10 If x is a negative real number, then which of the following numbers is positive ?

(a) x^2

(b) x^3

(c) $2x$

(d) $\frac{x}{2}$

11 If $\frac{1}{a}$ and $\frac{a}{\sqrt{5}}$ are two real numbers included between 0 and 1, then $a = \dots\dots\dots$

(a) -2

(b) 1

(c) $\sqrt{5}$

(d) 2

12 If $x \in \mathbb{R}_+$, $y \in \mathbb{R}_+$ and $x^2 > y^2$, then $\dots\dots\dots$

(a) $x > y$

(b) $x < y$

(c) $x = y$

(d) $x \leq y$

- 13 $\sqrt{(2-\pi)^2}$ $(2-\pi)$ (where π is the ratio between the circumference of the circle and its diameter length)

(a) = (b) < (c) > (d) \leq

- 14 The S.S. of the equation : $X^2 + 1 = 0$ in \mathbb{R} is

(a) $\{-1\}$ (b) $\{1, -1\}$ (c) $\{1\}$ (d) \emptyset

5 Arrange the following numbers ascendingly :

1 $\sqrt{8}$, $-\sqrt{3}$, $\sqrt{15}$, $\sqrt{5}$, $-\sqrt{7}$ and $-\sqrt{11}$

2 $\sqrt{27}$, $-\sqrt{45}$, $\sqrt{20}$, 0.6 and $\sqrt[3]{-1}$

6 Arrange the following numbers descendingly :

1 $\sqrt{62}$, 8 , $-\sqrt{50}$ and $\sqrt{70}$

2 $\sqrt{6}$, 9 , $-\sqrt{10}$, $-\sqrt{7}$, $-\sqrt{50}$ and $\sqrt{101}$

7 Write three positive irrational numbers less than 2

8 Write three negative irrational numbers greater than $-\sqrt{6}$

9 Write four irrational numbers included between 15 and 17

10 Prove that $\sqrt{3}$ is between 1.7 and 1.8 , then represent $\sqrt{3}$, 1.7 and 1.8 on the number line.

11 Solve the following equations to the nearest hundredth given $X \in \mathbb{R}$:

1 $X^2 - 6 = 0$

2 $\frac{3}{4} X^2 = 24$

3 $\frac{1}{2} X^2 - 5 = 0$

4 $5X^3 + 3 = 2$

5 $\frac{3}{4} X^2 + 2 = -11$

6 $\frac{2}{X^3} + 5 = 21$ ($X \neq 0$)

7 $(X^2 - 9)(X^3 - 5) = 0$

8 $(2X^3 - 5)(X^2 + 1) = 0$

Geometric Applications

- 12 Find the side length of a square whose area is 5 cm^2 . Is the side length a rational number ?

« $\sqrt{5} \text{ cm.}$ »

- 13 Find the edge length of a cube whose volume is 1.728 cm^3 . Is the edge length a rational number ?

« $\frac{6}{5} \text{ cm.}$ »

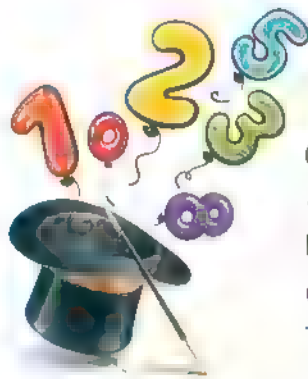

- 14 A cube whose total area is 13.5 cm^2 . Find its edge length. Is the edge length a rational number ?

« 1.5 cm. »

- 15 A square is of side length 6 cm. Find its diagonal length. $\ll \sqrt{72} \text{ cm.} \gg$
- 16 A square is of area 32 cm^2 . Find its side length and its diagonal length. $\ll \sqrt{32} \text{ cm.}, 8 \text{ cm} \gg$
- 17 An isosceles right-angled triangle, the length of one side of its right-angle = 5 cm.
Find the length of its hypotenuse. $\ll \sqrt{50} \text{ cm.} \gg$
- 18 A rectangle with dimensions 5 cm. and 7 cm. Find the length of its diagonal. And if its area equals the area of a square, then find the side length of the square and its diagonal length. $\ll \sqrt{74} \text{ cm.}, \sqrt{35} \text{ cm.}, \sqrt{70} \text{ cm.} \gg$

For excellent pupils

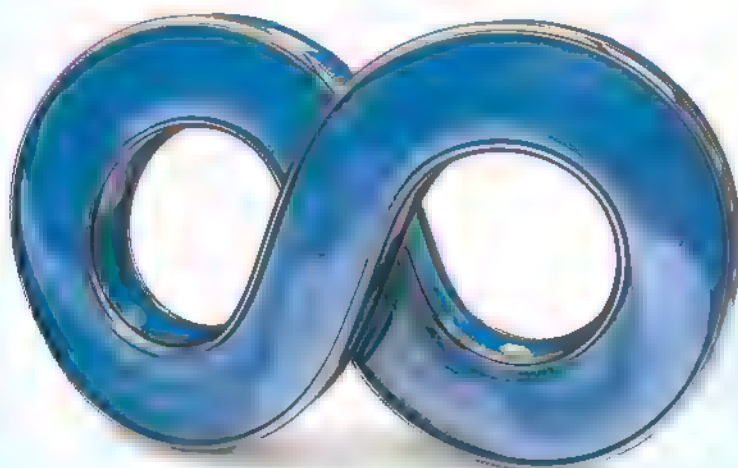

- 19 Without using the calculator, prove that : $\sqrt[3]{3} > \sqrt{2}$
- 20 Two real numbers, the sum of their squares is 7 and the greater number is 2
Find the other number. $\ll \sqrt{3} \text{ or } -\sqrt{3} \gg$

Wonders of numbers

Choose a number from 1 to 9, multiply it by 3, add 3 to the product, and multiply the result by 3 once again "use calculator" Find the sum of the digits of the product.

The answer is always 9.

Remember Understand Apply Problem Solving

1 Complete the following table :

The interval	Expression by description method	Its representation on the number line
1, $[-1, 2]$	$\{x: -1 \leq x \leq 2, x \in \mathbb{R}\}$	
2 $[1, 3[$
3 	$\{x: 0 < x \leq 3, x \in \mathbb{R}\}$
4	
5 $]-\infty, 1]$
6	
7 $] \dots$	$\{x: x < 4, x \in \mathbb{R}\}$
8 $[-2, \infty[$

2 Choose the correct answer from the given ones :

1 $\mathbb{R} = \dots\dots\dots$

(a) $\mathbb{R}_+ \cap \mathbb{R}_-$

(b) $\mathbb{R}_+ \cup \mathbb{R}_-$

(c) $]-\infty, \infty[$

(d) $\mathbb{Q} \cap \mathbb{Q}$

2 $\mathbb{R}_+ = \dots\dots\dots$

(a) $]0, \infty[$

(b) $]-\infty, 0[$

(c) $[0, \infty[$

(d) $]-\infty, 0]$

3 $\mathbb{R}_- = \dots\dots\dots$

- (a) $]0, \infty[$ (b) $] - \infty, 0[$ (c) $[0, \infty[$ (d) $] - \infty, 0]$

4 The set of non-negative real numbers = $\dots\dots\dots$

- (a) $]0, \infty[$ (b) $] - \infty, 0[$ (c) $[0, \infty[$ (d) $] - \infty, 0]$

5 The set of non-positive real numbers = $\dots\dots\dots$

- (a) $]0, \infty[$ (b) $] - \infty, 0[$ (c) $[0, \infty[$ (d) $] - \infty, 0]$

3 Complete each of the following using one of the symbols \in or \notin :

1 $3 \dots [3, 5]$

2 $-2 \dots] - 2, 1]$

3 $0 \dots [-1, 4[$

4 $| - 3 | \dots [2, \infty[$

5 $\sqrt{9} \dots] - 3, \infty[$

6 $\sqrt[3]{-1} \dots] - \infty, 1[$

7 $1.3 \times 10^{-5} \dots \mathbb{R}_+$

8 $\sqrt{2} \dots [2, 5]$

9 $5 \dots] \sqrt{5}, \sqrt{23} [$

10 $\sqrt[3]{-125} \dots] - \sqrt{25}, \sqrt{25}]$

4 If $X = [2, 5[$ and $Y = [-1, 3[$, find using the number line:

1 $X \cup Y$

2 $X \cap Y$

3 $X - Y$

4 $Y - X$

5 \hat{X}

6 \hat{Y}

5 If $X =] - \infty, 3]$ and $Y = [-4, \infty[$, find using the number line:

1 $X \cup Y$

2 $X \cap Y$

3 $X - Y$

4 $Y - X$

5 \hat{X}

6 \hat{Y}

6 If $X = [-1, 4]$, $Y = [3, \infty[$ and $Z = \{3, 4\}$, find the following using the number line:

1 $X \cup Y$

2 $X \cap Y$

3 $X - Y$

4 $X - Z$

5 $Y \cap Z$

6 $Y - X$

7 \hat{X}

8 \hat{Y}

7 Find using the number line:

1 $[-1, 4] \cap [2, 5]$

2 $[-1, 4] \cup [2, 5]$

3 $] - 2, 3] \cap]0, 1[$

4 $] - 2, 3] \cup]0, 1[$

5 $[2, 6] - [-1, 3[$

6 $[-1, 3[- [2, 6]$

7 $[-3, 0[\cup]0, 2]$

8 $[-3, 0] \cap]0, 2]$

9 $[1, 2] - [-2, 4]$

10 $[-2, 4] - [1, 2]$

11 $[-1, 4] \cap [5, 7[$

12 $[-1, 5] -] - 1, 5[$

8 Find using the number line :

1 $[-1, \infty[\cup [-3, 4]$

3 $]-\infty, 3] \cap [-4, \infty[$

5 $]-\infty, 3] - [-1, \infty[$

7 $]-\infty, 2] -]-\infty, 0]$

2 $[2, \infty[\cap]-2, 3[$

4 $[2, \infty[\cup]-\infty, 3]$

6 $]-\infty, -3] - [-3, 1]$

8 $]-\infty, 3[\cup]4, \infty[$

9 Complete the following :

1 $[3, 5] \cup \{3, 5\} = \dots\dots\dots$

3 $[3, 5] \cap \{3, 5\} = \dots\dots\dots$

5 $[3, 5] - \{3, 5\} = \dots\dots\dots$

7 $\{3, 5\} - [3, 5] = \dots\dots\dots$

9 $]3, 5[\cup \{3\} = \dots\dots\dots$

11 $]2, 5[\cap \{-2, 3, 4\} = \dots\dots\dots$

2 $]3, 5[\cup \{3, 5\} = \dots\dots\dots$

4 $]3, 5[\cap \{3, 5\} = \dots\dots\dots$

6 $]3, 5[- \{3, 5\} = \dots\dots\dots$

8 $\{3, 5\} -]3, 5[= \dots\dots\dots$

10 $[3, 5] - \{5\} = \dots\dots\dots$

12 $]-3, 5] \cup \{-2, 3, 4\} = \dots\dots\dots$

10 Complete the following :

1 $]1, 7[\cup]3, 5[= \dots\dots\dots$

3 $[3, 4[\cup]3, 4[= \dots\dots\dots$

5 $[3, 5] - [3, 5[= \dots\dots\dots$

7 $[2, 7] -]2, 7[= \dots\dots\dots$

9 If $X \cap [2, 7] = [3, 4[$, then $X = \dots\dots\dots$

10 If x is a positive real number, then $x > x^2$ when $x \in] \dots\dots\dots , \dots\dots\dots [$

2 $]-3, 2] - [0, 2] = \dots\dots\dots$

4 $]2, 5] \cap [2, 5[= \dots\dots\dots$

6 $[3, 7] - [4, 7] = \dots\dots\dots$

8 $[-2, 4] \cap [4, 6] = \dots\dots\dots$

11 Choose the correct answer from the given ones :

1 $[-3, 4] - \{-3, 5\} = \dots\dots\dots$

(a) $]-3, 4[$

(b) $] -3, 4]$

(c) $]-3, 5[$

(d) $[-3, 5[$

2 If $x \in [-3, \infty[$, then $\dots\dots\dots$

(a) $x < -3$

(b) $x \leq -3$

(c) $x > -3$

(d) $x \geq -3$

- 3 If $X = \{x : x \in \mathbb{R}, 2 < x \leq 5\}$, then $[3, 4]$ X
 (a) \in (b) \notin (c) \subset (d) $\not\subset$
- 4 $\{3\} \cap [3, 6] = \dots$
 (a) \emptyset (b) $\{3\}$ (c) $]3, 6]$ (d) $\{6\}$
- 5 $\{8, 9, 10\} -]8, 10[= \dots$
 (a) \emptyset (b) $\{8, 10\}$ (c) $\{9\}$ (d) \mathbb{N}
- 6 The sum of all real numbers in $[-75, 75]$ is
 (a) -75 (b) 75 (c) 150 (d) zero

12 Complete the following :

- | | | |
|--|--|---------------------------------------|
| 1 $\mathbb{R} \cap [-3, 3] = \dots$ | 2 $\mathbb{R} \cup]-1, 4] = \dots$ | 3 $\mathbb{R} - [-1, \infty[= \dots$ |
| 4 $\mathbb{R}_- - [-3, 1] = \dots$ | 5 $] -2, 5] - \mathbb{R}_+ = \dots$ | 6 $[-2, 2] - \mathbb{R}_- = \dots$ |
| 7 $] -3, 2] \cap \mathbb{Z}_+ = \dots$ | 8 $\mathbb{N} \cap [-5, 2[= \dots$ | 9 $\mathbb{Z} \cap [-1, 3[= \dots$ |
| 10 $\mathbb{R}_+ \cap [0, 5] = \dots$ | 11 $\mathbb{R}_- \cap [-3, 2] = \dots$ | |

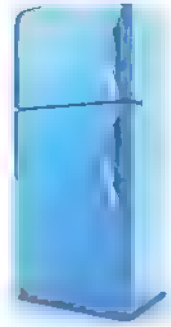

13 Choose from column (B) the suitable interval which represents the figure in column (A) :

(A)	(B)
1 	$\mathbb{R} -]-3, 1]$
2 	$\mathbb{R} - [-3, 1[$
3 	$\mathbb{R} -]-3, 1[$
4 	$[-3, 3[- \{1\}$
5 	$[-3, 1[$
	$] -3, 1[$

Life Application

- 14 Two kinds of food, the first kind needs to be kept in a temperature between -3 and 4 degrees and the other kind needs to be kept in a temperature between 2 and 10 degrees.

What is the temperature needed to keep the two kinds altogether at the same place?

For excellent pupils

- 15 Choose the correct answer from the given ones :

1 In the opposite figure :

If x is a real number, then $x \in$

- (a) \mathbb{R}_- (b) \mathbb{R}_+ (c) $]-\infty, -1]$ (d) $]-\infty, -1[$

2 If $x \in [-3, 4]$, then $x^2 \in$

- (a) $[9, 16]$ (b) $[0, 9]$ (c) $[0, 16]$ (d) $[-9, 0]$

3 If $x \in [-5, 4]$, then $x^2 \in$

- (a) $[0, 16]$ (b) $[16, 25]$ (c) $[0, 25]$ (d) $[-5, 0]$

4 If $x \in [1, 16]$, then $-\sqrt{x} \in$

- (a) $[1, 4]$ (b) $[-1, 4]$ (c) $[-4, -1]$ (d) $[-4, 0]$

5 If $x \subset \mathbb{R}$, $[2, 5] - x =]2, 5[$, then $x =$..

- (a) $[2, 5]$ (b) $\{2, 5\}$ (c) $[2, 5[$ (d) $]2, 5]$

6 If $x \subset \mathbb{R}$, $]4, 7] \cup x = [1, 7]$, then $x =$

- (a) $[1, 3[$ (b) $[1, 3]$ (c) $[1, 4[$ (d) $[1, 5]$

7 If $M \subset \mathbb{R}$, $M \cap [3, 8[= [3, 8[$, then $M =$

- (a) $]3, 8[$ (b) $]3, 8]$ (c) $[3, 9]$ (d) $[3, 7]$

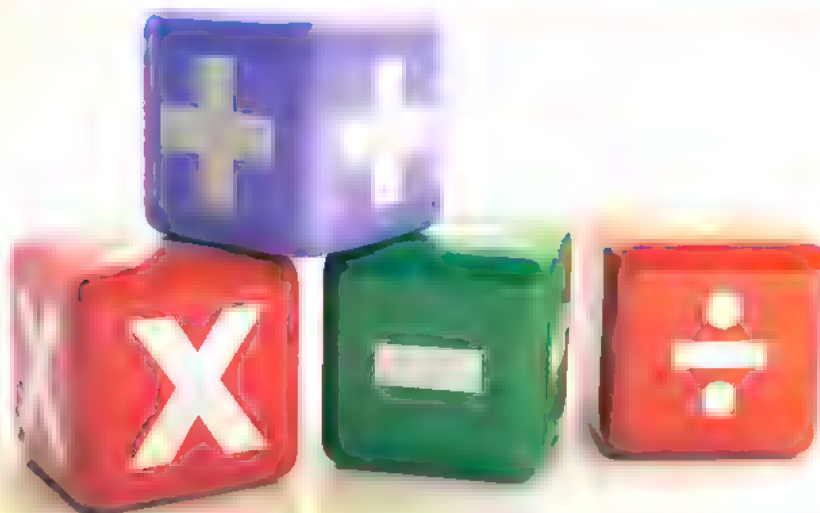

8 If $]-\infty, k[\cap [-2, 5] = [-2, 3[$, then $k =$

- (a) -2 (b) 5 (c) 3 (d) zero

9 If $[-1, x] \cap [y, 5] = [2, 3]$, then $x^y =$

- (a) 8 (b) $\frac{1}{5}$ (c) 9 (d) -1

- 16 If $x \cap y = [4, 7]$, $x \cup y = [3, 7]$ and $x \subset y$, find : x , y and $y - x$

● Remember ● Understand ○ Apply ● Problem Solving

1 Find each of the following in the simplest form :

1 $\sqrt{3} + 2\sqrt{3}$

2 $2\sqrt{5} - 3\sqrt{5} + \sqrt{5}$

3 $5^3\sqrt{7} - 8^3\sqrt{7} + 2^3\sqrt{7}$

4 $4\sqrt{5} - 2\sqrt{5} + 5\sqrt{5} - \sqrt{5}$

2 Find each of the following in the simplest form :

1 $\sqrt{5} - \sqrt{3} + 2\sqrt{5} + \sqrt{3}$

2 $2\sqrt{3} + 5 + \sqrt{3} - 6$

3 $2\sqrt{7} - 3\sqrt{2} + \sqrt{7} + 5\sqrt{7}$

4 $2\sqrt{2} - 3^3\sqrt{2} + 5\sqrt{2} + 3^3\sqrt{2}$

5 $\frac{1}{4}\sqrt{2} + \frac{2}{7}\sqrt{5} + \frac{3}{4}\sqrt{2} - \frac{2}{7}\sqrt{5}$

6 $8\sqrt{\frac{1}{4}} + 2^3\sqrt{3} - \sqrt[3]{64} - 5^3\sqrt{3}$

3 Find the result of each of the following :

1 $\sqrt{3} \times \sqrt{3}$

2 $-2\sqrt{5} \times 3\sqrt{5}$

3 $2 \times 3\sqrt{2}$

4 $\frac{1}{3}\sqrt{3} \times \sqrt{3}$

5 $(\sqrt[3]{5})^3 \times 3\sqrt{3}$

6 $2\sqrt{3} \times \frac{2\sqrt{7}}{7} \div \frac{20\sqrt{3}}{5\sqrt{7}}$

4 Find the result of each of the following in the simplest form :

1 $2(\sqrt{2} + \sqrt{5})$

2 $\sqrt{2}(5 + \sqrt{2})$

3 $\sqrt{7}(\sqrt{7} + 2)$

4 $-\sqrt{3}(-5 - \sqrt{3})$

5 $-2\sqrt{5}(3 - \sqrt{5})$

6 $\sqrt{7}\left(\frac{2}{\sqrt{7}} - \sqrt{7} + 3\right)$

7 $-3(8 + 2\sqrt{3}) + 6\sqrt{3}$

8 $\sqrt{5}(3 - \sqrt{5}) - 2(1 + \sqrt{5})$

5 Find the result of each of the following operations :

1  $(\sqrt{2} + 1)(\sqrt{2} - 1)$

2 $(4 - 3\sqrt{2})(4 + 3\sqrt{2})$

3 $(\sqrt{5} - 1)^2$

4 $(2\sqrt{3} + 4)^2$

5  $(\sqrt{3} + 2)(\sqrt{3} - 1)$

6 $(5 - \sqrt{3})^2 - 28$

6 Make the denominator in each of the following an integer :

1 $\frac{3}{\sqrt{3}}$

2  $\frac{10}{\sqrt{5}}$

3  $-\frac{6}{\sqrt{3}}$

4  $\frac{8}{\sqrt{6}}$

5 $\frac{2}{3\sqrt{2}}$

6  $\frac{6}{2\sqrt{3}}$

7  $\frac{25}{2\sqrt{10}}$

8  $\frac{\sqrt{2} + 3}{\sqrt{2}}$

9 $\frac{\sqrt{5} - 15}{2\sqrt{5}}$

7 Choose the correct answer from those given :

1 $\sqrt{7} + \sqrt{7} = \dots\dots\dots$

(a) 7

(b) 14

(c) $2\sqrt{7}$

(d) $\sqrt{14}$

2 $\sqrt{3} + (-\sqrt{3}) = \dots\dots\dots$

(a) $2\sqrt{3}$

(b) $2\sqrt{6}$

(c) $\sqrt{6}$

(d) zero

3  $2\sqrt{3} + 3\sqrt{3} = \dots\dots\dots$

(a) $5\sqrt{6}$

(b) $5\sqrt{3}$

(c) $6\sqrt{3}$

(d) $5^3\sqrt{3}$

4  $5 + 7\sqrt{2} - 4 + \sqrt{2} = \dots\dots\dots$

(a) 15

(b) $1 + 7\sqrt{2}$

(c) $1 + 8\sqrt{2}$

(d) $1 + 6\sqrt{2}$

5  $-2\sqrt{3} \times \sqrt{3} = \dots\dots\dots$

(a) -6

(b) $-2\sqrt{3}$

(c) $2\sqrt{3}$

(d) 6

6  $(2^3\sqrt{5})^3 = \dots\dots\dots$

(a) 10

(b) 20

(c) $4^3\sqrt{5}$

(d) 40

7 The additive inverse of the number $\frac{6}{\sqrt{2}}$ is $\dots\dots\dots$

(a) $-2\sqrt{3}$

(b) $2\sqrt{3}$

(c) $-3\sqrt{2}$

(d) $3\sqrt{2}$

8 The additive inverse of the number $(\sqrt{2} - \sqrt{5})$ is $\dots\dots\dots$

(a) $\sqrt{2} + \sqrt{5}$

(b) $\sqrt{5} - \sqrt{2}$

(c) $\sqrt{2} - \sqrt{5}$

(d) $-\sqrt{2} - \sqrt{5}$

- 9 The multiplicative inverse of the number $\sqrt[3]{5}$ is .
 (a) -5 (b) $\frac{-1}{5}$ (c) $\frac{5}{\sqrt[3]{5}}$ (d) $\frac{\sqrt[3]{5}}{5}$

- 10 The multiplicative inverse of the number $\frac{\sqrt[3]{2}}{6}$ is ...
 (a) $\sqrt[3]{3}$ (b) $3\sqrt[3]{2}$ (c) $\sqrt[3]{6}$ (d) $\frac{\sqrt[3]{2}}{2}$

- 11 $(\sqrt[3]{5} + 3\sqrt[3]{5}) \div \sqrt[3]{5} = \dots\dots\dots$
 (a) $3\sqrt[3]{5}$ (b) 3 (c) 5 (d) 4

- 12 If $x = \sqrt[3]{2} + 10$, $y = \sqrt[3]{2} - 10$, then $(x + y)^2 = \dots\dots$
 (a) 4 (b) 6 (c) 8 (d) $4\sqrt[3]{2}$

8 Complete the following :

- The multiplicative neutral in \mathbb{R} is ... and the additive neutral in \mathbb{R} is ...

- The additive inverse of the number $1 - \sqrt[3]{2}$ is ...

- 3 The multiplicative inverse of the number $\frac{2\sqrt[3]{3}}{5}$ is $\frac{\dots}{6}$.

- 4 The multiplicative inverse of the number $\frac{3}{\sqrt[3]{3}}$ is $\frac{\dots}{\sqrt[3]{3}}$.

- 5 $7 + \sqrt[3]{3} = 5 + (\dots\dots\dots + \dots\dots)$

- If $a = \frac{\sqrt[3]{2}}{\sqrt[3]{3}}$, $b = \frac{\sqrt[3]{3}}{\sqrt[3]{2}}$, then $\frac{a}{b} = \dots\dots\dots$

- $(\sqrt[3]{3} - 2)^2 = 7 - \dots\dots\dots$

- 8 If $\sqrt[3]{x} = \sqrt[3]{2} + 1$, then $x = \dots\dots\dots$

- 9 If $x^2 = (2\sqrt[3]{3} - \sqrt[3]{7})(2\sqrt[3]{3} + \sqrt[3]{7})$, then $x = \dots\dots\dots$

- 10 If $x^2 - y^2 = 16$, $x - y = \sqrt[3]{2}$, then $x + y = \dots\dots\dots$

- 11 If the side length of a square is ℓ cm. and its area is 15 cm^2 , then the area of the square of side length 2ℓ cm. is ...

- If $a \in \mathbb{R}$ and $b \in \mathbb{R}$, then $a - b$ means the sum of the number a and ... of the number b

- 13 If $a \in \mathbb{N}$, $b \in \mathbb{Q}$ and $c \in \mathbb{R}$, then $a + b + c \in \dots\dots\dots$

- 9 If $x = \sqrt{5} - 2$ and $y = \sqrt{5} + 2$, find the value of each of the following :

1 $x + y$

2 $x - y$

3 xy

4 $x^2 - y^2$

5 $x^2 + 2xy + y^2$

6 $x^2 - 2xy + y^2$

- 10 If $x = \sqrt[3]{2\sqrt{2}}$, find the value of : $(x + \sqrt{2})^2$

« 8 »

- 11 If $\frac{a}{2\sqrt{2}+2} = \frac{b}{2\sqrt{2}-2} = 1$ Prove that : $a \times b = a - b$

- 12 If $x = \sqrt{15} + 2$ and $y = 4 - \sqrt[3]{25}$, estimate the value of each of the following :

1 x, y

2 $x \times y$

3 $x + y$

Check the reasonability of each value using your calculator.

Geometric Application

- 13 A rectangle is of dimensions $(6 + \sqrt{5})$ cm. and $(6 - \sqrt{5})$ cm.

Calculate its perimeter and its area.

« 24 cm. , 31 cm² »

For excellent pupils

- 14 If $a - b = 2\sqrt{3}$, find the value of : $a(a - b)^3 + b(b - a)^3$

« 144 »

- 15 If the multiplicative inverse of the number $\sqrt{a} - 1$ is $\frac{\sqrt{a} + 1}{4}$, find the numerical value of a

« 5 »

- 16 If $x = 2y = 4z = \sqrt{2}$, find the value of : $x^2 + 2y^2 + 4z^2$

« $3\frac{1}{2}$ »

- 17 If the number y is the additive inverse of x and $\frac{1}{2}(y - x) = 1 - \sqrt{2}$

Prove that : $xy - 2\sqrt{2} = -3$

Wonders of numbers

➤ $1 \times 1 = 1$

➤ $11 \times 11 = 121$

➤ $111 \times 111 = 12321$

 (a) $\frac{1}{2}$ (b) 2 (c) -2 (d) 4
- 8 The multiplicative inverse of the number $\sqrt{50}$ is $\dots\dots\dots$
 (a) $\frac{\sqrt{2}}{10}$ (b) $\frac{-\sqrt{2}}{10}$ (c) $-5\sqrt{2}$ (d) $5\sqrt{2}$
- 9 If $x = \frac{\sqrt{6}}{\sqrt{2}}$, then $x^{-1} = \dots\dots\dots$
 (a) $\sqrt{3}$ (b) $\frac{\sqrt{3}}{2}$ (c) $\frac{\sqrt{3}}{3}$ (d) $2\sqrt{3}$
- 10 If $x = \sqrt{7} + \sqrt{3}$ and $y = \sqrt{28} + \sqrt{12}$, then $x = \dots\dots\dots$
 (a) y (b) $\frac{1}{2}y$ (c) $2y$ (d) y^2

8 Complete the following :

$$\frac{3\sqrt{2}}{2\sqrt{18}} = \dots\dots\dots \quad \left| \quad 2 \quad \sqrt{3} \times \sqrt{6} = 3 \times \dots\dots\dots \right.$$

$$3 \quad \frac{1}{2}\sqrt{48} = 2 \times \dots\dots\dots \quad \left| \quad 4 \quad \sqrt{3 \frac{3}{8}} = \frac{3}{2}\sqrt{\dots\dots\dots} \right.$$

5 If $2\sqrt{27} - 2\sqrt{48} = x\sqrt{3}$, then $x = \dots\dots\dots$

6  $\sqrt{5}, \sqrt{20}, \sqrt{45}, \sqrt{80}, \dots\dots\dots$ (in the same pattern).

7 If $x^2 = \frac{8}{9}$, then x in the simplest form = $\dots\dots\dots$

8  If $x^2 = 5$, then $(x + \sqrt{5})^2 = \dots\dots\dots$ or $\dots\dots\dots$

9  Find the value of each of $x + y$, $x \times y$ in each of the following cases :

1 $x = 3 + \sqrt{5}$, $y = 1 - \sqrt{5}$ « 4, -2-2 $\sqrt{5}$ »

2 $x = \sqrt{3} - \sqrt{2}$, $y = \sqrt{3} + \sqrt{2}$ « 2 $\sqrt{3}$, 1 »

3 $x = 5 - 3\sqrt{2}$, $y = 5 - 3\sqrt{2}$ « 10-6 $\sqrt{2}$, 43-30 $\sqrt{2}$ »

10 If $x = \frac{\sqrt{2}}{\sqrt{3}}$ and $y = \frac{\sqrt{3}}{\sqrt{2}}$, find the value of : $6(x + y)$ « 5 $\sqrt{6}$ »

11 If $x = \frac{10}{\sqrt{5}}$, $y = \sqrt{45} + \sqrt{2}$ and $z = \sqrt{8} + \sqrt{5}$,
 find in the simplest form the value of the expression $(x - y + z)^2$ « 2 »

12 If $x = 2\sqrt{5} + \sqrt{2}$, $y = 2\sqrt{5} - \sqrt{2}$

, find the value of the expression : $x^2 + 2xy + y^2$

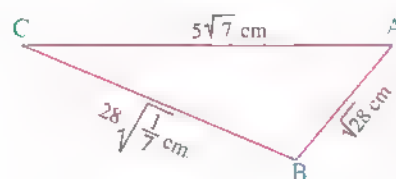

« 80 »

13 If $x = \sqrt{7} + \frac{1}{2}\sqrt{12}$ and $y = \frac{1}{3}\sqrt{63} - \sqrt{3}$, prove that : $x^2 y^2 = 16$

Geometric Applications

14 In the opposite figure :

Find the perimeter of $\triangle ABC$ in the simplest form.

« $11\sqrt{7}$ cm. »

15 Each of the following figures consists of squares equal in area. Find the perimeter of each figure in the simplest form if its area is known :

1

Its area = 300 cm^2

2

Its area = 72 cm^2

3

Its area = 40 cm^2

« $70\sqrt{2}$ cm. , $28\sqrt{3}$ cm. , $24\sqrt{2}$ cm. »

For excellent pupils

16 If $a^x = 6$ and $a^{-y} = \sqrt{3}$, find the value of : a^{x+y}

« $2\sqrt{3}$ »

17 Simplify each of the following to the simplest form :

1 $\frac{(\sqrt{5})^3 \times (\sqrt{5})^5}{(\sqrt{10})^6}$

« $\frac{5}{8}$ »

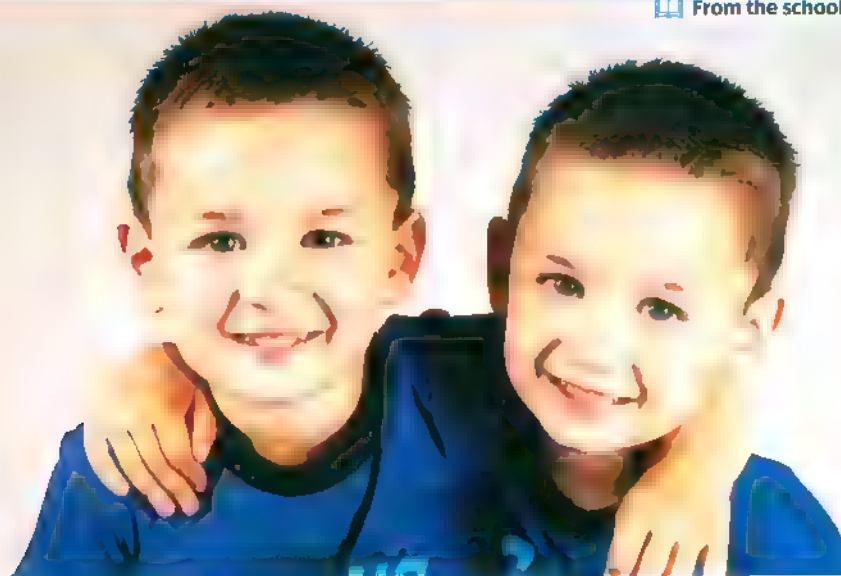

2 $\frac{2\sqrt{2} \times (\sqrt{6})^{-3}}{(\sqrt{3})^{-3}}$

« 1 »

18 If $\sqrt{27} + 2\sqrt{\frac{1}{2}} + \sqrt{18} + \sqrt{12} - \sqrt{50} = x\sqrt{2} + y\sqrt{3}$

, find the value of each of x and y where x and y are two rational numbers.

« -1 , 5 »

Remember Understand Apply Problem Solving

1 Write the conjugate number of each of the following numbers :

1 $\sqrt{5} + \sqrt{3}$

2 $5 - 2\sqrt{7}$

3 $\sqrt{5} + \frac{2}{\sqrt{2}}$

2 Make the denominator of each of the following a rational number :

1 $\frac{5}{\sqrt{7} - \sqrt{2}}$

2 $\frac{\sqrt{3}}{2 - \sqrt{3}}$

3 $\frac{\sqrt{7} + 3}{\sqrt{7} - 3}$

3 If $x = \frac{2}{\sqrt{7} - \sqrt{5}}$ and $y = \sqrt{7} - \sqrt{5}$, find the value of : $(x + y)^2$ « 28 »

4 If $x = \frac{4}{\sqrt{7} - \sqrt{3}}$ and $y = \frac{4}{\sqrt{7} + \sqrt{3}}$, find the value of : $x^2 y^2$ « 16 »

5 If $x = \sqrt{5} + \sqrt{3}$, prove that : $\frac{4}{x} + 2x = 4\sqrt{5}$

6 If $a = \sqrt{3} + \sqrt{2}$ and $b = \frac{1}{\sqrt{3} + \sqrt{2}}$, find the value of : $a^2 - b^2$ in its simplest form. « $4\sqrt{6}$ »

7 If $x = \sqrt{5} - \sqrt{3}$ and $y = \frac{2}{\sqrt{5} - \sqrt{3}}$, find the value of : $x^2 + 2xy + y^2$ « 20 »

8 If $x = \sqrt{5} - \sqrt{2}$ and $y = \frac{3}{\sqrt{5} - \sqrt{2}}$, prove that x and y are conjugate numbers, then find the value of : $x^2 - 2xy + y^2$ « 8 »

9 If $x = 3 + \sqrt{5}$ and $y = \frac{4}{3 + \sqrt{5}}$, prove that x and y are conjugate numbers, then find :

1 Their product.

2 $x^2 + y^2$

« 4, 28 »

10 If $x = \frac{2}{\sqrt{5} - \sqrt{3}}$ and $y = \frac{2}{\sqrt{5} + \sqrt{3}}$, find the value of : $x^2 - xy + y^2$

« 14 »

11 If $x = \sqrt{5} + \sqrt{2}$ and $y = \sqrt{5} - \sqrt{2}$, find the value of : $\frac{x+y}{xy-1}$ in its simplest form. « $\sqrt{5}$ »

12 If $a = \frac{4}{\sqrt{7} - \sqrt{3}}$ and $b = \frac{4}{\sqrt{7} + \sqrt{3}}$, find the value of : $\frac{a-b}{ab}$

« $\frac{\sqrt{3}}{2}$ »

13 If $x = 2\sqrt{2} - \sqrt{3}$ and $y = \frac{5}{\sqrt{8} - \sqrt{3}}$

, prove that x and y are conjugate numbers and calculate : $\frac{x+y}{xy}$

« $\frac{4\sqrt{2}}{5}$ »

14 If $x = \frac{5\sqrt{2} + 3\sqrt{5}}{\sqrt{5}}$ and $y = \frac{2\sqrt{5} - 3\sqrt{2}}{\sqrt{2}}$

, find the value of each of : 1 $x^2 + y^2$

2 xy

« 38, 1 »

, then prove that : $x^2 + y^2 = 38xy$

15 If $x = \frac{1}{2 + \sqrt{3}}$ and $y = \frac{12}{\sqrt{3}}$, find the value of : $x^2 + y$

« 7 »

16 If $x = \frac{1}{\sqrt{3} - \sqrt{2}}$ and y is the multiplicative inverse of x

, find y , then prove that : $(x+y)^2 = 12$

« $\sqrt{3} - \sqrt{2}$ »

17 If $x = \sqrt{13} + \sqrt{6}$, $xy = 1$, find the value of : $x^2 - 49y^2$

« $4\sqrt{78}$ »

18 If $x = \frac{4}{\sqrt{7} - \sqrt{3}}$ and $y^{-1} = \frac{1}{\sqrt{7} - \sqrt{3}}$

(Remember that $y^{-1} = \frac{1}{y}$)

, prove that x and y are conjugate numbers, then find the value of : $x^2 y^2$

« 16 »

19  If $x = \sqrt{7} + \sqrt{5}$ and $y = \frac{2}{x}$, find the value of $\frac{x+y}{xy}$ in its simplest form. « $\sqrt{7}$ »

20  If $x = \frac{\sqrt{6} + \sqrt{5}}{\sqrt{6} - \sqrt{5}}$, prove that $x + \frac{1}{x} = 22$

21 Complete the following :

1 $(\sqrt{7} + \sqrt{3})(\sqrt{7} - \sqrt{3}) = \dots\dots\dots$

2  If $x = 3 + \sqrt{2}$, then its conjugate is ... and the product of multiplying x by its conjugate is

3 The conjugate number of the number $\frac{2}{\sqrt{5} - \sqrt{3}}$ is

4 The conjugate number of the number $1 + \frac{7}{\sqrt{7}}$ in the simplest form is

5  The multiplicative inverse for $(\sqrt{3} + \sqrt{2})$ in its simplest form is

6 If $x = 2 + \sqrt{5}$ and y is the conjugate number of x , then $(x - y)^2 = \dots\dots\dots$

7 If $\frac{x}{5 - \sqrt{5}} = 5 + \sqrt{5}$, then the value of x in its simplest form is

8  If $\frac{1}{x} = \sqrt{5} - 2$, then the value of x in its simplest form is

9 If $x = \sqrt{3} + 2$, $y = \sqrt{3} - 2$, then $(xy, x + y) = \dots\dots\dots$

10 $(\sqrt{2} + \sqrt{3})^{-9}(\sqrt{2} - \sqrt{3})^{-9} = \dots\dots\dots$

22 In each of the following, if a and b are two integers, find the value of each of them :

1 $\frac{11}{2\sqrt{5} + 3} = a\sqrt{5} + b$ « $2, -3$ »

2 $\frac{3}{2\sqrt{2} - \sqrt{5}} = a\sqrt{2} + b\sqrt{5}$ « $2, 1$ »

3 $\frac{7}{\sqrt{8} + 1} = a + b\sqrt{2}$ « $-1, 2$ »

23 Simplify each of the following :

1) $\frac{4}{\sqrt{5}+\sqrt{3}} + \frac{4}{\sqrt{5}-\sqrt{3}}$

« $4\sqrt{5}$ »

2) $\frac{\sqrt{6}-\sqrt{5}}{\sqrt{6}+\sqrt{5}} - \frac{\sqrt{6}+\sqrt{5}}{\sqrt{6}-\sqrt{5}}$

« $-4\sqrt{30}$ »

3) $\sqrt{75} - \sqrt[3]{125} + \frac{10}{\sqrt{3}-1}$

« $10\sqrt{3}$ »

For excellent pupils

24 If $x = \sqrt{4+\sqrt{7}}$, $y = \sqrt{4-\sqrt{7}}$

, find in the simplest form : $(x+y)^2$

« 14 »

25 If $x = \sqrt{5} + 1$ and $y = \sqrt{5} - 1$, find the value of : $xy^{-1} + yx^{-1}$

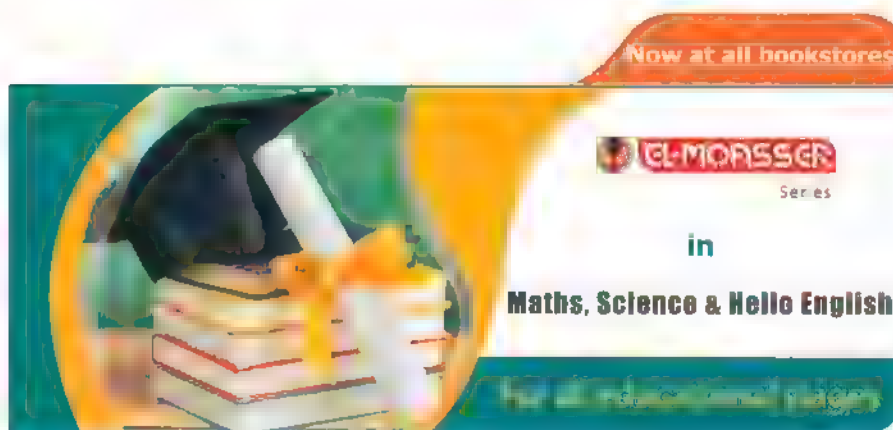

« 3 »

26 If $\frac{x}{y} = \sqrt{3} - \sqrt{2}$, find the value of $\frac{3x^2 + 3y^2}{xy}$

« $6\sqrt{3}$ »

27 If $x = \sqrt{7} + \sqrt{6}$ and $y = \sqrt{7} - \sqrt{6}$, find the value of : $\frac{x^8 y^9 - y}{(x+y)^5}$

Problem Solving

- 1** Put each of the following in the form $a\sqrt[3]{b}$ where a and b are two integers, b is the least possible positive value :

1 $\sqrt[3]{16}$

2 $\sqrt[3]{-54}$

3 $2\sqrt[3]{250}$

4 $\frac{2}{3}\sqrt[3]{-135}$

5 $3\sqrt[3]{\frac{1}{3}}$

6 $-10\sqrt[3]{\frac{2}{5}}$

- 2** Find the result of each of the following in its simplest form :

1 $\sqrt[3]{2} \times \sqrt[3]{32}$

2 $\frac{\sqrt[3]{72}}{\sqrt[3]{9}}$

3 $\frac{4\sqrt[3]{-54}}{2\sqrt[3]{-2}}$

4 $\frac{1}{2}\sqrt[3]{10} \times 6\sqrt[3]{100}$

5 $\sqrt[3]{\frac{2}{5}} \times \sqrt[3]{\frac{4}{25}}$

6 $\sqrt[3]{\frac{3}{4}} \div \sqrt[3]{\frac{2}{9}}$

- 3** Find the result of each of the following in its simplest form :

1 $\sqrt[3]{16} - \sqrt[3]{2}$

« $\sqrt[3]{2}$ »

2 $\sqrt[3]{125} - \sqrt[3]{24}$

« $5 - 2\sqrt[3]{3}$ »

3 $\sqrt[3]{81} + \sqrt[3]{-24}$

« $\sqrt[3]{3}$ »

4 $\sqrt[3]{54} + \sqrt[3]{16} - \sqrt[3]{250}$

« zero »

5 $2\sqrt[3]{54} - 5\sqrt[3]{2} + \sqrt[3]{16}$

« $3\sqrt[3]{2}$ »

6 $\sqrt[3]{16} - \frac{1}{3}\sqrt[3]{54} + \sqrt[3]{-2}$

« zero »

7 $\sqrt[3]{16} + \sqrt[3]{10} \times \sqrt[3]{25}$

« $7\sqrt[3]{2}$ »

8 $\sqrt[3]{24} - 6\sqrt[3]{13\frac{8}{9}}$

« $-8\sqrt[3]{3}$ »

4 Prove that :

1) $\sqrt[3]{128} + \sqrt[3]{16} - 2\sqrt[3]{54} = \text{zero}$

2) $\sqrt[3]{54} \times \sqrt[3]{16} \div (\sqrt[3]{4} \times 6) = 1$

5 Simplify each of the following to the simplest form :

1) $\sqrt[3]{81} + \sqrt[3]{-24} - 3\sqrt[3]{\frac{1}{9}}$ « zero »

2) $\sqrt[3]{54} + 8\sqrt[3]{-\frac{1}{4}} + 5\sqrt[3]{16}$ « $9\sqrt[3]{2}$ »

3) $\sqrt[3]{108} - 2\sqrt[3]{4} - 3\sqrt[3]{\frac{1}{2}}$ « $\frac{1}{2}\sqrt[3]{4}$ »

4) $\sqrt[3]{3} - \sqrt[3]{4} \times \sqrt[3]{6} + 3\sqrt[3]{\frac{1}{9}}$ « zero »

6 Simplify each of the following to its simplest form :

1) $\frac{7}{3}\sqrt{18} + \sqrt[3]{54} - 7\sqrt{2} + \sqrt[3]{16}$ « $5\sqrt[3]{2}$ »

2) $\sqrt{27} + \frac{1}{3}\sqrt[3]{27} - 9\sqrt{\frac{1}{3}} - 1$ « zero »

3) $\sqrt[3]{-16} + \frac{14}{\sqrt{7}} - \sqrt{28} + \sqrt[3]{54}$ « $\sqrt[3]{2}$ »

4) $\sqrt{18} + \sqrt[3]{54} - \frac{\sqrt{216}}{\sqrt{12}} - \sqrt[3]{16}$ « $\sqrt[3]{2}$ »

5) $5\sqrt{2} - \frac{1}{2}\sqrt{200} + (\sqrt[3]{5} \times \sqrt[3]{25})$ « 5 »

7 Simplify the following to its simplest form :

$2\sqrt[3]{16} (3\sqrt[3]{4} + 5\sqrt[3]{32} - 2\sqrt[3]{\frac{1}{2}})$ « 96 »

8 Choose the correct answer from those given :

1) $\sqrt[3]{54} + \sqrt[3]{-2} = \dots\dots\dots$

(a) $\sqrt[3]{52}$

(b) $\sqrt[3]{2}$

(c) $2\sqrt[3]{2}$

(d) $4\sqrt[3]{2}$

2) $\sqrt[3]{-64} + \sqrt[3]{16} = \dots\dots\dots$

(a) zero

(b) 8

(c) - 8

(d) ± 8

3) $\frac{\sqrt[3]{16}}{\sqrt[3]{2}} = \dots\dots\dots$

(a) 8

(b) - 2

(c) 2

(d) $2\sqrt[3]{2}$

4 $\sqrt[3]{2} + \sqrt[3]{2} = \dots$

(a) $\sqrt[3]{2}$

(b) $\sqrt[3]{4}$

(c) $\sqrt[3]{8}$

(d) $\sqrt[3]{16}$

5 $\sqrt[3]{\frac{2}{9}} = \dots\dots\dots$

(a) $\frac{\sqrt[3]{6}}{3}$

(b) $\sqrt[3]{\frac{1}{6}}$

(c) $\sqrt[3]{6}$

(d) $\sqrt[3]{2}$

9 Complete the following :

1 $\sqrt[3]{\frac{2}{3}} \times \sqrt[3]{-12} = \dots\dots\dots$

2 $\sqrt[3]{3} \times \sqrt[3]{9} = \sqrt{\dots\dots\dots}$

3 $\sqrt[3]{54} - \sqrt[3]{-16} = \sqrt[3]{\dots\dots\dots}$

4 $\frac{1}{2} \sqrt[3]{56} - \sqrt[3]{\frac{7}{27}} = \dots\dots\dots$

5 If $x = 2$, $y = \sqrt[3]{-16}$, then $\left(\frac{x}{y}\right)^3 = \dots\dots\dots$

6 $\frac{\sqrt[3]{250} - \sqrt[3]{16}}{\sqrt[3]{54}} = \dots\dots\dots$

10 If $a = \sqrt[3]{5} + 1$, $b = \sqrt[3]{5} - 1$, find the value of each of the following :

1 $(a - b)^5$

2 $(a + b)^3$

« 32, 40 »

11 If $x = 3 + \sqrt[3]{6}$, $y = 3 - \sqrt[3]{6}$, find the value of : $\left(\frac{x-y}{x+y}\right)^3$ « $\frac{7}{9}$ »

12 Find the result of the following in its simplest form :

$$\sqrt[3]{32} + 4\sqrt[3]{\frac{1}{2}} - (2\sqrt[3]{-2})^2 + (\sqrt{2})^{\text{zero}} - \left(\frac{2}{\sqrt{2}}\right)^2$$

« -1 »

Life Application13 The opposite figure represents a number of cubic boxes ,
the volume of each one is 24 dm^3

Find the area of the ground for putting the boxes.

« $20\sqrt[3]{9} \text{ dm}^2$ »**For excellent pupils**14 If $x = \sqrt[3]{2} + 1$, $y = \sqrt[3]{2} - 1$, prove that : $x^2 + y^2 = 2\sqrt[3]{4} + 2$ 15 Make the denominator of $\frac{2}{\sqrt[3]{2}}$ a rational number.

The cube

1 Complete the following :

- 1 If the edge length of a cube is 5 cm. , then its volume = cm^3
- 2 The edge length of a cube is 4 cm. , then its total area = cm^2
- 3 The lateral area of a cube whose edge length is l cm. is cm^2
- 4 The cube whose volume is $l^3 \text{ cm}^3$, its total area = cm^2
- 5 The cube whose edge length is $2l$ cm. , then its volume = cm^3

2 A cube whose lateral area is 36 cm^2 Find :

- 1 Its total area.
- 2 Its volume. « 54 cm^3 , 27 cm^3 »

3 The perimeter of one face of a cube is 12 cm. Find :

- 1 Its volume.
- 2 Its lateral area. « 27 cm^3 , 36 cm^2 »

4 The sum of lengths of all edges of a cube is 60 cm. Find :

- 1 Its volume.
- 2 Its total area. « 125 cm^3 , 150 cm^2 »

5 Choose the correct answer from those given :

- 1 The volume of a cube is 1 cm^3 , then the sum of its edge lengths = cm.
(a) 1 (b) 6 (c) 8 (d) 12

- 2  The volume of a cube is 64 cm^3 , then its lateral area = cm^2
 (a) 4 (b) 8 (c) 64 (d) 96
- 3 A cube of volume 27 cm^3 , then its total area = cm^2
 (a) 9 (b) 27 (c) 36 (d) 54
- 4 If the total area of a cube is 96 cm^2 , then the area of one face = cm^2
 (a) 16 (b) 64 (c) 24 (d) 48
- 5 A cube of total area 150 cm^2 , then its lateral area = cm^2
 (a) 25 (b) 100 (c) 125 (d) 150
- 6 If the area of the six faces of a cube = 54 cm^2 , then its volume = cm^3
 (a) 54 (b) 44 (c) 72 (d) 27
- 7 If the volume of a cube = 64 cm^3 , then the length of a diagonal of one face = cm.
 (a) 16 (b) $4\sqrt{2}$ (c) 32 (d) 64
- 8 The volume of a cube is 5 cm^3 . If the edge length became twice the first, then its volume = cm^3
 (a) 10 (b) 20 (c) 30 (d) 40
- 9  The edge length of a cube whose volume is $2\sqrt{2} \text{ cm}^3$ is cm.
 (a) $\sqrt{2}$ (b) 2 (c) 8 (d) 1.5

The cuboid

- 6 The dimensions of the base of a cuboid are 9 cm. and 10 cm. and its height is 5 cm. Find :
 1 Its volume. 2 Its lateral area. 3 Its total area.
« 450 cm^3 , 190 cm^2 , 370 cm^2 »
-
- 7 The dimensions of a cuboid are $\sqrt{2} \text{ cm}$, $\sqrt{3} \text{ cm}$, and $\sqrt{6} \text{ cm}$. Find its volume. « 6 cm^3 »
-
- 8 The dimensions of the base of a cuboid are $\sqrt{3} \text{ cm}$, and $(\sqrt{3} - 1) \text{ cm}$, and its height equals $(3 + \sqrt{3}) \text{ cm}$. Calculate its volume. « 6 cm^3 »
-
- 9 The lateral area of a cuboid is 480 cm^2 and its base is in the shape of a square whose side length is 10 cm. Calculate its height. « 12 cm »
-
- 10  Find the total area of a cuboid whose volume is 720 cm^3 and its height is 5 cm. with a squared-shape base. « 528 cm^2 »

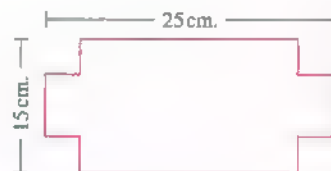

11 Which is more in size :

A cube whose total area is 294 cm^2 or a cuboid with dimensions $7\sqrt{2} \text{ cm}$, $5\sqrt{2} \text{ cm}$, and 5 cm ?

12 In the opposite figure :

A rectangular piece of cardboard has a length of 25 cm , and a width of 15 cm . A square whose side length = 4 cm , was cut from each of its four corners, then the projected parts were folded to form a basin in the shape of a cuboid.

Find the volume and the total area of that cuboid.

« 476 cm^3 , 311 cm^2 »

The circle Consider $\pi = \frac{22}{7}$ if there are not any other values given.

13 A circle is of radius length 10.5 cm . Find each of its circumference and its area.

« 66 cm , 346.5 cm^2 »

14 The area of a circle is 154 cm^2 . Find its circumference and its diameter length.

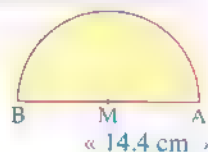

« 44 cm , 14 cm »

15 A circle whose area is $64\pi \text{ cm}^2$. Find the length of its radius, then find its circumference approximating it to the nearest integer. ($\pi = 3.14$)

« 8 cm , 50 cm »

16 In the opposite figure :

AB is a diameter of the semicircle. If the area of this region is 12.32 cm^2 , find the perimeter of the figure.

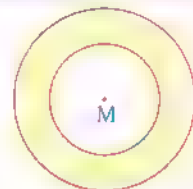

« 14.4 cm »

17 In the opposite figure :

These are two concentric circles at M and their radii lengths are 3 cm and 5 cm .

Find the area of the shaded part in terms of π

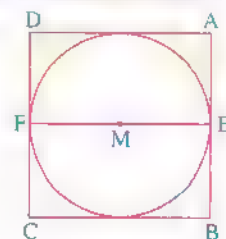

« $16\pi \text{ cm}^2$ »

18 In the opposite figure :

The circle M is inside the square ABCD

If the area of the shaded part = $10\frac{5}{7} \text{ cm}^2$,

find the perimeter of this part.

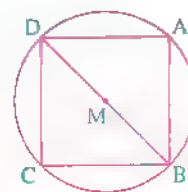

« $35\frac{5}{7} \text{ cm}$ »

19 In the opposite figure :

The square ABCD is inside the circle M

If the radius length of the circle M is 7 cm. ,

find the area of the shaded part and its perimeter.

« 14 cm^2 , $(11 + 7\sqrt{2}) \text{ cm}$. »

The right circular cylinder

Consider $\pi = \frac{22}{7}$ if there are not any other values given.

20 A right circular cylinder , the radius length of its base is 14 cm. and its height is 20 cm.

Find the volume and the total area of the cylinder.

« 12320 cm^3 , 2992 cm^2 . »

21 Find the lateral area for a right circular cylinder of volume 924 cm^3 and of a height 6 cm.

« 264 cm^2 . »

22 Find the total area of a right circular cylinder of volume 7536 cm^3 and its height is 24 cm.

($\pi = 3.14$)

« 2135.2 cm^2 . »

23 Which is more in volume :

A right circular cylinder with base radius length 7 cm. and its height = 10 cm.
or a cube whose edge length is equal to 11 cm. ?

24 Complete the following :

1 A right circular cylinder whose base radius length is r cm. and its height = h cm.
 , then its lateral area = cm^2 and its volume = cm^3

2 A right circular cylinder with volume $40\pi \text{ cm}^3$ and its height = 10 cm. , then its base radius length =

3 A right circular cylinder with volume $500\pi \text{ cm}^3$ and its base radius length = 5 cm. ,
 then its height = ...

4 A right circular cylinder with volume $\pi r^3 \text{ cm}^3$, then its height =

5 If the lateral area of a right circular cylinder is $2\pi r^2 \text{ cm}^2$, then its height =

25 The circumference of the base of a right circular cylinder is 44 cm. and its height = 25 cm.

Find its volume.

« 3850 cm^3 . »

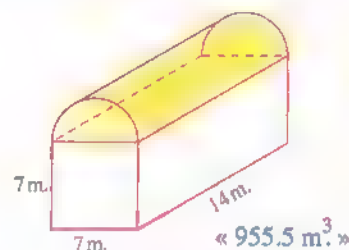

- 26 The lateral area of a right circular cylinder is 52 cm^2 and the length of the diameter of its base is 8 cm. Find its volume. « 104 cm^3 »

- 27 A right circular cylinder of volume $36 \pi \text{ cm}^3$ and height 4 cm, the radius length of its base equals the edge length of a cube.
Find : The total area of the cube. « 54 cm^2 »

- 28 Find the height of a right circular cylinder whose height is equal to its base radius length and its volume is $72 \pi \text{ cm}^3$. « $2\sqrt[3]{9} \text{ cm}$ »

- 29 In the opposite figure :

A cuboid-shaped water tank with dimensions 7 m, 7 m, and 14 m, and the upper part of it is in the form of half of a right circular cylinder. Calculate the volume of the tank in m^3 .

- 30 A piece of paper has a shape of a rectangle ABCD in which $AB = 10 \text{ cm}$, and $BC = 44 \text{ cm}$. It was folded to form a right circular cylinder such that \overline{AB} is coincident to \overline{DC} . Find the volume of the resulted cylinder. « 1540 cm^3 »

The sphere

Consider $\pi = \frac{22}{7}$ if there are not any other values given.

- 31 Find the volume and the surface area of a sphere if the length of its diameter is 4.2 cm. « 38.808 cm^3 , 55.44 cm^2 »

- 32 The volume of a sphere is 4188 cm^3 . Find its radius length. ($\pi = 3.141$) « 10 cm »

- 33 The volume of a sphere is $562.5 \pi \text{ cm}^3$. Find its surface area in terms of π . « $225 \pi \text{ cm}^2$ »

- 34 Choose the correct answer from those given :

1 The volume of the sphere =

- (a) $4 \pi r^2$ (b) $\frac{4}{3} \pi r^3$ (c) $\frac{3}{4} \pi r^3$ (d) $\frac{4}{3} \pi r^2$

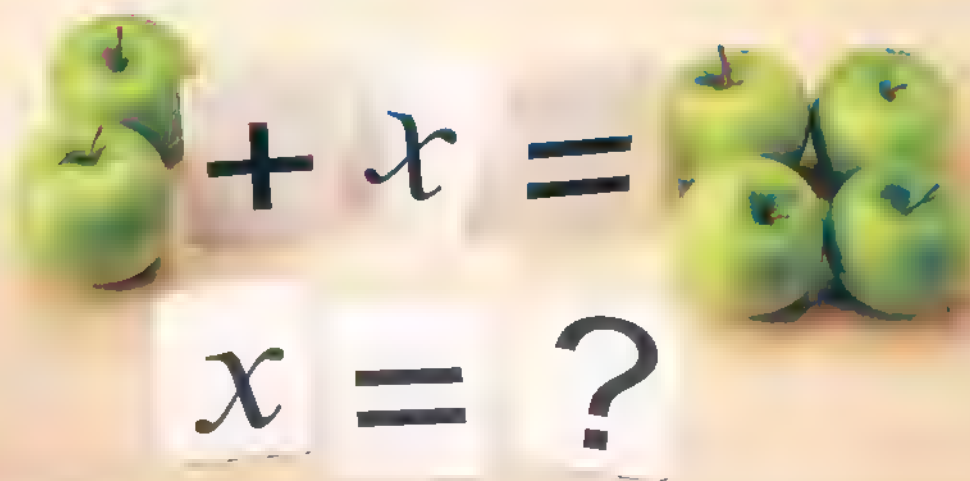

2 The sphere whose radius length is $\sqrt[3]{3} \text{ cm}$, its volume = cm^3

- (a) 4π (b) $4\sqrt{3} \pi$ (c) $\frac{4}{3} \pi$ (d) $\frac{9}{4} \pi$

3 The volume of the sphere whose diameter length is 6 cm, equals cm^3

- (a) 288 (b) 12π (c) 36π (d) 288π

- 4 If the volume of a sphere = $\frac{9}{16} \pi \text{ cm}^3$, then its radius length = cm.
 (a) 3 (b) $\frac{4}{3}$ (c) $\frac{3}{4}$ (d) $\frac{1}{3}$
- 5 If the surface area of a sphere is $9 \pi \text{ cm}^2$, then its diameter length = cm.
 (a) 9 (b) 3 (c) 1.5 (d) 6
- 6 If three quarters of the volume of a sphere equals $8 \pi \text{ cm}^3$, then the length of its radius equals cm.
 (a) 64 (b) 8 (c) 4 (d) 2
- 7 If the radius length of a sphere is $r \text{ cm}$, then which of the following represents the ratio between the area of the sphere and its volume?
 (a) $\frac{4}{r}$ (b) $\frac{3}{r}$ (c) $\frac{r}{4}$ (d) $\frac{r}{\pi}$
- 35 Find the radius length of a sphere if its volume equals the volume of a right circular cylinder whose height is 18 cm. and its base radius length is 4 cm. « 6 cm. »
- 36 Find the volume of a sphere if its radius length equals the radius length of a right circular cylinder with volume 7536 cm^3 and height 24 cm. ($\pi = 3.14$) « $4186\frac{2}{3} \text{ cm}^3$ »
- 37  A lead cuboid is of dimensions 77 cm. , 24 cm. and 21 cm. It was melted to make a sphere. Find the radius length of that sphere. « 21 cm. »
- 38  A metallic sphere , with diameter length 6 cm. has got melt and changed into a right circular cylinder with base radius length 3 cm. Find its height. « 4 cm. »
- 39  A sphere with volume $36 \pi \text{ cm}^3$ is placed inside a cube. If the sphere touches the six faces of the cube , find :
 1 The radius length of the sphere.
 2 The volume of the cube. « 3 cm. , 216 cm^3 »
- 40 A metallic sphere is of radius length 16.8 cm. It is melted and it is converted to 8 small spheres which are equal in volume. Find the radius length of each small sphere. « 8.4 cm. »
- 41  A right circular cylinder has a height of 20 cm. Find its base radius length if its volume equals $\frac{4}{9}$ of the volume of a sphere with a diameter length of 30 cm. « 10 cm. »
-  **For excellent pupils**
- 42 A cuboid has a square-shaped base whose height = 3 cm. If the sum of lengths of its edges is 52 cm. , find its volume. « 75 cm^3 »
- 43  A hollow metal sphere is with internal radius length 2.1 cm. and external radius length 3.5 cm. Find its mass approximated to the nearest gram taking into consideration that the mass of a cubic centimetre of such a metal is 20 gm. « 2817 gm. »

Remember Understand Apply Problem Solving

- 1 Find the solution set for each of the following equations in \mathbb{R} , then represent the solution on the number line :

1 $x + 5 = 0$

2 $5x + 6 = 1$

3 $2x + 4 = 3$

4 $2x - 3 = 4$

5 $4x - 1 = |-2|$

6 $\sqrt{5}x - 1 = 4$

7 $x - 1 = \sqrt{3}$

8 $2 - \sqrt{6}x = |-8|$

9 $x + 2\sqrt{3} = 3$

- 2 Choose the correct answer from those given :

- 1 The figure represents the solution set of the inequality in \mathbb{R}

(a) $x > -3$ (b) $x \geq -3$ (c) $x < -3$ (d) $x \leq -3$

- 2 The figure represents the solution set of the inequality in \mathbb{R}

(a) $-6 < x < 6$ (b) $-6 \leq x < 6$ (c) $-6 < x \leq 6$ (d) $-6 \leq x \leq 6$

- 3 If $x \in]3, \infty[$, then

(a) $x < 3$ (b) $x \leq 3$ (c) $x > 3$ (d) $x \geq 3$

- 4 The S.S. of the inequality : $x > 7$ in \mathbb{R} is

(a) $] -7, \infty[$ (b) $[7, \infty[$ (c) $] -\infty, 7[$ (d) $]7, \infty[$

5 The S.S. of the inequality : $-1 < x \leq 5$ in \mathbb{R} is

- (a) $]-1, 5]$ (b) $[-1, 5]$ (c) $\{-1, 5\}$ (d) $[-1, 5[$

6 The S.S. of the inequality : $-x > 3$ in \mathbb{R} is

- (a) $\{-3\}$ (b) $]3, \infty[$ (c) $]-\infty, 3[$ (d) $]-\infty, -3[$

3 Find the solution set for each of the following inequalities in \mathbb{R} in the form of an interval, then represent the solution on the number line :

1 $2x > 6$

2 $-7x \geq -14$

3 $x + 3 \leq 5$

4 $5 - x > 3$

5 $2x + 5 \geq 3$

6 $1 - 5x < 6$

7 $\frac{1}{2}x + 1 \leq 2$

8 $3 - 2x \leq 7$

4 Find the solution set for each of the following inequalities in \mathbb{R} in the form of an interval, then represent the solution on the number line :

1 $3 < x + 2 \leq 6$

2 $-5 < x + 3 < 9$

3 $-3 \leq -x < 3$

4 $1 < 5 - x \leq 3$

5 $\sqrt[3]{-8} \leq x + 1 \leq \sqrt{9}$

6 $5 < 3 - x \leq 3^2$

7 $-8 \leq 3x + 1 \leq 4$

8 $|-3| < 2x - 1 < 5$

9 $-3 < \frac{1}{2}x - 2 \leq \text{zero}$

10 $0 \leq \frac{-2x+6}{3} < 4$

5 Find the solution set for each of the following inequalities in \mathbb{R} in the form of an interval, then represent the solution on the number line :

1 $3x < 2x + 4$

2 $7x - 9 \geq 4x$

3 $5x - 3 < 2x + 9$

4 $7x - 12 \geq 5x - 8$

5 $x - 1 \leq 3 - x$

6 $1 - x \geq -2x - 3$

6 Find the solution set for each of the following inequalities in \mathbb{R} in the form of an interval, then represent the solution on the number line :

1 $x + 3 \geq 2x \geq x - 2$

2 $-x < x < 4 - x$

3 $4x \leq 5x + 2 < 4x + 3$

4 $x - 1 < 3x - 1 \leq x + 1$

5 $2 + 2x \leq 3x + 3 < 5 + 2x$

6 $\frac{3x-4}{6} < x + 1 < \frac{x+3}{2}$

7 Complete the following :

1 If $x - 3 \geq 0$, then x

2 If $5x < 15$, then x

3 If $1 - x > 4$, then x

4 If $-2x \leq 3$, then x

- 5 If $\sqrt{2}x \leq 4$, then x
- 6 The S.S. of the inequality : $4 < 2x < 8$ in \mathbb{R} is
- 7 The S.S. of the inequality : $-5 \leq -x < 2$ in \mathbb{R} is
- 8 The S.S. of the inequality : $2 - x < 0$ in \mathbb{R} is
- 9 If $-3 < x < 3$ where $x \in \mathbb{R}$, then $2x \in]-6, \dots [$

8 Choose the correct answer from those given :

- 1 The S.S. of the inequality : $x + 3 < 3$ in \mathbb{R} is
 (a) $]-\infty, 0[$ (b) $]-\infty, 0]$ (c) $[0, \infty[$ (d) $[0, \infty[$
- 2 The S.S. of the inequality : $1 > x - 5 > -1$ in \mathbb{R} is
 (a) $[4, 6]$ (b) $]4, 6[$ (c) $]4, 6]$ (d) $[4, 6[$
- 3 If $x > 5$, then $-x$
 (a) < -9 (b) ≥ -5 (c) < -5 (d) > -5
- 4 If $-2 < x < 2$, then $2x + 3$ belongs to
 (a) $[-1, 7]$ (b) $]-1, 5[$ (c) $]-1, 7[$ (d) $]-4, 6[$
- 5 The number 5 belongs to the S.S. of the inequality
 (a) $x > 5$ (b) $x < 5$ (c) $-x \geq -5$ (d) $-x \geq 5$

Life Application

- 9 A lift for carrying goods can carry 2200 kg. as a maximum weight. If we have 60 boxes of cans and the weight of one box is 45 kg., what is the maximum number of boxes can the lift carry in one time without carrying any person ?
 « 48 boxes »

For excellent pupils

- 10 Prove that $\sqrt{3}$ belongs to the S.S. of the inequality : $0 < 4 - 2x < 6$ in \mathbb{R}
- 11 If $[4, 7]$ is the S.S. of the inequality : $a \leq x - 3 \leq b$, find the value of each of a and b « 1, 4 »
- 12 If $[m, m + n]$ is the S.S. of the inequality : $\frac{1}{5} \leq \frac{2x+1}{5} \leq 1$, find the value of n « 2 »
- 13 If $5 \leq \frac{2x}{3} + 1 \leq 7$, find the smallest value of the expression : $x - 2$ « 4 »
- 14 Find in \mathbb{R} the S.S. of the inequality : $\frac{x}{\sqrt{3} - \sqrt{5}} \geq \sqrt{3} + \sqrt{5}$

A Research Project

On Unit One

Project aims :

- Performing arithmetic operations on real numbers.
- Finding volumes as applications on operations on real numbers.
- Associating mathematics with science.

Do a research project on the following topic :

'The planet Earth where we live on is one of the solar system planets, which consists of eight planets rotating around the sun'.

Discuss the following points using available resources :

- 1 State the names of the solar system planets.
- 2 Find the radius length of each planet in the solar system and calculate its volume.
- 3 Arrange the solar system planets in a descending order according to their volumes.
- 4 Find out the weight of a body on the surface of the Earth in the simplest form if its weight on the surface of the moon is $30\sqrt{18}$ kg.

Relation between Two Variables

Exercises of the unit :

- 11.** Relation between two variables.
- 12.** Slope of straight line.
- 13.** Real life applications on the slope.

 **A research project on unit two**

● Remember ● Understand ● Apply ● Problem Solving

- 1 Complete the following ordered pairs which satisfy the relation : $y = 3x - 1$
 (5,), (2,), (0,), (-3,)

- 2 Show which of the following ordered pairs satisfies the relation : $y - 4x = 7$
 1 (1, 2) 2 (3, -5) 3 (-1, 3)

- 3 Find four ordered pairs satisfying each of the following relations :

1 $2x - y = 5$

2 $y = \frac{1}{2}x + 5$

3 $y = 2$

4 $2x = 5$

- 4 Using the linear relations, complete the following tables :

1 $4x - y = -1$

x	0	1	2	3
y

2 $y = 5x + 15$

x	-4	-3	-2
y

3 $a - b = 4$

a	1
b	0	-1

4 $a - 3b = 5$

a	2	-1
b	0	..

5 If $y - 2x = 1$, find :

1 y at $x = 3$

3 x at $y = 1$

2 y at $x = -5$

4 x at $y = -1$

6 If $(3, 6)$ satisfies the relation : $y = kx$, find the value of k

« 2 »

7 If $(3, 1)$ satisfies the relation : $y - 3x = a$, find the value of a

« -8 »

8 Find the value of b , where $(-3, 2)$ satisfies the relation : $3x + by = 1$

« 5 »

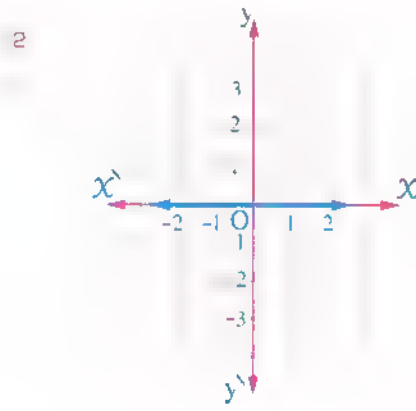

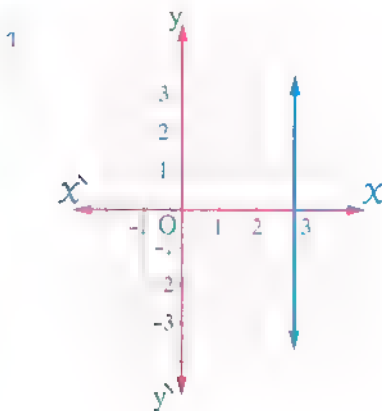

9 If $(3, a)$ satisfies the relation : $y - 2x = 4$, find the value of a

« 10 »

10 Find the value of k , where $(k, 2k)$ satisfies the relation : $x + y = 15$

« 5 »

11 Find the relation that is represented by the line in each figure below :

12 Represent graphically each of the following relations :

1 $x + y = 2$

3 $x + 2y = 3$

5 $y = -2x$

7 $2x = 5$

2 $x - y = 3$

4 $y - 3x = 1$

6 $y - 2x = -1$

8 $y + 1 = 0$

13 Graph the relation : $2x + 3y = 6$, if the straight line representing this relation intersects the x -axis at the point A and the y -axis at the point B, find the area of the triangle OAB where O is the origin point.

« 3 square units »

- 14 If the straight line which represents the relation : $2x - y = a$ intersects the x -axis at the point $(3, b)$, find a and b

« 6, 0 »

- 15 Choose the correct answer from those given :

- 1 Which of the following ordered pairs satisfies the relation : $2x + y = 5$?
 (a) $(-1, 3)$ (b) $(1, 3)$ (c) $(3, 1)$ (d) $(2, 2)$
- 2 $(3, 2)$ does not satisfy the relation
 (a) $y + x = 5$ (b) $3y - x = 3$ (c) $y + x = 7$ (d) $x - y = 1$
- 3 The relation : $5x = 7y$ is represented by a straight line passes through the point
 (a) $(5, 7)$ (b) $(0, 0)$ (c) $(5, 0)$ (d) $(0, 7)$
- 4 The point $(3, 5)$ lies on the straight line which represents the relation
 (a) $y = 3x - 5$ (b) $2x - y = 1$ (c) $3x + y = 1$ (d) $y = 3x - 1$
- 5 If $(2, -5)$ satisfies the relation : $3x - y + c = 0$, then $c =$
 (a) 1 (b) -1 (c) 11 (d) -11
- 6 If $(-1, 5)$ satisfies the relation : $3x + ky = 7$, then $k =$
 (a) 2 (b) -2 (c) 1 (d) 10
- 7 Which of the following relations is represented by a straight line parallel to the y -axis ?
 (a) $y = -5$ (b) $x = -5$ (c) $x = y$ (d) $x + y = 0$
- 8 Which of the following relations is represented by a straight line parallel to the x -axis ?
 (a) $2y = 6$ (b) $2x = 6$ (c) $x = -y$ (d) $x - y = 0$
- 9 Which of the following relations is represented by a straight line passes through the origin point ?
 (a) $y = 5$ (b) $x = -3$ (c) $y = x + 2$ (d) $y = 3x$
- 10 The relation : $3x + 8y = 24$ is represented by a straight line intersecting the y -axis at the point
 (a) $(0, 8)$ (b) $(8, 0)$ (c) $(0, 3)$ (d) $(3, 0)$
- 11 The relation : $2x + 7y = 14$ is represented by a straight line intersecting the x -axis at the point
 (a) $(2, 0)$ (b) $(0, 2)$ (c) $(7, 0)$ (d) $(0, 7)$

- 12 The opposite table represents the relation between x and y , which of the following expresses this relation?

x	1	2	3	4
y	-2	-5	-8	-11

- (a) $x + y = -1$ (b) $x - y = 3$ (c) $3x + y = 1$ (d) $y = -x - 3$

- 13 The opposite table shows the relation between x and y , which is

x	1	2	3	4	5
y	1	3	5	7	9

- (a) $y = x + 4$ (b) $y = x + 1$
(c) $y = 2x - 1$ (d) $y = 3x - 2$

- 14 The relation which expresses the two ordered pairs (2, 1) and (4, 3) together is

- (a) $y = \frac{1}{2}x$ (b) $y = 2x - 5$ (c) $y = x - 1$ (d) $y = 3x + 3$

- 16 Two even natural numbers, twice the first plus the second equals 12

Find the different possibilities of the two numbers.

Geometric Application

- 17 The perimeter of a rectangle is 14 cm. What are the different possibilities of the length and the width given that each of them belongs to \mathbb{Z}_+ ?

Life Applications

- 18 Essam has 10 bills of L.E. 5 and other bills of L.E. 20. He bought some goods from a shopping centre for L.E. 65. Determine the different possibilities to pay this amount of money. Find the relation and graph it.

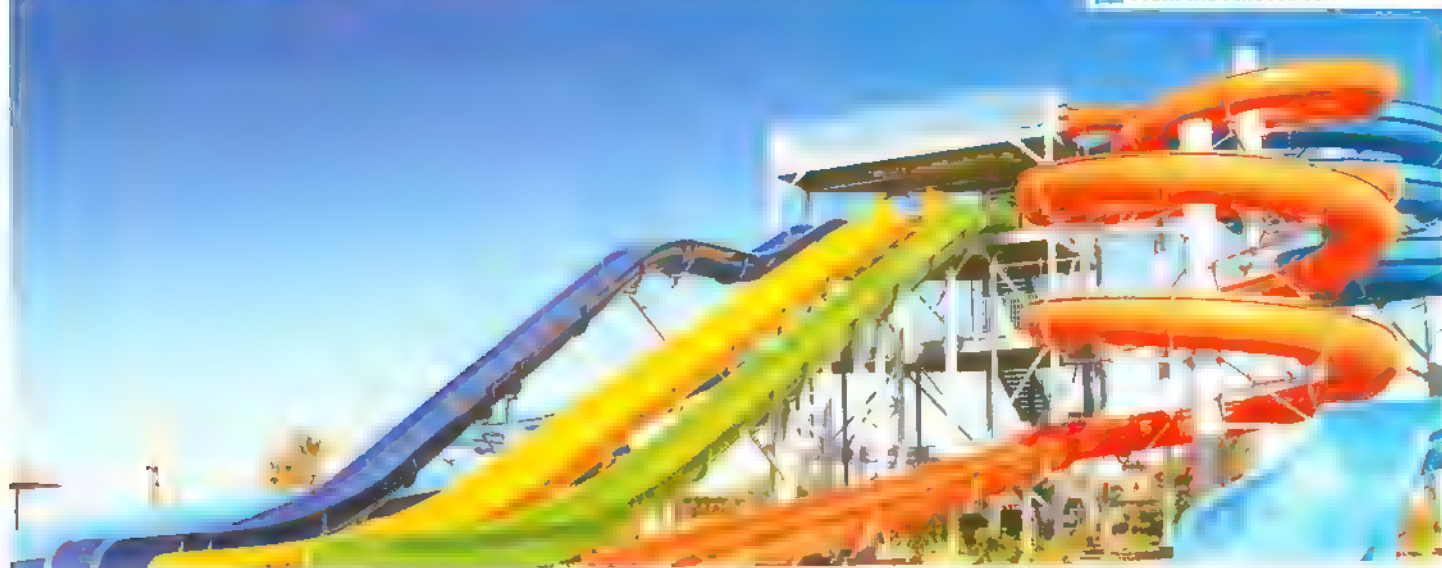

- 19 The selling price of a computer table is L.E. 100 and its chair is L.E. 50. If the store sells in one week with L.E. 500, what are the represented expectations to the number of sold computer tables and chairs? Represent the relation graphically.

For excellent pupils

- 20 The perimeter of an isosceles triangle is 19 cm. What are the different possible lengths of its sides given that its sides lengths $\in \mathbb{Z}_+$?

Notice that: The sum of the lengths of any two sides of the triangle is greater than the length of the third side.

● Remember ● Understand ☺ Apply ● Problem Solving

- 1 Classify the slope of the straight line in each of the following figures showing whether it is (positive – negative – zero – undefined) :

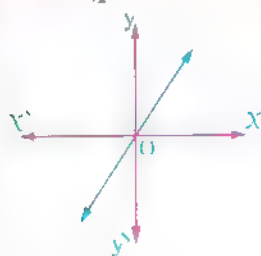

Fig. (1)

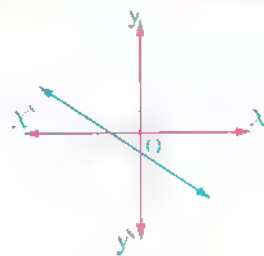

Fig. (2)

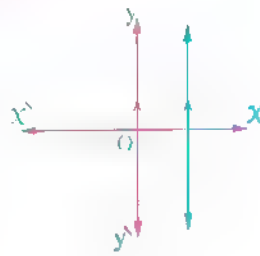

Fig. (3)

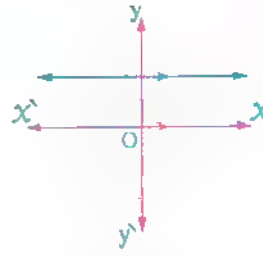

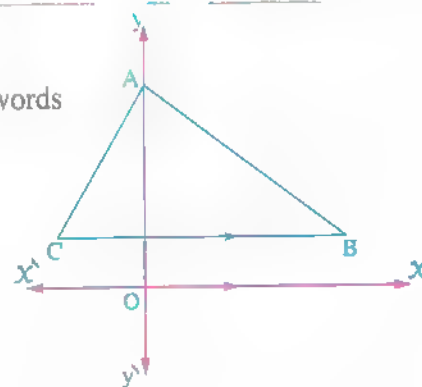

Fig. (4)

- 2 In the opposite figure :

ABC is a triangle. Complete by using one of the following words (positive , negative , zero , undefined)

- 1 The slope of \overline{AB} is
- 2 The slope of \overline{BC} is
- 3 The slope of \overline{AO} is
- 4 The slope of \overline{AC} is

- 3 Complete the following :

- 1 The slope of any horizontal straight line equals ..
- 2 The slope of any straight line parallel to y-axis is ..
- 3 The straight line whose slope = zero is parallel to ..
- 4 If A , B and C are collinear , then the slope of \overline{AB} = the slope of ..

4 Find the slope of the straight line passing through the two points in each of the following :

1 $A(1, 3)$, $B(3, 4)$

3 $A(3, 2)$, $B(6, 5)$

5 $A(1, 3)$, $B(2, 3)$

7 $A(3, -1)$, $B(3, 2)$

9 $A(-1, 3)$, $B(2, 1)$

11 $E(-3, -1)$, $O(0, 0)$

2 $A(1, 2)$, $B(5, 0)$

4 $A(2, -1)$, $B(4, -1)$

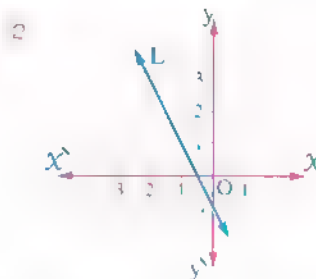

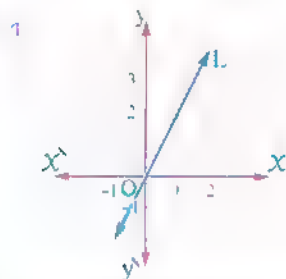

6 $A(5, 2)$, $B(5, 4)$

8 $A(3, -2)$, $B(4, 1)$

10 $N(4, -2)$, $K(-1, -7)$

12 $A(-6, -9)$, $B(-1, -1)$

5 Find the slope of the straight line L in each of the following graphs :

6 In the opposite figure :

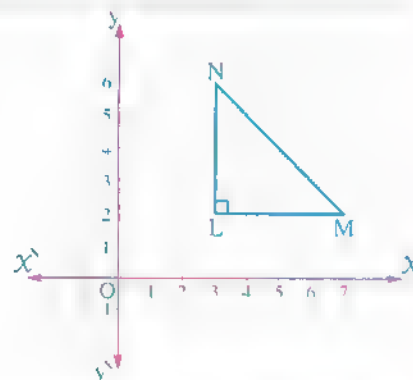

LMN is a right-angled triangle at L

, where $m(\angle M) = 45^\circ$

Given that $L(3, 2)$ and $M(7, 2)$

, find the coordinates of N

and calculate the slope of \overrightarrow{MN}

7 If $A(2, -1)$, $B(10, 3)$ and $C(2, 3)$, find the slope of each of \overrightarrow{AB} , \overrightarrow{BC} and \overrightarrow{CA}

Draw the triangle ABC on a square grid , then mention the type of the triangle according to the measures of its angles.

8 If the slope of the straight line which passes through the two points $(1, 3)$ and $(3, k)$ equals 3 , find the value of k

« 9 »

9 If the slope of the straight line which passes through the two points $(3, c)$ and $(5, -2)$ equals -3 , find the value of c

« 4 »

10 If $A(-1, 4)$, $B(X, 2)$ and the slope of \overrightarrow{AB} equals -2

, find the value of X

« zero »

- 11 If the straight line which passes through the two points $(-2, y)$ and $(3, -1)$ has a slope -0.6 , find the value of y « 2 »
- 12 Find the value of k such that the straight line passing through the two points $(3, 4)$ and $(2, k)$ is parallel to X -axis. « 4 »
- 13 Find the value of X such that the straight line which passes through the two points $(2X, 3)$ and $(6, 7)$ is parallel to y -axis. « 3 »
- 14 Find the value of y such that the straight line passing through the two points $(3, 6)$ and $(-2, 3y)$ is perpendicular to y -axis. « 2 »
- 15 Are the points $(-5, 11)$, $(0, 8)$ and $(5, 5)$ collinear ?
- 16 Find the slope of each of \overline{AB} , \overline{BC} and \overline{AC} , where $A(2, 1)$, $B(3, 2)$ and $C(4, 5)$ and represent each line graphically. What do you observe ?
- 17 In each of the following, prove that the points A , B and C are collinear :
- 1 $A(1, 1)$, $B(2, 2)$, $C(-3, -3)$
 - 2 $A(4, -3)$, $B(-6, 7)$, $C(5, -4)$
 - 3 $A(-2, 12)$, $B(2, 4)$, $C(6, -4)$
- 18 In each of the following, prove that the points A , B and C are not collinear :
- 1 $A(2, 1)$, $B(3, 0)$, $C(5, -1)$
 - 2 $A(-1, 2)$, $B(3, 1)$, $C(7, 2)$
 - 3 $A(0, -3)$, $B(2, 2)$, $C(-3, -3)$
- 19 Find the slope of the line \overline{AB} , where $A(-1, 3)$ and $B(2, 5)$
Is the point $C(8, 1) \in \overline{AB}$? « $\frac{2}{3}$ »
- 20 Find the value of y such that the points $(4, 1)$, $(-2, 7)$ and $(3, y)$ are collinear. « 2 »

For excellent pupils

- 21 If the straight line which passes through the points $(3, -1)$, $(X, 1)$ and $(9, y)$ has a slope $= \frac{2}{3}$, find the value of each of X and y « 6, 3 »

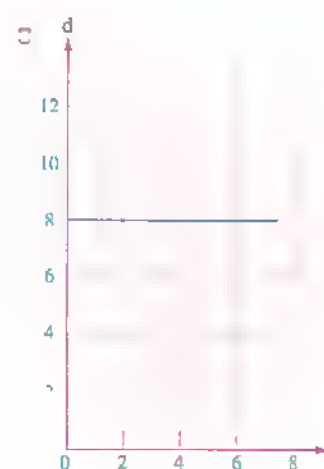

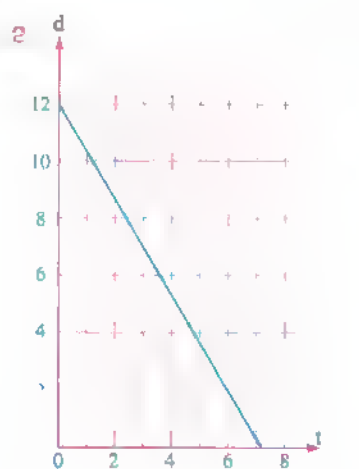

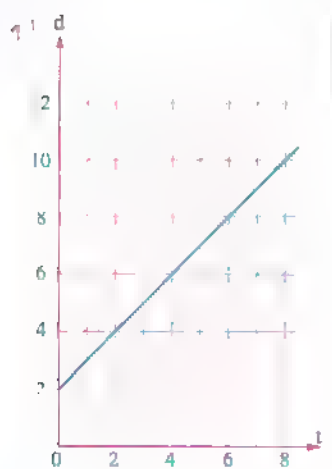

Remember

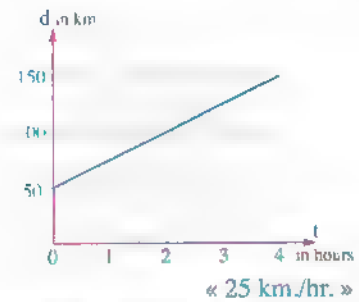

Problem Solving

- 1 A car moves with uniform velocity such that it covers 180 km. per 3 hours. If the car moves for 5 hours , what is the covered distance ? « 300 km. »
- 2 An irrigation machine consumes 2.47 litres of diesel to work for 3 hours. If the machine works for 10 hours , how many litres of diesel will the machine consume ? « $8\frac{7}{30}$ litres »
- 3 The following diagrams show the relation between the covered distance (in m.) and the elapsed time (in sec.) of an object. Determine the position of the object at the starting of motion and its position after 6 seconds (when $t = 6$ sec.) Find the slope of the line in each case and state what it represents.

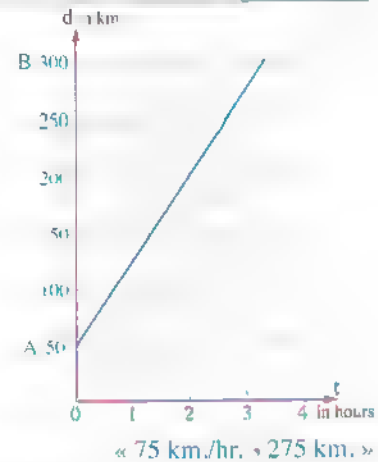

- 4 The opposite graph represents the motion of a car moving with uniform velocity. Determine the velocity of the car.

- 5 Bassem drove his car from the city A to the city B. The opposite graph shows the relation between the distance d in km. and the time t in hours.

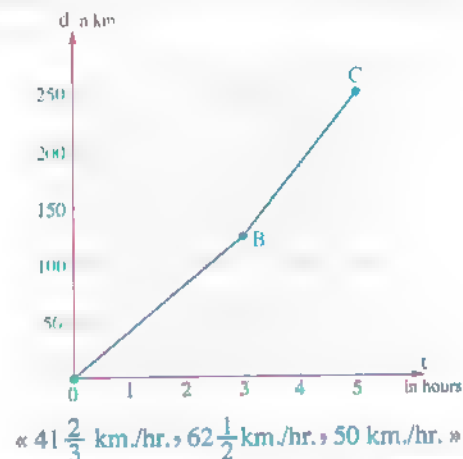

Answer the following :

- 1 What is the uniform velocity of the car of Bassem ?
- 2 Find the distance between the car and the point O after three hours from the moment of beginning.

- 6 The opposite graph represents the motion of a car :

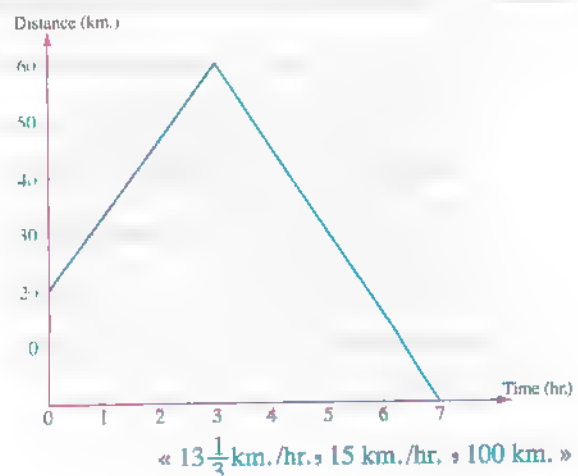

- 1 Find the velocity of the car within the first three hours from the beginning , then find the velocity within the next two hours.
- 2 Find the average velocity of the car within the total time.

- 7 The opposite figure represents the motion of a bicycle measured from a constant point. Find the regular velocity of the bicycle during :

- 1 The first three hours.
- 2 The next four hours.

Find the total distance covered by the bicycle.

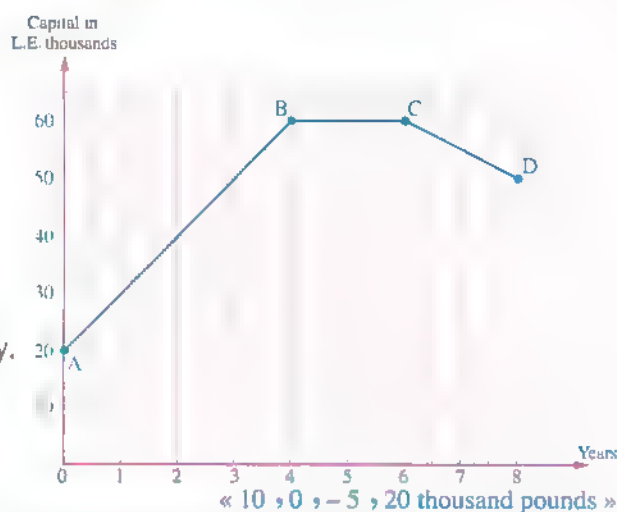

- 8 The opposite figure shows the capital change of a company during 8 years :

- 1 Find the slope of each of \overrightarrow{AB} , \overrightarrow{BC} and \overrightarrow{CD}

What is the meaning of each ?

- 2 Find the starting capital of the company.

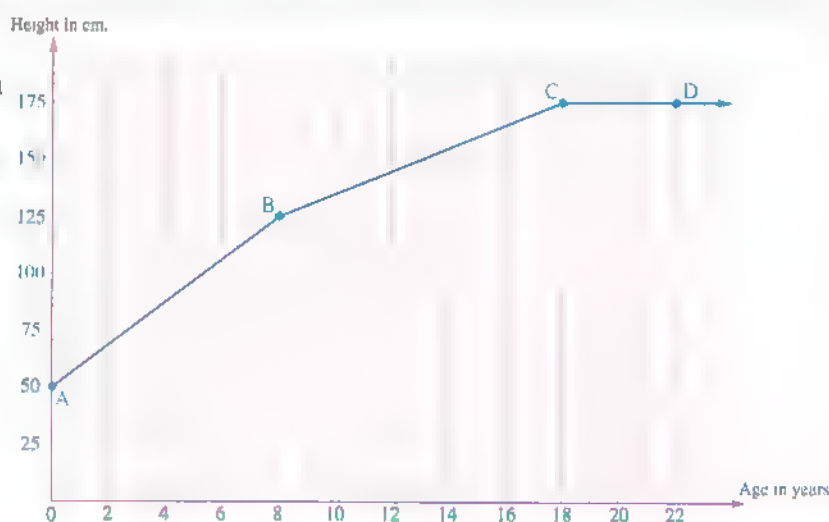

- 9 The opposite figure shows the relation between the height of a person (in cm.) and his age (in years) :

- 1 Find the slope of each of \overrightarrow{AB} , \overrightarrow{BC} and \overrightarrow{CD}

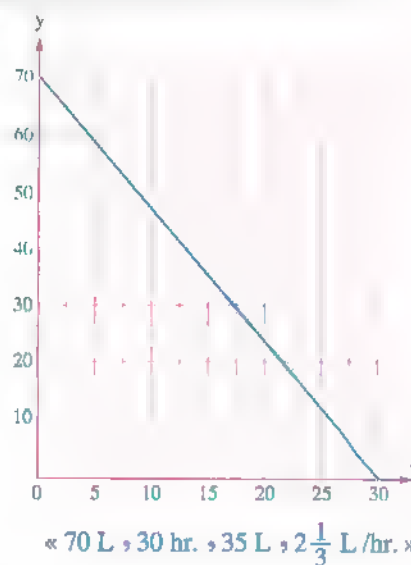

What is the meaning of each ?

- 2 Calculate the difference between the height of this person when he was 8 years old and his height when he was 30 years old.

- 10 Magdi filled the tank of his car by fuel. The opposite figure represents the relation between the time (t) in hours and the amount of remained fuel in the tank (y) in litres :

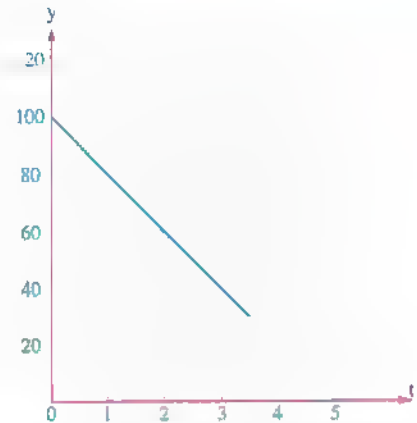

- 1 What is the greatest capacity of the tank ?
- 2 When will the tank become empty ?
- 3 What is the amount of remained fuel after 15 hours ?
- 4 What is the range of consumption of fuel in each hour ?

11 A person read a book.

The opposite graph shows the relation between the time (t) in hours and the number of remained pages (y) :

- 1 How many pages are remained in the beginning ?
- 2 Find the rate of reading pages per hour.
- 3 When does this person finish reading this book ?

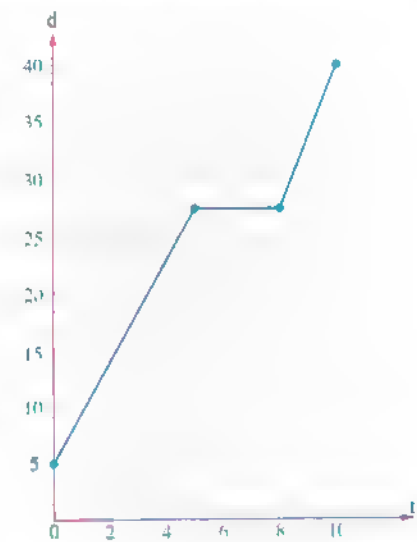

« 100 pages , 20 pages/hr. , after 5 hours »

12 A farmer wanted to complete digging a well in his farm.

He rented a digging machine. The opposite graph shows the depth of the well (d) in metres after time (t) in hours , find :

- 1 The depth of the well before beginning digging.
- 2 The depth of the well after finishing digging.
- 3 The total time which the machine took in digging the well.
- 4 The average of depth of the well which the machine digs within the first five hours.
- 5 The average of the depth of the well within the last two hours of digging.

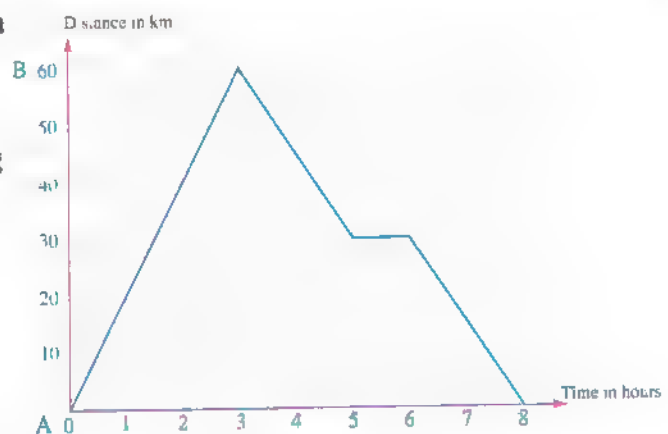

« 5 m. , 40 m. , 10 hr. , 4.5 m./hr. , 6.25 m./hr. »

13 The opposite graph shows the relation between the distance in km. and the time (t) in hours for a bicycle which moved between two towns A and B going and returning back.

Answer the following :

- 1 What is the uniform velocity during the going trip ?
- 2 What is the average velocity during returning back ?
- 3 What is the meaning of the horizontal line segment in the graph ?

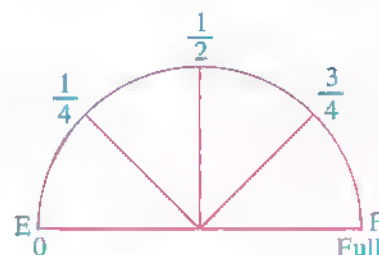

« 20 km./hr. , 12 km./hr. »

- 14 Hazem filled up the 40 L tank of his car.

After covering a distance of 120 km., the fuel gauge shows that the rest of fuel is $\frac{3}{4}$ of the tank.

Draw a diagram to show the relation between the amount of fuel in the tank and the covered distance
(This relation is linear).

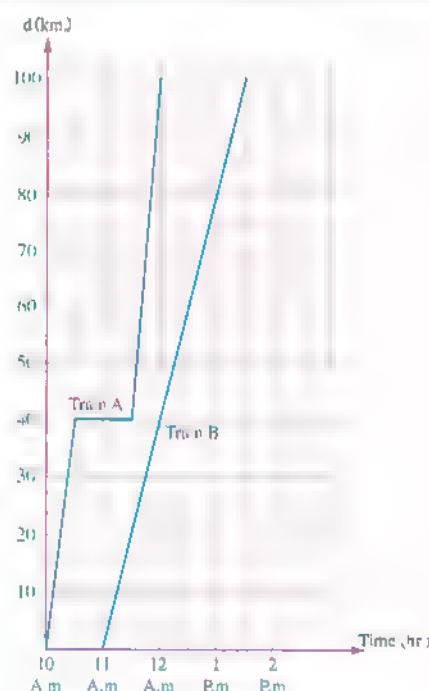

Calculate the covered distance until the tank totally gets empty.

« 480 km. »

- 15 The opposite diagram shows the relation between the covered distance (in km.) and the elapsed time (in hr.) for two trains A and B between two railway stations.

Use the diagram to find :

1. The distance between the two railway stations.
2. The elapsed time of each train.
3. The average speed of each train.
4. The meaning of the horizontal segment in the diagram of train A

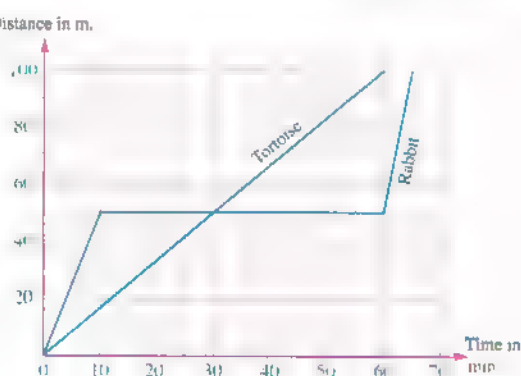

« 100 km., 2 hr., 2.5 hr., 50 km./hr., 40 km./hr. »

- 16 The opposite graph shows the race of 100 metres between a rabbit and a tortoise.

Answer the following :

1. Which of them is the winner ?
2. What is the velocity of the tortoise ?
3. What is the average velocity of the rabbit ?
4. What is the meaning of the horizontal line segment in the graph ?

« tortoise, $1\frac{2}{3}$ m./min., $1\frac{7}{13}$ m./min. »

For excellent pupils

- 17 During the motion of a bicycle with a uniform velocity in a straight line , the distances between the bicycle and a fixed point have been registered after periods measured in hours from the moment of beginning the motion in the following table :

The distance between the bicycle and the fixed point	125	150	175	200
The passed time in hours	2	4	6	8

Graph the relation between the distance between the bicycle and the fixed point and the passed time. From the graph , find :

- 1 The velocity of the bicycle in km./hr.
- 2 The distance between the bicycle and the fixed point after 300 minutes.
- 3 The time at which the bicycle is at a distance = 187.5 km. from the fixed point.
- 4 The distance between the starting point of the bicycle and the fixed point.

« 12.5 km./hr. , 162.5 km. , 7 hr. , 100 km. »

A Research Project

On Unit Two

Project aims :

- Recognizing the relation between two variables of the first degree.
- Representing the relation between two variables of the first degree graphically.
- Using algebra to solve life problems.
- Associating mathematics with social studies.

Do a research project on the following topic :

"Doing sports is the start on the road of a more healthy life. Our Arab champs have achieved a lot of important achievements in many world competitions".

Discuss the following points using available resources :

- 1 State some achievements of our champs of Arab countries in the field of sports.
- 2 In football matches, a team gets three points in case of winning and one point in case of a draw. If one team scored 30 points :
 - * Write the mathematical relation between (x) and (y) , where (x) is the number of matches a team wins and (y) is the number of matches, the team are held to a draw. From this relation, write five different methods to score 30 points.
 - * Represent this relation graphically.

Exercises of the unit :

- 14.** Collecting and organizing data.
- 15.** The ascending and descending cumulative frequency tables and their graphical representation.
- 16.** Mean.
- 17.** Median.
- 18.** Mode.

Collecting and organizing data

From the school book

Remember Understand Apply Problem Solving

- 1 The following are the weights of 40 pupils of one class of the second year preparatory in kg. The required is forming the frequency table with sets.
Use the subsets (25–, 30–, 35–,):

36	30	42	37	25	34	35	28	30	28
29	36	38	32	44	39	34	36	35	30
30	35	30	38	27	41	33	39	31	36
36	33	37	31	43	35	40	31	39	45

- 2 The following are the weekly wages of 40 workers in a factory in L.E.:

47	71	36	94	54	64	87	89	62	57
51	61	44	52	70	66	56	32	69	36
79	48	77	90	65	99	96	67	60	55
95	75	81	84	78	38	49	94	48	59

Required: Form a frequency table with sets (use the subsets: 30–, 40–, 50–,, 90–)
What is the set with the highest frequency? What is the set with the lowest frequency?

- 3 The following are the scores of 30 students in a monthly math exam:

25	35	40	20	30	37	40	33	22	38
35	36	28	37	39	28	32	26	29	37
23	34	35	36	29	38	40	35	37	31

- 1 From a frequency table with sets for these scores.
- 2 Find the total number of excellent students. The excellence rate is 36 marks or more.

« 12 students »

- 4 The following are the marks of the students in a class in the second year preparatory in algebra exam. Given that their number is 40 students and the full mark is 20 marks :

7	11	7	13	14	3	18	13	10	14
16	8	15	12	5	15	11	12	6	11
8	9	15	8	15	14	7	10	14	19
10	7	2	10	12	4	11	17	13	15

The required is forming a frequency table with sets for the marks of students in algebra using the subsets 0 - , 4 - , 8 - , and so on , then find the percentage of the number of students who obtained 12 marks at least.

« 47.5% »

- 5 The following are the heights of 50 persons in centimetres :

155	183	163	181	186	144	199	150	182	166
197	126	188	158	153	130	163	166	154	173
137	163	146	198	164	156	173	177	157	118
138	187	178	173	184	143	147	142	176	160
170	194	154	167	149	112	196	128	126	156

Using the previous data :

Find the least height in these data and the greatest height and the range in which these two heights lie.

« 112 cm. , 199 cm. , 87 cm. »

- 2 Form a frequency table using sets of length 10 centimetres for each.

- 6 In a military camp , the heights of 55 soldiers were measured in centimetres , their measures were as follows :

169	194	200	185	165	188	166	186	181	176	173
177	179	188	170	193	180	173	173	184	192	167
182	168	186	189	171	179	172	175	175	181	166
185	177	175	165	190	172	177	178	184	166	174
178	177	172	174	175	179	195	176	189	187	189

Form a frequency table using the sets (165 - , 170 - , 175 - ,)

From the table , find :

- 1 The number of soldiers whose heights are less than 185 cm.
2 The number of soldiers whose heights are 180 cm. at least.

« 39 soldiers »

« 22 soldiers »

The ascending and descending cumulative frequency tables and their graphical representation

 From the school book

● Remember ● Understand ● Apply ● Problem Solving

Problems on the ascending cumulative frequency curve

- 1  The following table shows the frequency distribution of the scores of 50 students in an experimental math exam :

Sets	2–	6–	10–	14–	18–	22–	26–	Total
Frequency	3	5	9	10	12	7	4	50

Graph the ascending cumulative frequency curve.

- 2 The following frequency table represents the marks of 60 pupils in math :

Sets	10–	20–	30–	40–	50–	Total
Frequency	9	11	13	17	10	60

Graph the ascending cumulative frequency curve and if the success mark is 30 marks , find the number of failed pupils.

« 20 pupils »

- 3 The following table shows the frequency distribution of 100 factories according to the number of weekly work hours :

Sets of hours	50–	60–	70–	80–	90–	100–	Total
Number of factories	5	16	30	22	15	12	100

- Graph the ascending cumulative frequency curve of this distribution.
- From the graph , find the number of factories which work less than 75 hours in the week.

« 37 factories »
- Find the percentage of the number of factories which work less than 75 hours in the week.

« 37 % »

Problems on the descending cumulative frequency curve

- 4 The following table shows the frequency distribution of the daily wages of some workers :

Sets	5–	10–	15–	20–	25–	30–	Total
Frequency	10	14	24	30	12	10	100

Graph the descending cumulative frequency curve.

- 5 A class has 50 pupils , the following table shows the distribution of studying hours among them every day :

Sets	1–	2–	3–	4–	5–	6–	7–	Total
Freq.	2	3	5	12	15	7	6	50

- Graph the descending cumulative frequency curve of this distribution.
- From the graph , find the number of pupils who study 6 hours or more daily. « 13 pupils »
- Find the percentage of the number of pupils who study 6 hours or more daily. « 26 % »

- 6 The following table shows the frequency distribution of a group of 60 persons according to their weights in kg. :

Sets of weights in kg.	55 –	60 –	65 –	70 –	75 –	80 –	85 –	Total
No. of persons	8	12	18	7	3	2	60

Complete the table , then graph the descending cumulative frequency curve of this distribution and from the graph , find the number of persons whose weigh 68 kg. or more for each. « 28 persons »

Problems on the two curves together

- 7 Graph the ascending and descending curves for the following frequency distribution :

Sets	8–	12 –	16–	20–	24–	28 –	32 –	36	40	Total
Freq.	4	7	12	18	20	19	11	6	3	100

- 8 The following table shows the frequency distribution of the scores of 1000 students in a final year exam :

Percentage	20–	30–	40–	50–	60–	70–	80–	90–	Total
Number of students	30	70	160	260	150	130	110	90	1000

- Graph the ascending and descending cumulative frequency curves.
- Find the number of students whose scores are less than 75% « 740 students »
- Find the number of students whose scores are 85% or more. « 140 students »

- 9 The following are the scores of 100 students in an experimental math exam :

Sets	0–	10–	20–	30–	40–	50–	Total
Frequency	8	14	15	28	23	12	100

- Form both the ascending and descending cumulative frequency tables.
- Graph both the ascending and descending cumulative frequency curves on the same graph paper.
- From the graph , find the number of students who got less than 40 marks and those who got 40 marks or more. « 65 students , 35 students »
- Find the percentage of the number of students who succeeded given that the success mark is 20 marks. « 78 % »
- Find the percentage of the number of students who got 45 marks or more. « 23 % »

For excellent pupils

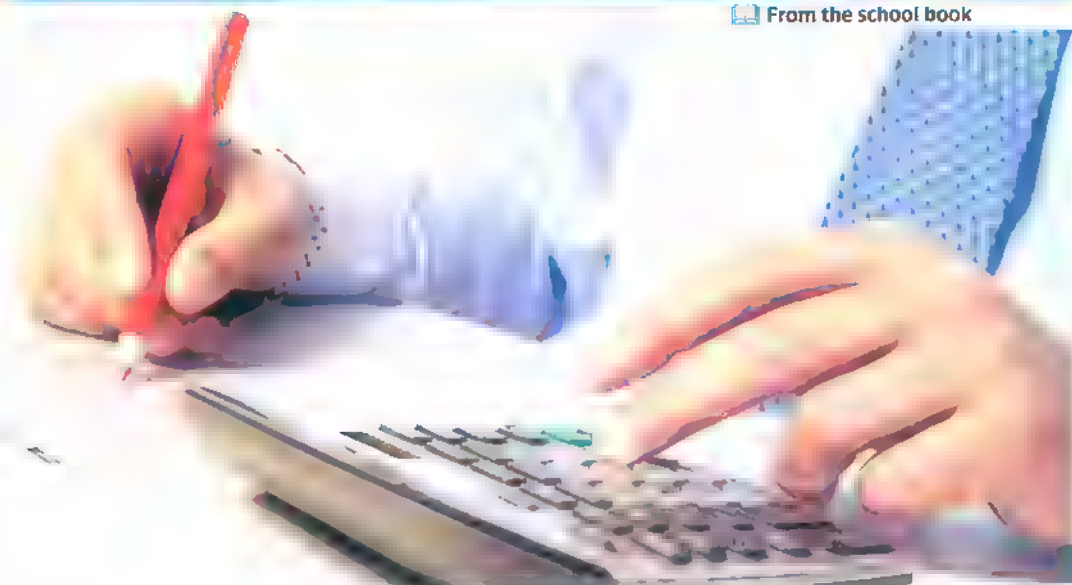

- 10 A factory has 120 workers whose experiences are from 5 years to 35 years.

The opposite table shows the descending cumulative frequency distribution for those workers according to the years of experience :

- Deduce from the table the frequency table.
- Form the ascending cumulative frequency table.
- Graph the ascending cumulative frequency curve.
- From the graph , deduce the number of workers whose experience years are less than 17.5 years.

Lower boundaries of sets	Descending cumulative frequency
5 and more	120
10 and more	113
15 and more	93
20 and more	64
25 and more	27
30 and more	12
35 and more	0

« 40 workers »

Problem Solving

1 Complete the following :

- 1 The mean of a set of values = $\frac{\text{Sum of values}}{\text{Number of values}}$
- 2 The centre of the set = $\frac{\text{Lower limit} + \text{Upper limit}}{2}$
- 3 The arithmetic mean of the values : 5 , 12 , 17 , 6 is
- 4 If the lower limit of a set is 8 and the upper limit of the same set is 14 , then its centre is
- 5 If the lower limit of a set is 4 and its centre is 9 , then its upper limit is
- 6 If the mean of a frequency distribution is 39.4 and the total of frequencies is 100 , then the total of the products of frequencies of the sets by their centres is

2 Choose the correct answer from those given :

- 1 The mean of the values : $2 - a$, 4 , 1 , 5 , $3 + a$ is
(a) 1 (b) 2 (c) 3 (d) 15
- 2 If the mean of marks of 5 pupils is 20 , then the sum of their marks is marks.
(a) 4 (b) 15 (c) 25 (d) 100
- 3 The centre of the first set of the sets : $7 -$, $13 -$, $19 -$, $25 -$ is
(a) 6 (b) 7 (c) 10 (d) 13
- 4 If the upper limit of a set is 14 and its centre is 10 , then its lower limit is
(a) 5 (b) 6 (c) 20 (d) 24
- 5 If the beginning of a set is 5 and its centre is 7.5 , then the length of the set is
(a) 5 (b) 7.5 (c) 10 (d) 12.5

- 3 Find the mean of the following frequency distribution :

Sets	5 –	15 –	25 –	35 –	Total
Frequency	6	8	4	2	20

« 21 »

- 4 The following table shows the frequency distribution of marks of 10 students in mathematics :

Sets	10 –	20 –	30 –	40 –	50 –	Total
Frequency	1	2	4	2	1	10

- 1 Calculate the mean of marks of students.
- 2 If the mark of success is 30 , calculate the number of failed students.

« 35 marks , 3 students »

- 5 The following table shows the frequency distribution of weekly wages of 100 workers in one factory :

Sets	16 –	20 –	24 –	28 –	32 –	36 –	Total
Frequency	10	15	22	25	20	8	100

Calculate the mean.

« 28.16 »

- 6 The following table shows the frequency distribution of extra wages of 30 workers :

Sets	15 –	25 –	35 –	45 –	55 –	65 –	75 –	Total
Freq.	2	3	5	8	6	4	2	30

Find the arithmetic mean.

« 51 »

- 7 The following table shows the frequency distribution of the heights of 120 students in centimetres :

Height (in cm.)	140 –	144 –	148 –	152 –	156 –	160 –	Total
Frequency	12	20	38	22	17	11	120

Find the mean.

« 151.5 cm. »

- 8 The following table shows the frequency distribution of number of daily studying hours of 50 pupils in a class :

Number of hours	1 -	2 -	3 -	4 -	5 -	6 -	7 -	Total
Number of pupils	2	3	5	12	15	7	6	50

- 1 Calculate the mean of the number of hours of study per day.
- 2 Find the number of pupils who study less than 4 hours daily. « 5.1 hours , 10 pupils »

- 9 The following table shows the distribution of marks of 40 students in one exam :

Sets	5 -	15 -	35 -	45 -	Total
Number of students	3	12	10	5	40

- 1 Complete the table.
- 2 Calculate the mean.
- 3 Find the number of students whose marks are not less than 35 marks.
« 31 marks , 15 students »

- 10 The following table shows the frequency distribution of the weights of 30 children in kg. :

Weight (kg.)	6 -	10 -	14 -	18 -	22 -	26 -	30 -	Total
Frequency	2	3	8	6	4	2	30

Complete the table , then find the mean of this distribution. « 20.4 kg. »

- 11 Using the following set frequency table (given that the sets are equal in range) :

Sets	10 -	20 -	X -	40 -	50 -	60 -	Total
Frequency	10	17	20	32	k + 2	4	100

Find :

- 1 The value of each of X and k
- 2 The mean of this distribution. « X = 30 , k = 15 , 39.1 »

- 12** The following table shows the frequency distribution of weights of 50 pupils in kg. in one school :

Weight in kg.	30 –	35 –	40 –	45 –	50 –	55 –	Total
Number of pupils	7	3 k	4 k	10	8	4	50

- 1 Calculate the value of k
- 2 Find the mean of this distribution. « 3 , 44 kg. »

- 13** The following table shows the frequency distribution of 50 workers days-off :

Sets	2 –	6 –	10 –	14 –	18 –	22 –	26 –	Total
Frequency	4	5	8	k – 2	7	5	1	50

Find :

- 1 The value of k
 - 2 The mean. « 22 , 15.2 days »
- 14** If the mean of the scores of a student during the first 5 months is 23.8 , what is the score of the 6th month if the mean of his scores is 24 marks ? « 25 marks »
- 15** If the mean of marks of Magdi in 4 exams is 16 marks , what is the mark which he should obtain in the fifth exam so that his mean in the five exams will be 18 marks ? « 26 marks »

For excellent pupils

- 16** The opposite table is for finding the mean of marks of m pupils in one exam :

- 1 Deduce the value of each of : a , b , c , d , e , f , x , y , z and m
- 2 Find the mean of these marks.

Sets	Centres of sets	Frequency	Centres of sets × frequency
0 –	a	5	10
4 –	b	b	90
d –	c	30	300
12 –	e	z	y
16 –	f	10	x
Total		m	1140

Problem Solving

1 Choose the correct answer from those given :

- 1 The median of the values : 9 , 4 , 8 , 1 and 3 is
 (a) 3 (b) 4 (c) 5 (d) 8
- 2 The median of the values : 3 , 7 , 2 , 9 , 5 and 11 is
 (a) 12 (b) 7 (c) 6 (d) 5
- 3 The order of the median of the values : 7 , 6 , 5 , 8 and 4 is
 (a) third. (b) fourth. (c) fifth. (d) sixth.
- 4 If the order of the median of a set of values is the fourth , then the number of these values equals
 (a) 4 (b) 5 (c) 6 (d) 7
- 5 If the median of the values : $k + 1$, $k + 2$, $k + 5$, $k + 4$ and $k + 3$ where k is a positive integer is 13 , then $k =$
 (a) - 10 (b) 10 (c) 13 (d) 16
- 6 The point of intersection of the ascending and descending cumulative frequency curves determines on the set-axis.
 (a) the mean (b) length of the set
 (c) centre of the set (d) the median
- 7 If the the point of intersection of the ascending and descending frequency curves is (30 , 50) , then the sum of frequencies is
 (a) 30 (b) 50 (c) 60 (d) 100

- 2 Using the ascending cumulative frequency curve, find the median of the following frequency distribution :

Sets	0–	2–	4–	6–	Total
Frequency	1	2	2	5	10

« 6 »

- 3 The following table shows the frequency distribution of 40 persons according to the percentage of intelligence of each of them :

Sets of intelligence percentage	40–	50–	60–	70–	80–	90–	Total
Number of persons	1	3	8	14	10	4	40

Using the ascending cumulative frequency curve, find the median of percentage of intelligence.

« Approximately 75 % »

- 4 The following table shows the frequency distribution of 100 factories according to the number of weekly working hours :

Sets of hours	50–	60–	70–	80–	90–	100–	Total
Number of factories	5	8	12	28	33	14	100

Find using the descending cumulative frequency curve the median number of hours of work of these factories.

« 89.5 hours »

- 5 The following table shows the frequency distribution of 50 workers' wages in pounds :

Sets of wages	300–	400–	500–	600–	700–	Total
Number of workers	8	12	18	7	5	50

Graph the descending cumulative frequency curve, then find the median.

« 520 pounds »

- 6 The following table shows the frequency distribution of marks of 60 students in mathematics exam :

Sets of marks	5–	10–	15–	20–	25–	30–	35–	Total
Number of students	2	5	14	20	13	5	1	60

Find the median mark.

« 22 marks »

- 7  The following table shows the frequency distribution of weights of 20 children in kg. :

Sets	5–	15–	25–	35–	45–	Total
Frequency	3	4	7	4	2	20

Find the median weight in kg. using the ascending and descending cumulative frequency curves of this distribution. « 29 kg. »

- 8 The following table shows the distribution of the students of a secondary school in a governorate according to their ages in years :

Sets of ages in years	14–	15–	16–	17–	18–	19–	Total
Frequency	90	130	110	80	70	20	500

Graph the ascending and descending cumulative frequency curves of this distribution , then find the median age. « 16.3 years »

- 9 The following table shows the frequency distribution of the marks of 90 students in a monthly exam :

Sets of marks	10–	14–	18–	22–	26–	30–	34–	Total
Number of students	8	10	24	21	12	9	6	90

Find the median mark using the ascending and descending cumulative frequency curves. « 22.5 marks »

- 10  The following table shows the frequency distribution for the scores of 50 students in an examination :

Sets	2–	6–	10–	14–	18–	22–	26–	Total
Frequency	3	5	9	10	12	7	4	50

Find : 1 The mean of the student's score.

2 The median.

« 16.8 , 17.6 »

- 11  From the following frequency table with equal sets in range :

Sets	10–	20–	X–	40–	50–	60–	Total
Frequency	10	17	20	32	k + 2	4	100

1 Find the value of each of X and k

« X = 30 , k = 15 »

2 Graph the ascending and descending cumulative curves on one figure , then calculate the median.

« 41 »

1 Choose the correct answer from those given :

- 1 The mode of a set of values is
 - (a) $\frac{\text{sum of values}}{\text{number of these values}}$
 - (b) the most common value.
 - (c) the middle value after rearranging the values ascendingly or descendingly.
 - (d) the point of intersection of the ascending and descending cumulative frequency curves.
- 2 The mode of the values : 5 , 3 , 8 , 5 , 9 is
 - (a) 3
 - (b) 5
 - (c) 8
 - (d) 9
- 3 The mode of the values : 8 , 7 , 8 , 7 , 6 , 5 , 8 is
 - (a) 8
 - (b) 7
 - (c) 6
 - (d) 5
- 4 If the mode of the values : 4 , a , 5 , 3 is 3 , then a =
 - (a) 5
 - (b) 4
 - (c) 3
 - (d) 6
- 5 If the mode of the values : 12 , 7 , $x + 1$, 7 , 12 is 7 , then $x =$...
 - (a) 12
 - (b) 11
 - (c) 7
 - (d) 6
- 6 If the mode of the values : 4 , 11 , 8 , 2 x is 4 , then $x =$
 - (a) 1
 - (b) 2
 - (c) 4
 - (d) 8
- 7 If the mode of the values : 5 , 3 , $\sqrt{x-1}$, 4 is 3 , then $x =$
 - (a) 3
 - (b) 4
 - (c) 8
 - (d) 10

- 2** A factory has 600 workers. A sample of 120 workers is taken such that it represents the all groups very well. It is found that the distribution of their ages in years is as the following table :

Age	25–	30–	35–	40–	45–	50–	Total
Number of workers	12	17	18	40	25	8	120

Draw the histogram , then deduce the mode age.

« 43 years »

- 3** The following table shows the frequency distribution of marks of 100 pupils in an exam :

Sets of marks	10–	14–	18–	22–	26–	30–	34–	Total
Number of pupils	2	10	15	40	25	6	2	100

Find the mode mark using the histogram of this distribution.

« 24.5 marks »

- 4** The following is the frequency distribution of 100 workers in one of the factories according to their daily wages :

Sets of wages in pounds	10–	15–	20–	25–	30–	35–	40–	Total
Number of workers	6	12	16	24	20	14	8	100

Draw the histogram of this frequency distribution , then deduce the mode wage of the worker.

« 28.5 pounds »

- 5** Find the mode of the following frequency distribution for the scores of 40 students in an examination :

Sets of marks	30–	40–	50–	60–	70–	80–	Total
Frequency	3	4	12	8	7	6	40

« 57 »

- 6** The following is the frequency distribution of ages of 45 persons :

Sets of ages in years	12–	14–	16–	18–	20–	22–	24–	Total
Number of persons	5	7	8	12	6	4	3	45

Find the mode age.

« 18.8 years »

- 7 The following table shows the frequency distribution of the heights of 200 students :

Height in cm.	110–	115–	120–	125–	130–	135–	140–	Total
Number of students	10	12	28	35	60	40	15	200

Graph the frequency histogram , then find the mode height.

« 132.75 cm. »

- 8 The following table shows the frequency distribution of 102 cows according to the weekly amount of milk in galoons :

Sets of milk in galoons	14–	16–	18–	20–	22	24	Total
Number of cows	8	16	28	20	18	12	102

Use the histogram of this distribution to find the mode of the weekly amount of milk.

« 19.2 galoons »

- 9 The following table shows the frequency distribution of marks of 100 pupils in mathematics at the end of the year :

Marks	15–	20–	25–	30–	35–	40–	45–	50–	55–	Total
Number of pupils	4	6	8	12	16	20	22	7	5	100

Graph the histogram of that distribution , then find the mode mark.

« 45.5 marks »

- 10 The following table shows the frequency distribution of the weights of 100 children in kg. :

Weight in kg.	10–	14–	18–	22–	26–	30–	Total
Frequency	5	15	30	24	17	9	100

Find the mode weight.

« 20.8 kg. »

- 11 The following table shows the frequency distribution of the weights of 50 students in kg. :

Weight in kg.	30–	35–	40	45–	50–	55–	Total
Number of students	$k + 4$	$3k$	$4k$	$3k + 1$	$3k - 1$	$k + 1$	50

- 1 Find the value of k

« 3 »

- 2 Graph the frequency histogram , then find the mode.

« 43 kg. »

- 12 The following table shows the frequency distribution with equal range sets for the weekly wages of 100 workers in a factory :

Sets of wages in L.E.	70–	80–	90–	100–	X–	120	130–
Number of workers	10	13	k – 4	20	16	14	11

Find : 1 The value of each of X and k

« $X = 110$, $k = 20$ »

2 The mode of wages in L.E.

« 105 pounds »

- 13 The following is the frequency distribution of 100 workers of building according to the number of weekly working hours :

Sets of working hours	35	45–	55–	65	75–	85–	Total
Number of workers	15	30	23	20	8	4	100

The required is finding :

1 The mean.

« 58.8 hours »

2 The median.

« 57.5 hours »

3 The mode.

« 52 hours »

- 14 The following is the frequency distribution of the weekly bonus of 100 workers in a factory :

Bonus in L.E.	20–	30–	40–	50–	60–	70–
No. of workers	10	k	22	26	20	8

1 Calculate the value of k

« 14 »

2 Find the mean of this distribution.

« 50.6 pounds »

Find the mode value of the weekly bonus using the histogram.

« 54 pounds »

- 15 The following table shows the frequency distribution for the weights of 50 students in kg. at a school :

Weight in kg.	30–	35–	40–	45–	50–	55–	Total
Number of students	7	3 k	4 k	10	8	4	50

1 Find the value of k

« 3 »

2 Calculate the mean.

« 44 kg. »

3 Draw the ascending cumulative frequency curve.

4 Draw the histogram and find the mode of weights.

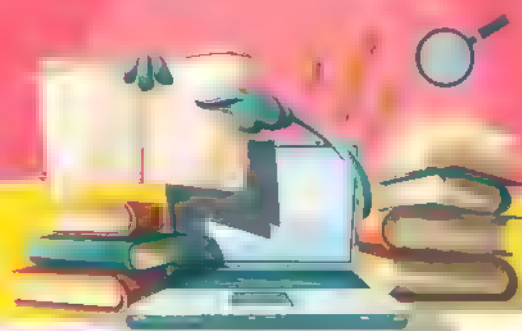

« 43 kg. »

5 Find the median.

« 43.5 kg. »

A Research Project

On Unit Three

Project aims :

- Organizing data in frequency tables with sets.
- Forming the ascending cumulative frequency table and graphing it.
- Finding the mean and the mode of some data organized in a frequency table with sets.
- Finding the median of a frequency distribution with sets.
- Appreciating the role of statistics in practical life.

Do a research project on the following topic :

"Statisticians use several measurement tools to measure the central tendency, as the mean, the median and the mode".

Discuss the following points using available resources :

- 1 Define the mean, the median and the mode.
- 2 Record the marks of your mates in class in a test of mathematics, then do the following :
 - * Organize this data in a tally table, then form the frequency table with sets.
 - * From the frequency table with sets, calculate the mean of the marks of your mates.
 - * Using the frequency table with sets, draw the histogram and then find the mode mark.
 - * Form the ascending cumulative frequency table, then represent it by the ascending cumulative frequency curve. At last, find the median mark.

TIMSS Problems

Accumulative basic skills

1 Complete the following :

- 1 A turtle covers 80 metres per hour , then it covers 8 metres in minutes.
- 2 The sum of the real numbers in the interval $[-12, 12]$ equals
- 3 If $\bigcirc + \square = 20$, $\bigcirc + \bigcirc + \square = 35$, then $\bigcirc = \dots\dots\dots$
- 4 In three games of bowling , Sara gained 139 , 143 , 144 points , then the number of points she needs in the 4th game so that the mean of points is 145 , is
- 5 Two boxes of apples , the sum of their weights is 54 kg. The first has 12 kg. more than the second , then the number of kilograms in the second box is kg.
- 6 $300 \div 200 = 1 \div \dots\dots\dots$
- 7 $(301 + 302 + 303 + \dots + 325) - (1 + 2 + 3 + \dots + 25) = \dots\dots\dots$
- 8 If four times a number is 48 , then $\frac{1}{3}$ this number is
- 9 Gamal has 3 sisters and 5 brothers , his sister Sara has x sisters and y brothers , then $x \cdot y = \dots\dots\dots$
- 10 If $a + b + c = 26$, $a + b = 15$, $b + c = 20$, then $b = \dots\dots\dots$
- 11 Three girls can perform a work in 36 hours , then the needed hours for four girls to perform the same work is hours.

12 If

$$\begin{array}{r}
 \square \quad \square \quad \bigcirc \\
 \square \quad \square \quad \triangle \\
 + \quad \square \quad \triangle \quad \square \\
 \hline
 2 \quad 0 \quad 1 \quad 6
 \end{array}$$

, then $\square = \dots$, $\triangle = \dots\dots\dots$, $\bigcirc = \dots\dots\dots$

2 Choose the correct answer from the given ones :

1 The number 3.015 lies on the number line between

- (a) $\frac{5}{2}$, 3 (b) $\frac{7}{2}$, $\frac{11}{3}$ (c) 3, $\frac{16}{5}$ (d) 3.12, 3.15

2 Which of the following numbers lies between 0.07, 0.08 ?

- (a) 0.00075 (b) 0.0075 (c) 0.075 (d) -0.75

3 Which of the following is different in value ?

- (a) $1 \div 9 + 9 - 1$ (b) $1 + 9 \div 9 - 1$ (c) $1 - 9 + 9 \times 1$ (d) $1 \times 9 - 9 + 1$

4 If x is a negative number, which of the following is a positive number ?

- (a) x^2 (b) x^3 (c) $2x$ (d) $\frac{x}{2}$

5 The greatest number of the following is

- (a) -1.25 (b) -0.125 (c) -0.0125 (d) -0.00125

6 The best estimation to the number opposite to x is ..

- (a) 1.1 (b) 1.2 (c) 1.5 (d) 1.7

7 If 10% of x equals y , then $x =$

- (a) 0.1 y (b) y (c) 9 y (d) 10 y

8 If $x = (-2)^4$, $y = -2^4$, then

- (a) $x = y$ (b) $x > y$ (c) $x < y$ (d) $x \leq y$

9 $\sqrt[4]{81 \times 81 \times 81 \times 81} =$

- (a) 3 (b) 9 (c) 27 (d) 81

10 For any number k , then $k + k + (k \times k \times k)$ can be written as

- (a) $2k^2 + 3k$ (b) $5k$ (c) k^5 (d) $2k + k^3$

11 A machine produces two kinds of rods, one is red and of length (10 ± 0.5) cm. and the other is white and of length (6 ± 0.5) cm.

If we put two rods as shown in the opposite figure, then the smallest difference between their lengths may be

- (a) 4 cm. (b) 5 cm. (c) 3 cm. (d) 8.5 cm.

12 All numbers divisible by 4 and 15 are divisible by

- (a) 6 (b) 8 (c) 24 (d) 45

1 Complete the following :

- 1 In $\triangle ABC$, if D is the midpoint of \overline{BC} , then \overline{AD} is called
- 2 The number of medians of the triangle is
- 3 The medians of the triangle intersect at
- The point of concurrence of the medians of the triangle divides each median in the ratio : from its base.
- The point of concurrence of the medians of the triangle divides each median in the ratio : from the vertex.
- The point of intersection of the medians of the triangle divides each of them in the ratio 2 : from the base.
- The point of intersection of medians of the triangle divides each of them in the ratio : 8 from the vertex.

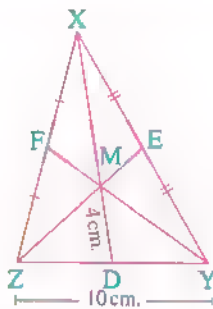

2 Choose the correct answer from those given :

- 1 The number of medians of the obtuse-angled triangle is
 (a) zero (b) 1 (c) 2 (d) 3
- 2 If \overline{YD} is a median in $\triangle XYZ$, M is the point of intersection of medians, then $MD = \dots\dots\dots YM$
 (a) $\frac{1}{2}$ (b) $\frac{1}{3}$ (c) $\frac{2}{3}$ (d) $\frac{3}{2}$
- 3 If M is the point of intersection of medians of $\triangle ABC$, \overline{BD} is a median, then $BD : MD = \dots\dots\dots$
 (a) 2 : 3 (b) 1 : 3 (c) 3 : 2 (d) 3 : 1

- 4 If \overline{AD} is a median in $\triangle ABC$, M is the point of intersection of medians, then $AD = \dots\dots\dots AM$
 (a) $\frac{1}{3}$ (b) $\frac{1}{2}$ (c) $\frac{2}{3}$ (d) $\frac{3}{2}$
- 5 If \overline{AD} is a median in $\triangle ABC$ of length 9 cm., M is the point of intersection of medians, then $DM = \dots\dots\dots$ cm.
 (a) 3 (b) 4.5 (c) 6 (d) 9
- 6 If M is the point of intersection of the medians of $\triangle ABC$, \overline{AD} is a median of length 6 cm., then $AM = \dots\dots\dots$ cm.
 (a) 1 (b) 2 (c) 3 (d) 4
- 7 If M is the point of intersection of the medians of $\triangle ABC$, D is the midpoint of \overline{BC} , then $AD = \dots\dots\dots$
 (a) $2 AM$ (b) $\frac{2}{3} MD$ (c) $\frac{3}{2} AM$ (d) $4 MD$

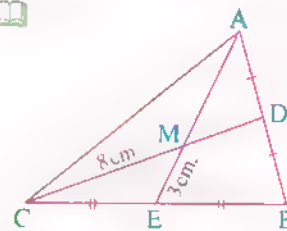

3 Using data given for each of the following figures, find the required below each figure :

1

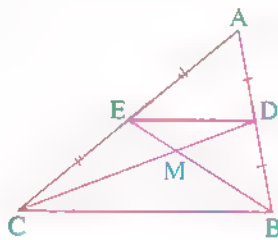

$XM = \dots\dots\dots$ cm. and
 $YD = \dots\dots\dots$ cm.

2

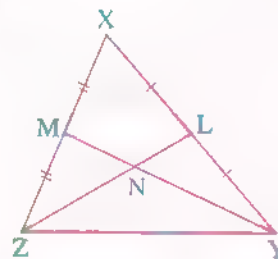

$MA = \dots\dots\dots$ cm.,
 $MD = \dots\dots\dots$ cm.,
 $ME = \dots\dots\dots AE$
 and $MC = \dots\dots\dots CD$

3

If $BC = 12$ cm., $BE = 9$ cm.
 and $MC = 8$ cm.,
 then $DE = \dots\dots\dots$ cm.,
 $ME = \dots\dots\dots$ cm. and
 $MD = \dots\dots\dots$ cm.

4

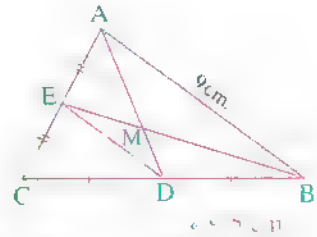

If $LZ = 15$ cm., $YM = 18$ cm.
 and $XY = 20$ cm.,
 then $NL = \dots\dots\dots$ cm.,
 $NY = \dots\dots\dots$ cm. and the perimeter of
 $\triangle NLY = \dots\dots\dots$ cm.

4 In the opposite figure :

ABC is a triangle in which D is the midpoint of \overline{BC} , E is the midpoint of \overline{AC} and $\overline{AD} \cap \overline{BE} = \{M\}$

If $AD = 6$ cm. and $AB = BE = 9$ cm.

Calculate : The perimeter of $\triangle MDE$

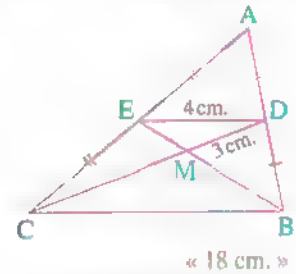

5 In the opposite figure :

If D is the midpoint of \overline{AB} , E is the midpoint of \overline{AC} and $\overline{BE} \cap \overline{DC} = \{M\}$, $DE = 4$ cm.,

$DM = 3$ cm. and $BE = 6$ cm.

Find : The perimeter of $\triangle BMC$

6 In the opposite figure :

ABC is a triangle, X is the midpoint of \overline{AB} ,

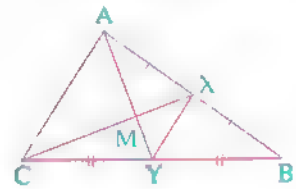

Y is the midpoint of \overline{BC} , $XY = 5$ cm. and $\overline{XC} \cap \overline{AY} = \{M\}$

where $CM = 8$ cm., $YM = 3$ cm. Find :

1 The perimeter of $\triangle MXY$

2 The perimeter of $\triangle MAC$

« 12 cm., 24 cm. »

7 In $\triangle ABC$, $BC = 8$ cm., F and E are the midpoints of \overline{AB} and \overline{AC} respectively and

$\overline{BE} \cap \overline{CF} = \{M\}$ If $BM = 4$ cm. and $CM = 6$ cm. Find : The perimeter of $\triangle MFE$

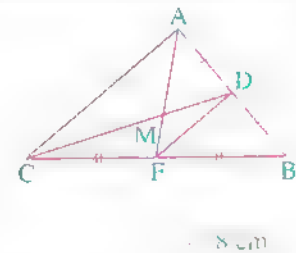

8 In the opposite figure :

\overline{AF} and \overline{CD} are two medians in $\triangle ABC$,

$\overline{AF} \cap \overline{CD} = \{M\}$

If the perimeter of $\triangle AMC = 36$ cm.

Find : The perimeter of $\triangle MFD$

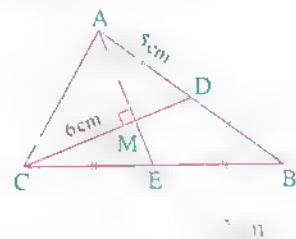

9 In the opposite figure :

M is the point of concurrence of the medians

of $\triangle ABC$, $\overline{AM} \perp \overline{CD}$

, $MC = 6$ cm., $AD = 5$ cm.

Find : The length of \overline{ME}

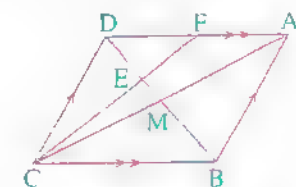

10 In the opposite figure :

ABCD is a parallelogram, its diagonals intersect at M,

$E \in \overline{DM}$ where $DE = 2 EM$, draw \overline{CE} to cut \overline{AD} at F

Prove that : $AF = FD$

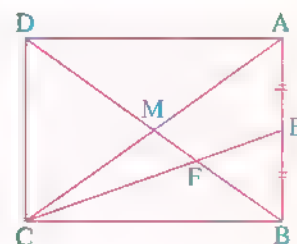

11 In the opposite figure :

ABCD is a rectangle , its diagonals intersect at M ,

E is the midpoint of \overline{AB} , $\overline{CE} \cap \overline{BD} = \{F\}$

1 **Prove that :** F is the intersection point of the medians of the triangle ABC

2 If $BF = 4$ cm. , **find :** the length of \overline{AM}

« 6 cm. »

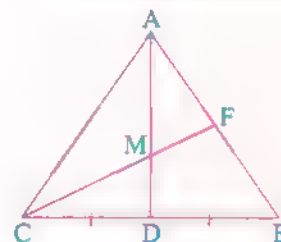

12 In the opposite figure :

ABC is a triangle in which D is the midpoint of \overline{BC} ,

$AB = AC$, $M \in \overline{AD}$ where $AM = \frac{2}{3} AD$ and

$\overline{CM} \cap \overline{AB} = \{F\}$

Prove that : $BF = \frac{1}{2} AC$

13 ABC is a triangle where point D is the midpoint of \overline{BC} and point $M \in \overline{AD}$, $AM = 2 MD$

Draw \overline{CM} to intersect \overline{AB} at point E If $EC = 12$ cm. , **then find :** the length of \overline{EM} « 4 cm. »

14 In the opposite figure :

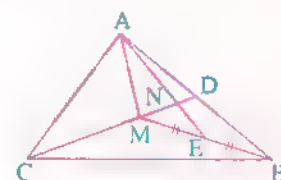

$M \in \overline{CD}$, M is the point of concurrence of the medians

of ΔABC , $N \in \overline{DM}$ where $ND = (x - 1)$ cm.

, $MN = (x + 3)$ cm. , \overline{AN} is drawn to intersect \overline{BM} at E

which is the midpoint of \overline{BM}

Find : The length of \overline{MC}

« 24 cm. »

15 ABCD is a parallelogram whose diagonals intersect at M , E is the midpoint of \overline{BC} ,

\overline{DE} intersects \overline{AC} at F

Prove that : 1 \overline{BF} bisects \overline{CD}

2 $CF = \frac{1}{3} AC$

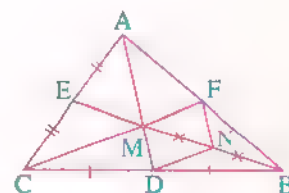

16 In the opposite figure :

\overline{AD} and \overline{BE} are medians in the triangle ABC intersecting at M ,

$\overline{CM} \cap \overline{AB} = \{F\}$, if N is the midpoint of \overline{MB}

Prove that : The figure FNDM is a parallelogram.

17 In the opposite figure :

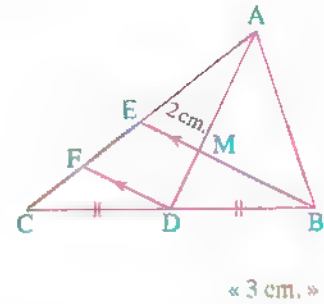

ABC is a triangle in which D is the midpoint of \overline{BC}

, $M \in \overline{AD}$ where $AM = 2 MD$

, $\overline{BM} \cap \overline{AC} = \{E\}$

, $ME = 2$ cm. , draw $\overline{DF} \parallel \overline{BE}$ and cut \overline{AC} at F

Find : The length of \overline{DF}

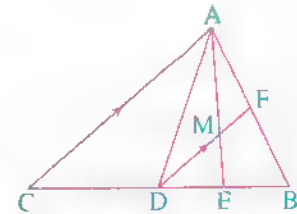

18 In the opposite figure :

ABC is a triangle in which D is the midpoint of \overline{BC}

and E is the midpoint of \overline{BD} , draw $\overline{DF} \parallel \overline{AC}$

and cut \overline{AE} at M and \overline{AB} at F

Prove that : $DM = \frac{1}{3} AC$

19 ABC is a triangle , D is the midpoint of \overline{AB} and E is the midpoint of \overline{AC}

If $\overline{CD} \cap \overline{BE} = \{M\}$ Draw \overline{AM} to intersect \overline{BC} at F

Prove that : The figure DBFE is a parallelogram.

Problem Solving

1 Complete the following :

- 1 The number of medians in the right-angled triangle is
- 2 The length of the median from the vertex of the right angle in the right-angled triangle equals
- 3 If the length of the median drawn from a vertex of a triangle equals half the length of the opposite side to this vertex , then the angle at this vertex is
- 4 The length of the side opposite to the angle of measure 30° in the right-angled triangle equals
- 5 The length of the hypotenuse in thirty and sixty triangle equals the length of the side opposite to the angle whose measure is 30°
- 6 The length of the hypotenuse in the right-angled triangle equals the length of the median drawn from the vertex of the right angle.

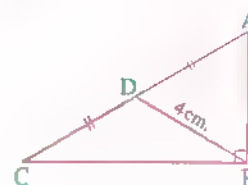

2 Using data given for each of the following figures , find the required below each figure :

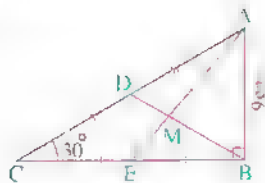

AC = cm.

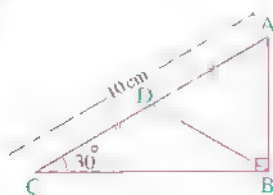

XZ = cm.

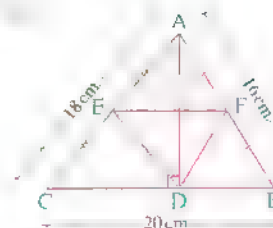

AC = cm.

AC = cm. ,
 BD = cm. ,
 MD = BD
 and MD = cm.

BD = cm. ,
 AB = cm.
 and the perimeter of
 $\triangle ABD$ = cm.

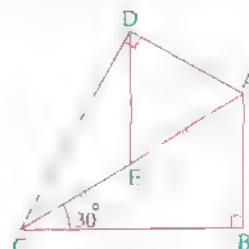

DF = cm. ,
 DE = cm. ,
 FE = cm.
 and the perimeter of
 $\triangle DEF$ = cm.

3 Choose the correct answer from those given :

- In the right-angled triangle , the ratio between the length of the median drawn from the vertex of the right angle and the length of the hypotenuse is
 (a) 2 : 1 (b) 1 : 2 (c) 2 : 3 (d) 3 : 2
- In the thirty-sixty triangle , the ratio between the length of the hypotenuse and the length of the side opposite to the angle of measure 30° is
 (a) 1 : 2 (b) 2 : 1 (c) 1 : 1 (d) 1 : 3
- In the thirty-sixty triangle , the ratio between the length of the median drawn from the vertex of the right angle and the length of the side opposite to the angle of measure 30° is
 (a) 1 : 2 (b) 2 : 1 (c) 1 : 1 (d) 2 : 3
- ABC is a right-angled triangle at B , D is the midpoint of \overline{AC} , then $BD = \dots$
 (a) $\frac{1}{2} AC$ (b) AC (c) $\frac{1}{2} BC$ (d) AB
- ABC is a triangle in which $m(\angle A) = 90^\circ$, $AC = \frac{1}{2} BC$, then $m(\angle C) = \dots$
 (a) 30° (b) 60° (c) 90° (d) 120°
- In $\triangle ABC$, $m(\angle B) = 90^\circ$, if $2 AB - AC = 0$, then $m(\angle C) = \dots$
 (a) 30° (b) 60° (c) 90° (d) 120°

In the opposite figure :

$m(\angle ABC) = m(\angle ADC) = 90^\circ$,
 $m(\angle ACB) = 30^\circ$ and
 E is the midpoint of \overline{AC}
Prove that : $AB = DE$

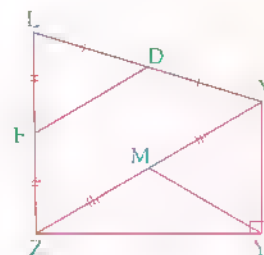

5 In the opposite figure :

$m(\angle XYZ) = 90^\circ$, D is the midpoint of \overline{XL} ,

E is the midpoint of \overline{ZL} and

M is the midpoint of \overline{XZ}

Prove that : $DE = YM$

6 In the opposite figure :

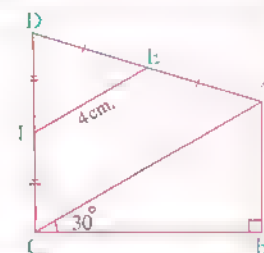

ABCD is a quadrilateral in which $m(\angle B) = 90^\circ$,

E is the midpoint of \overline{AD} , F is the midpoint of \overline{CD} ,

$m(\angle ACB) = 30^\circ$ and $EF = 4$ cm.

Find by proof : The length of \overline{AB}

« 4 cm. »

7 In the opposite figure :

$m(\angle BAC) = m(\angle CBE) = 90^\circ$

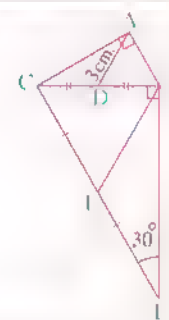

, $m(\angle BEC) = 30^\circ$

, D and F are the midpoints

of \overline{BC} and \overline{CE} respectively and $AD = 3$ cm.

Find : The length of \overline{BF}

« 6 cm. »

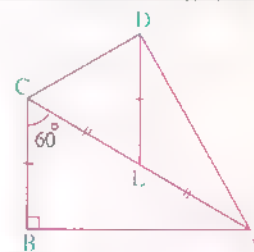

8 In the opposite figure :

ABC is a right-angled triangle at B, $m(\angle ACB) = 60^\circ$,

E is the midpoint of \overline{AC} and

$DE = BC$

Prove that : $m(\angle ADC) = 90^\circ$

9 In the opposite figure :

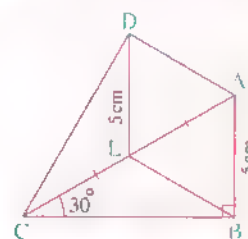

ABC is a right-angled triangle at B,

$m(\angle ACB) = 30^\circ$, $AB = 5$ cm. and

E is the midpoint of \overline{AC}

If $DE = 5$ cm.,

prove that : $m(\angle ADC) = 90^\circ$

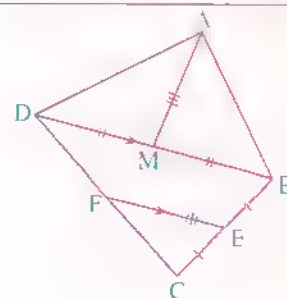

10 In the opposite figure :

ABD is a triangle, M is the midpoint of \overline{BD} ,

E is the midpoint of \overline{BC} ,

$F \in \overline{CD}$, $\overline{EF} \parallel \overline{BD}$ and $AM = EF$

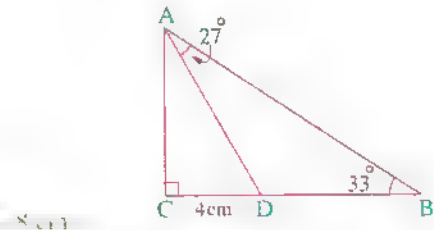

Prove that : $m(\angle BAD) = 90^\circ$

11 In the opposite figure :

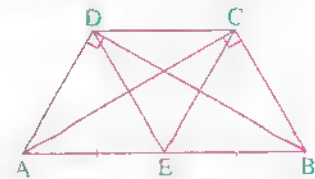

ABC is a triangle in which $m(\angle B) = 33^\circ$
 $m(\angle C) = 90^\circ$, $D \in \overline{BC}$ where $CD = 4$ cm.
 $m(\angle BAD) = 27^\circ$

Find : The length of \overline{AD}

12 In the opposite figure :

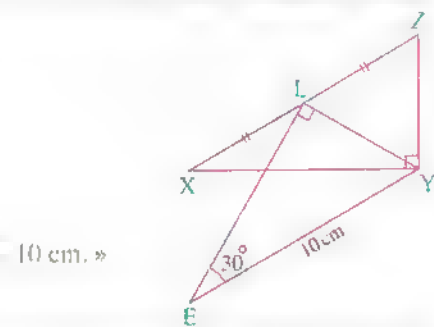

ADB is a right-angled triangle at D ,
 ACB is a right-angled triangle at C and E is the midpoint of \overline{AB}
Prove that : $\triangle CED$ is an isosceles triangle.

13 In the opposite figure :

$m(\angle YLE) = 90^\circ$, $m(\angle E) = 30^\circ$, $YE = 10$ cm. ,
 $m(\angle XYZ) = 90^\circ$ and
 L is the midpoint of \overline{XZ}

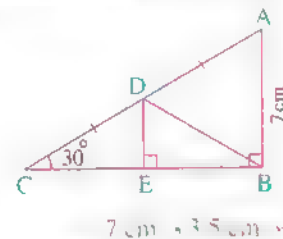

Find by proof : The length of \overline{XZ}

14 In the opposite figure :

ABC is a right-angled triangle at B , D is the midpoint
 of \overline{AC} , $\overline{DE} \perp \overline{BC}$, $AB = 7$ cm. and $m(\angle C) = 30^\circ$

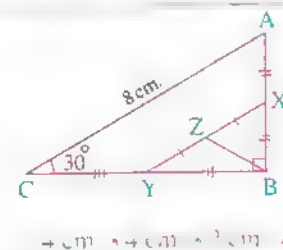

Find the length of each of : \overline{BD} and \overline{DE}

15 In the opposite figure :

ABC is a triangle in which $m(\angle ABC) = 90^\circ$, $m(\angle C) = 30^\circ$,
 X , Y and Z are the midpoints of \overline{AB} , \overline{BC} and \overline{XY}
 respectively and $AC = 8$ cm.

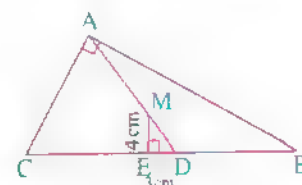

Find the length of each of : \overline{AB} , \overline{XY} and \overline{BZ}

16 In the opposite figure :

ABC is a right-angled triangle at A
 M is the point of concurrence of its medians
 $E \in \overline{DC}$ where $\overline{ME} \perp \overline{DC}$, $DE = 3$ cm.
 and $ME = 4$ cm.

Find : The length of \overline{BC}

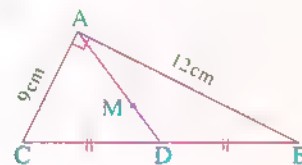

17 In the opposite figure :

$m(\angle BAC) = 90^\circ$, $AB = 12$ cm., $AC = 9$ cm.

\overline{AD} is a median of $\triangle ABC$ and M is the point of concurrence of the medians of $\triangle ABC$

Find : The length of \overline{AM}

« 5 cm. »

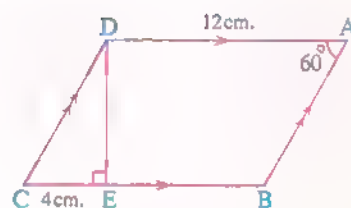

18 In the opposite figure :

ABCD is a parallelogram in which

$m(\angle A) = 60^\circ$, $\overline{DE} \perp \overline{BC}$

, $AD = 12$ cm. and $EC = 4$ cm.

Find : The perimeter of the parallelogram ABCD

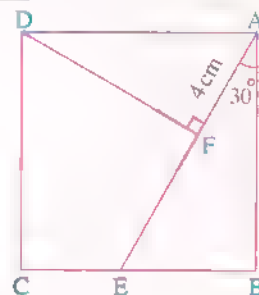

« 40 cm. »

19 In the opposite figure :

ABCD is a square, $E \in \overline{BC}$ where $m(\angle BAE) = 30^\circ$ and

$\overline{DF} \perp \overline{AE}$ If $AF = 4$ cm.

Calculate : The area of the square ABCD

« 64 cm². »

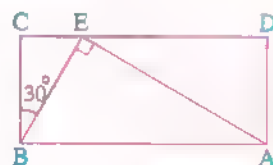

20 In the opposite figure :

ABCD is a rectangle, $E \in \overline{DC}$

where $m(\angle CBE) = 30^\circ$

and $m(\angle AEB) = 90^\circ$

Prove that : $CE = \frac{1}{4} AB$

21 In the opposite figure :

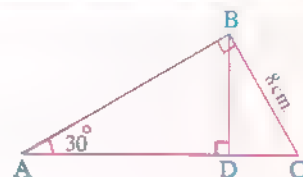

ABC is a right-angled triangle at B ,

$m(\angle A) = 30^\circ$,

$D \in \overline{AC}$ such that $\overline{BD} \perp \overline{AC}$

If $BC = 8$ cm.

Find : The length of \overline{AD}

« 12 cm. »

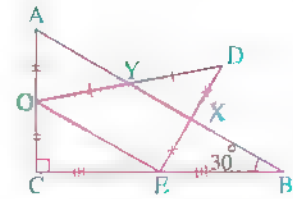

22 In the opposite figure :

ABC is a right-angled triangle at C in which $m(\angle B) = 30^\circ$

, E, O, X, Y are the midpoints of \overline{BC} , \overline{AC}

, \overline{DE} , \overline{DO} respectively

Prove that : $XY = \frac{1}{2} AC$

23 ABC is a triangle in which $AB = AC$ and \overline{AD} is drawn to be perpendicular to \overline{BC} where $\overline{AD} \cap \overline{BC} = \{D\}$ If E and F are the two midpoints of \overline{AB} and \overline{AC} respectively, prove that : $DE + DF = AB$

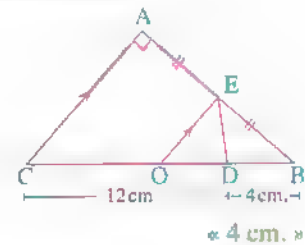

24 In the opposite figure :

ABC is a right-angled triangle at A

, E is the midpoint of \overline{AB} , $O \in \overline{BC}$

where $\overline{EO} \parallel \overline{AC}$, $D \in \overline{BO}$ where $BD = 4 \text{ cm.}$, $DC = 12 \text{ cm.}$

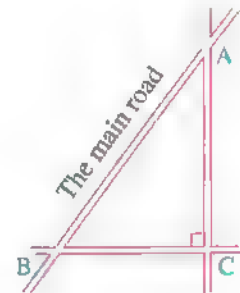

Find : The length of \overline{DE}

Life Application

25 The opposite figure is a sketch for three towns A, B and C such that the distance between the towns A and C is 40 km. and the distance between the towns B and C is 30 km.

If we want to build a service station lying on the main road at the half-way between the towns A and B, also we want to build a road linking this station to the town C, then how long will this road be ?

For excellent pupils

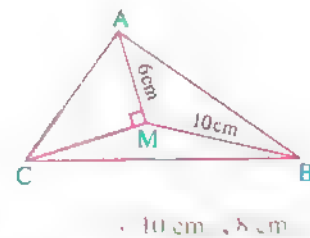

26 In the opposite figure :

M is the point of concurrence of the medians of $\triangle ABC$

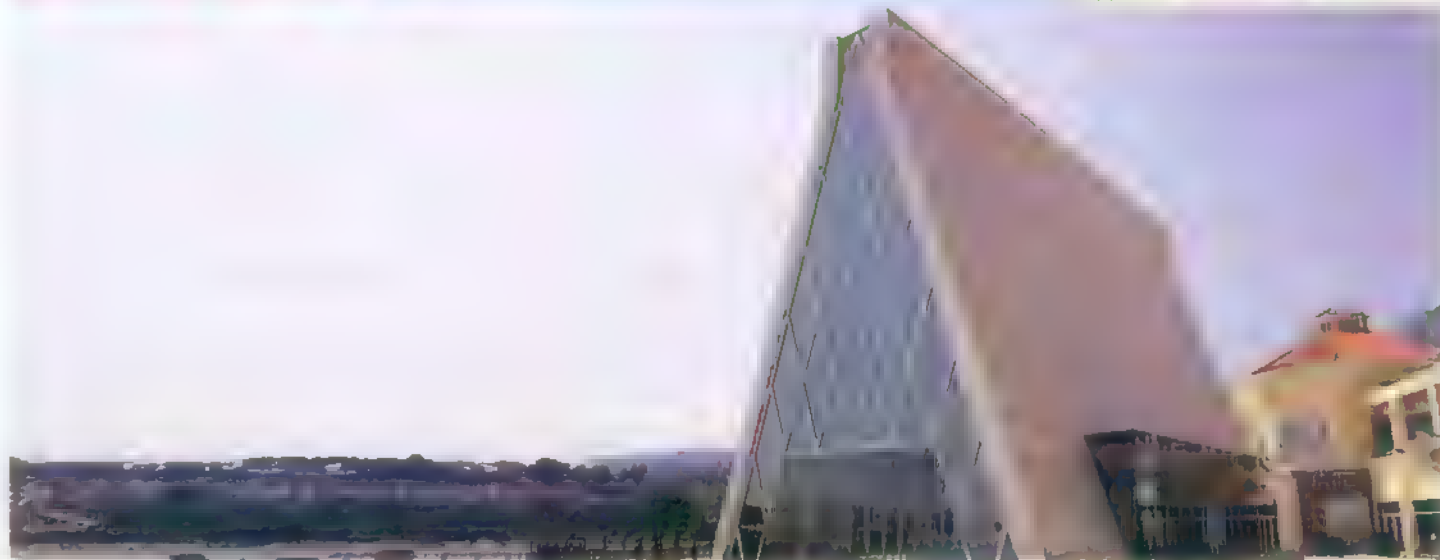

, $AM = 6 \text{ cm.}$, $BM = 10 \text{ cm.}$

, $m(\angle AMC) = 90^\circ$

Find by proof : 1 The length of \overline{AC} 2 The length of \overline{MC}

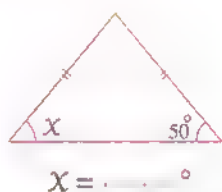

27 ABCD is a parallelogram, X is an interior point in it such that \overline{DX} bisects $\angle ADC$, \overline{CX} bisects $\angle DCB$, if the point Y is the midpoint of \overline{DC} , prove that : $XY = YC$

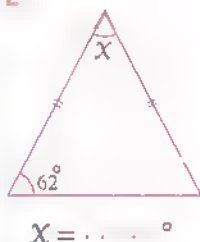

● Remember ● Understand ● Apply ● Problem Solving

1 In each of the following, find the value of the symbol used for the measure of the angle :

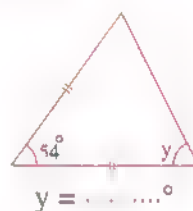

1

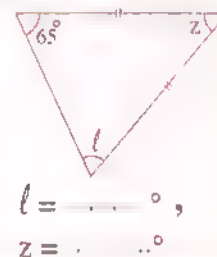

2

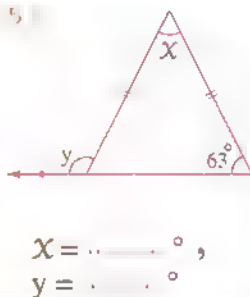

3

4

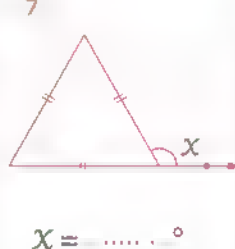

5

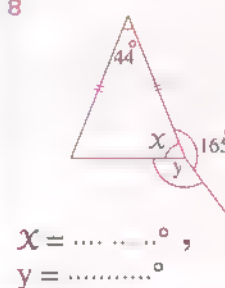

6

7

8

2 Complete the following :

- 1 The base angles of the isosceles triangle are
- 2 The measure of each angle in the equilateral triangle equals ...°
- 3 In $\triangle DEF$, if $DE = DF$, then $m(\angle E) = m(\angle \dots)$
- 4 In the isosceles triangle, if the measure of one of the two base angles is 65° , then the measure of its vertex angle equals

- In the isosceles triangle, if the measure of the vertex angle equals 40° , then the measure of one of the two base angles equals $^\circ$
- An isosceles triangle, the measure of its vertex angle is 80° , if the measure of one of its base angles is $(X + 30^\circ)$, then $X = \dots\dots\dots$

3 Choose the correct answer from those given :

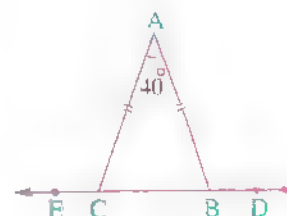

- 1 In $\triangle XYZ$, if $XY = YZ = XZ$, then $m(\angle X) = \dots\dots\dots$
 (a) 30° (b) 60° (c) 90° (d) 180°
- 2 The measure of the exterior angle of the equilateral triangle equals
 (a) 60° (b) 90° (c) 120° (d) 180°
- 3 LMN is a triangle in which $LM = MN$, $m(\angle M) = 70^\circ$, $m(\angle N) = \dots\dots\dots$
 (a) 20° (b) 35° (c) 55° (d) 70°
- 4 In $\triangle ABC$, $AB = AC$, $m(\angle C) = 65^\circ$, then $m(\angle A) = \dots\dots\dots$
 (a) 30° (b) 50° (c) 55° (d) 130°
- 5 In $\triangle XYZ$, $ZY = ZX$, $m(\angle Z) = 120^\circ$, then $m(\angle X) = \dots\dots\dots$
 (a) 30° (b) 60° (c) 90° (d) 120°
- 6 If $\triangle ABC$ is right-angled at A and $AB = AC$, then $m(\angle B) = \dots\dots\dots$
 (a) 30° (b) 45° (c) 60° (d) 90°
- 7 XYZ is an isosceles triangle in which, $m(\angle Y) = 100^\circ$, then $m(\angle Z) = \dots\dots\dots$
 (a) 100° (b) 80° (c) 50° (d) 40°
- 8 If the measure of one of the two base angles in the isosceles triangle is 30° , then the triangle is
 (a) obtuse-angled. (b) acute-angled.
 (c) right-angled. (d) equilateral.
- 9 In $\triangle ABC$, $AB = AC$, $m(\angle B) = 6X^\circ$, $m(\angle A) = 3X^\circ$, then $X = \dots\dots\dots$
 (a) 30° (b) 12° (c) 60° (d) 90°
- 10 In $\triangle XYZ$, if $XY = XZ$, then the exterior angle at the vertex Z is
 (a) acute. (b) obtuse. (c) right. (d) reflex.

4 In the opposite figure :

ABC is an isosceles triangle in which $AB = AC$,
 $m(\angle A) = 40^\circ$ and $D \in \overrightarrow{CB}$, $E \in \overrightarrow{BC}$

1 Find : $m(\angle ABC)$

2 Prove that : $\angle ABD \cong \angle ACE$

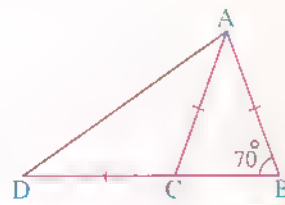

5 In the opposite figure :

$AB = AC = CD$

and $m(\angle B) = 70^\circ$

Find by proof :

$m(\angle BAD)$

6 In the opposite figure :

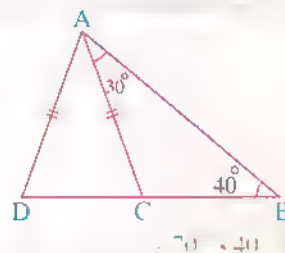

$m(\angle B) = 40^\circ$, $m(\angle BAC) = 30^\circ$

and $AC = AD$

Find by proof :

1) $m(\angle D)$

2) $m(\angle CAD)$

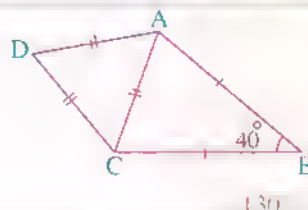

7 In the opposite figure :

$AD = DC = AC$, $AB = BC$

and $m(\angle ABC) = 40^\circ$

Find : $m(\angle BAD)$

8 In the opposite figure :

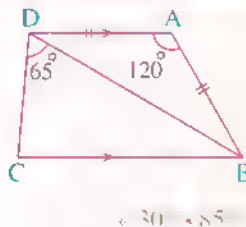

$AB = AD$, $\overline{AD} \parallel \overline{BC}$,

$m(\angle BAD) = 120^\circ$ and $m(\angle BDC) = 65^\circ$

Find :

1) $m(\angle ADB)$

2) $m(\angle C)$

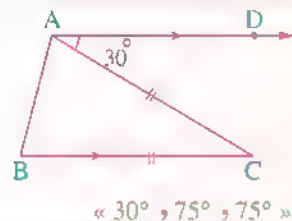

9 In the opposite figure :

ABC is a triangle in which $AC = BC$,

$\overline{AD} \parallel \overline{BC}$ and $m(\angle DAC) = 30^\circ$

Find : The measures of the angles of $\triangle ABC$

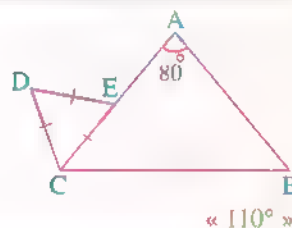

10 In the opposite figure :

$AB = AC$, $m(\angle BAC) = 80^\circ$

and $CE = ED = CD$

Find by proof : $m(\angle BCD)$

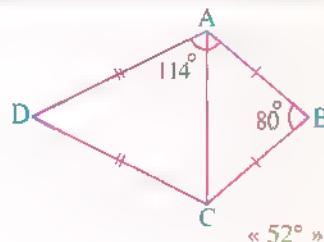

11 In the opposite figure :

$AB = BC$, $AD = CD$, $m(\angle BAD) = 114^\circ$

and $m(\angle B) = 80^\circ$

Find : $m(\angle ADC)$

Exercise 3

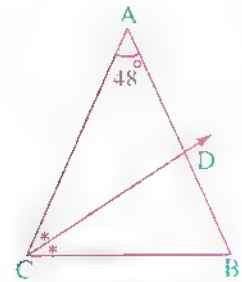

12 In the opposite figure :

$AB = AC$, $m(\angle BAC) = 48^\circ$, \overrightarrow{CD} bisects $\angle BCA$
and intersects \overline{AB} at D

Find :

1 $m(\angle B)$

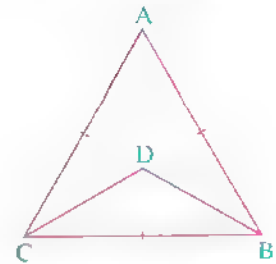

2 $m(\angle BCD)$

13 In the opposite figure :

ABC is an equilateral triangle and the two bisectors of $\angle B$ and $\angle C$ intersect together at D

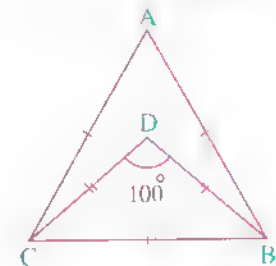

Find : $m(\angle BDC)$

14 In the opposite figure :

ABC is an equilateral triangle , $DB = DC$
and $m(\angle BDC) = 100^\circ$

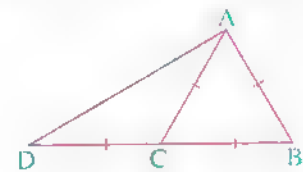

Find by proof : $m(\angle ABD)$

15 In the opposite figure :

ABC is an equilateral triangle.
 $D \in \overline{BC}$ such that $BC = CD$

Prove that : $\overline{BA} \perp \overline{AD}$

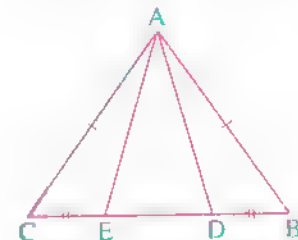

16 In the opposite figure :

ABC is an isosceles triangle in which $AB = AC$, $D \in \overline{BC}$
and $E \in \overline{BC}$, such that $BD = EC$

Prove that : 1 $\triangle ADE$ is an isosceles triangle.

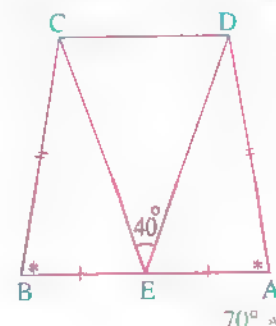

2 $\angle AED \equiv \angle ADE$

17 In the opposite figure :

E is the midpoint of \overline{AB} , $AD = BC$, $m(\angle A) = m(\angle B)$
and $m(\angle DEC) = 40^\circ$

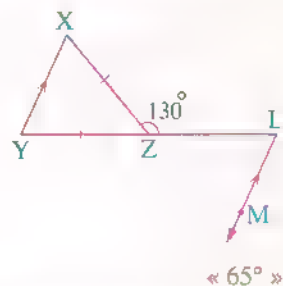

Find : $m(\angle EDC)$

18 In the opposite figure :

$Z \in \overline{LY}$, $XZ = YZ$, $m(\angle LZX) = 130^\circ$
and $\overline{LM} \parallel \overline{XY}$

Find : $m(\angle MLY)$

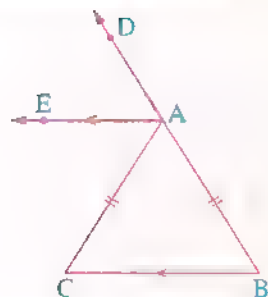

19 In the opposite figure :

$A \in \overline{BD}$, $AB = AC$ and $\overline{AE} \parallel \overline{BC}$

Prove that :

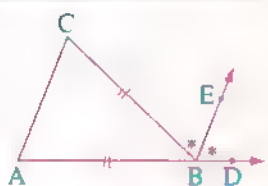

\overline{AE} bisects $\angle DAC$

20 In the opposite figure :

$AB = BC$ and \overline{BE} bisects $\angle CBD$

Prove that : $\overline{BE} \parallel \overline{AC}$

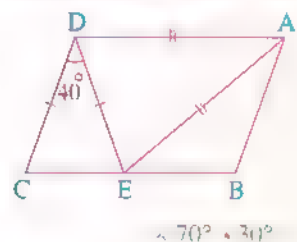

21 In the opposite figure :

ABCD is a parallelogram, $E \in \overline{BC}$,
where $AE = AD$, $DE = DC$ and $m(\angle EDC) = 40^\circ$

Find : 1 $m(\angle AED)$

2 $m(\angle BAE)$

22 In the opposite figure :

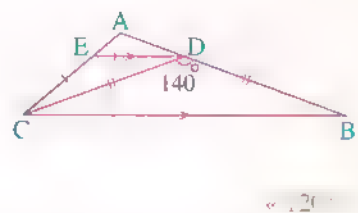

ABC is a triangle in which

$D \in \overline{AB}$, $E \in \overline{AC}$

where $\overline{DE} \parallel \overline{BC}$, $DE = EC$

, $DB = DC$ and $m(\angle BDC) = 140^\circ$

Find : $m(\angle A)$

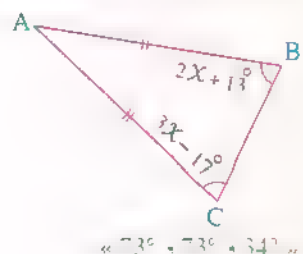

23 In the opposite figure :

$AB = AC$, $m(\angle B) = 2x + 13^\circ$

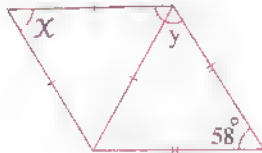

and $m(\angle C) = 3x - 17^\circ$

Find : The measures of the angles of $\triangle ABC$

In each of the following figures, find the value of the symbol used for the measure of the angle :

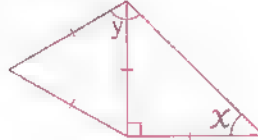

1

$$x = \dots^\circ,$$

$$y = \dots^\circ$$

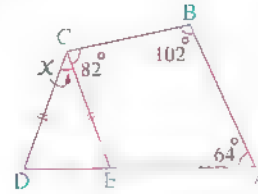

2

$$x = \dots^\circ,$$

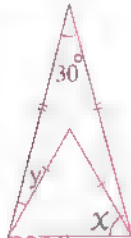

$$y = \dots^\circ$$

3

$$x = \dots^\circ$$

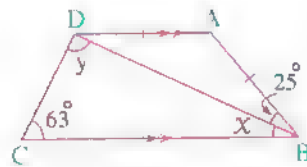

4

$$x = \dots^\circ,$$

$$y = \dots^\circ$$

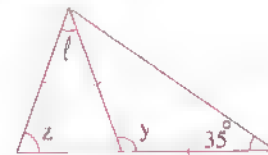

5

$$x = \dots^\circ,$$

$$y = \dots^\circ$$

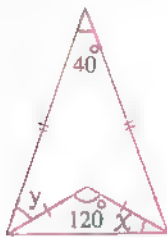

6

$$y = \dots^\circ, l = \dots^\circ,$$

$$z = \dots^\circ$$

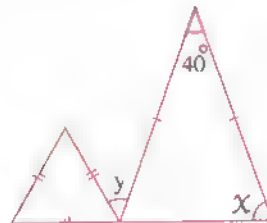

7

$$x = \dots^\circ,$$

$$y = \dots^\circ$$

8

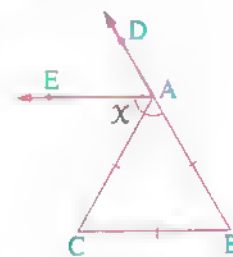

$$x = \dots^\circ,$$

$$y = \dots^\circ$$

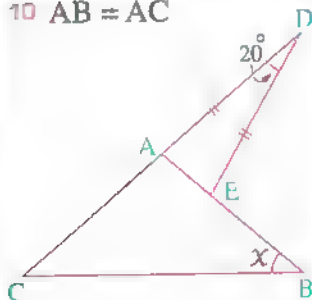

9

\overline{AE} bisects $\angle CAD$

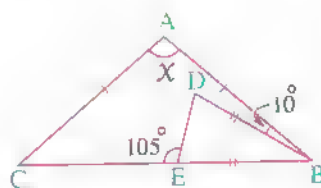

$$x = \dots^\circ$$

10 $AB = AC$

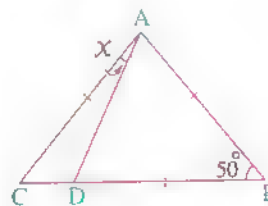

$$x = \dots^\circ$$

11

$$x = \dots^\circ$$

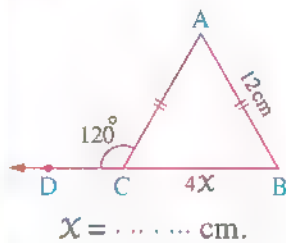

12

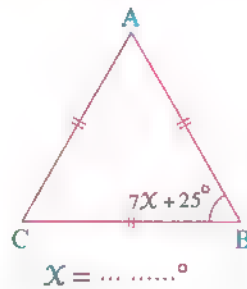

$$x = \dots^\circ$$

25 Find the value of X in each of the following figures :

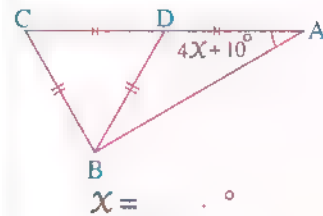

1

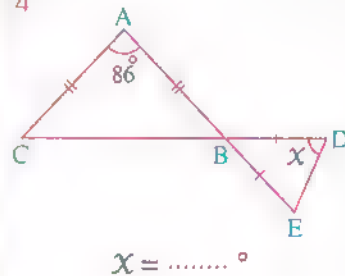

2

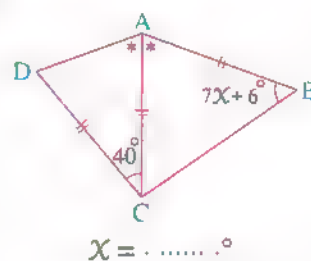

3

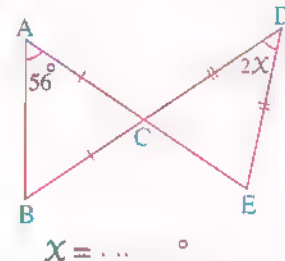

4

5

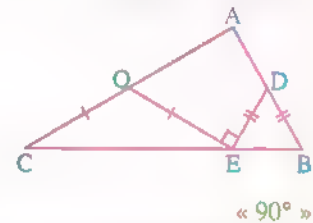

6

26 In the opposite figure :

ABC is a triangle in which $D \in \overline{AB}$, $E \in \overline{BC}$, $O \in \overline{AC}$
where $m(\angle DEO) = 90^\circ$, $DB = DE$ and $OE = OC$

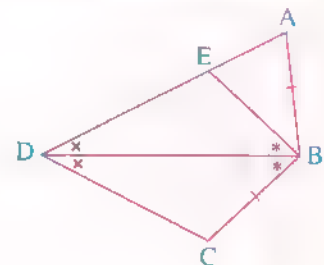

Find : $m(\angle A)$

27 In the opposite figure :

$BA = BC$, $E \in \overline{AD}$
and \overleftrightarrow{BD} bisects each
of $\angle CBE$ and $\angle CDE$

Prove that : $m(\angle A) + m(\angle C) = 180^\circ$

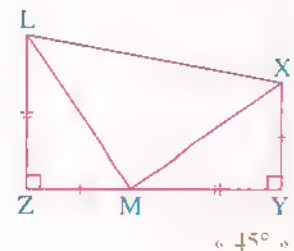

For excellent pupils

28 In the opposite figure :

$m(\angle Y) = m(\angle Z) = 90^\circ$
, $XY = MZ$ and $YM = ZL$

Find by proof : $m(\angle MXL)$

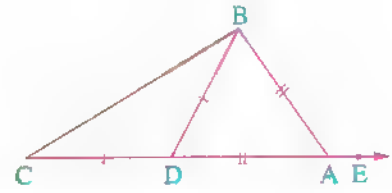

29 In the opposite figure :

ABC is a triangle , $D \in \overline{AC}$ such that $BD = DC$

$AD = AB$ and $E \in \overline{CA}$

Prove that : $m(\angle BAE) = 4 m(\angle BCD)$

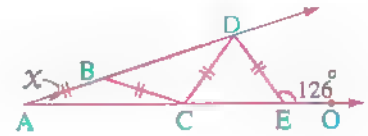

30 In the opposite figure :

$m(\angle A) = x^\circ$, $AB = BC = CD = DE$

and $m(\angle DEO) = 126^\circ$

Find : The value of x

$\ll 18^\circ \gg$

Wonders of numbers

Problem Solving

1. In each of the following figures, write the equal sides in length :

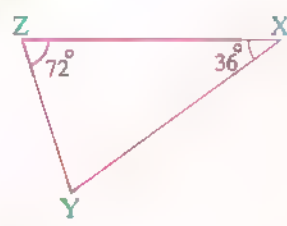

1

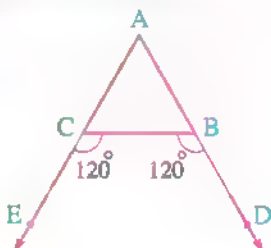

2

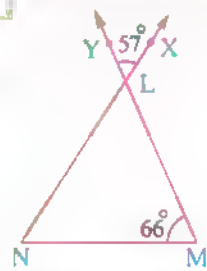

3

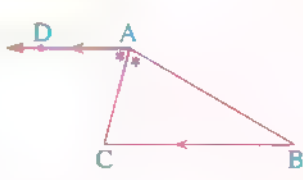

4

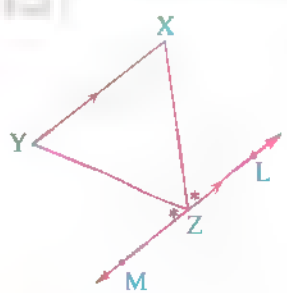

5

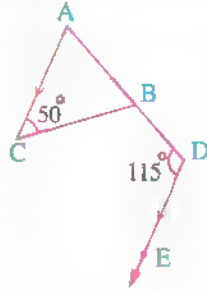

6

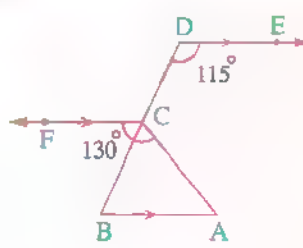

7

8

9

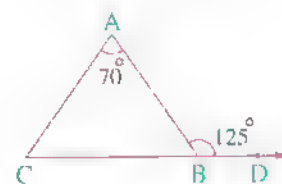

2 Complete the following :

- If two angles in the triangle are congruent , then the two sides opposite to these two angles are and the triangle is
- 2 If the three angles in the triangle are congruent , then the triangle is
- 3 In $\triangle ABC$, if $m(\angle A) = 50^\circ$ and $m(\angle B) = 80^\circ$, then the triangle is
- 4 If the measure of one angle in the right-angled triangle is 45° , then the triangle is
- 5 If the measure of one angle of an isosceles triangle is 60° , then the triangle is
- 6 ABC is a triangle in which $AB = AC$ and $m(\angle A) = 60^\circ$
If its perimeter = 18 cm. , then $BC =$ cm.
- 7 In $\triangle ABC$, $CA = CB$, $m(\angle C) = m(\angle A)$, then $m(\angle B) =$ °

3 In the opposite figure :

$D \in \overline{CB}$, $m(\angle ABD) = 125^\circ$
and $m(\angle A) = 70^\circ$

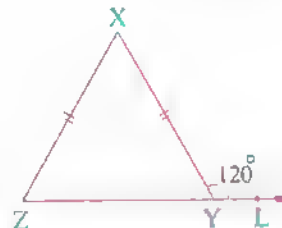

Prove that : $\triangle ABC$ is an isosceles triangle.

4 In the opposite figure :

$XY = XZ$, $m(\angle XYL) = 120^\circ$
and $L \in \overline{ZY}$

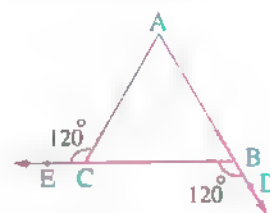

Prove that : $\triangle XYZ$ is an equilateral triangle.

5 In the opposite figure :

$D \in \overline{AB}$, $E \in \overline{BC}$ and
 $m(\angle CBD) = m(\angle ACE) = 120^\circ$

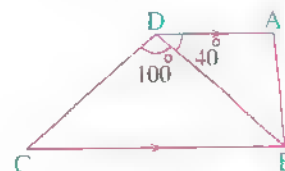

Prove that : $\triangle ABC$ is an equilateral triangle.

6 In the opposite figure :

$\overline{AD} \parallel \overline{BC}$, $m(\angle ADB) = 40^\circ$
and $m(\angle BDC) = 100^\circ$

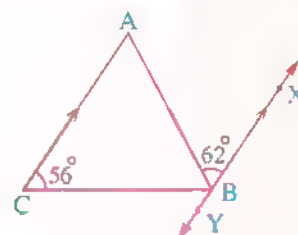

Prove that : $\triangle DBC$ is an isosceles triangle.

7 In the opposite figure :

$B \in \overleftrightarrow{XY}$, $\overleftrightarrow{XY} \parallel \overline{AC}$
 $m(\angle ABX) = 62^\circ$ and
 $m(\angle C) = 56^\circ$

Prove that : $AC = BC$

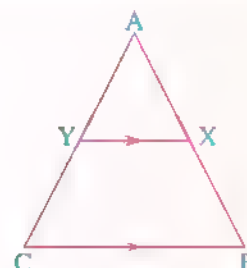

8 In the opposite figure :

ABC is a triangle in which $AB = AC$, $X \in \overline{AB}$,
 $Y \in \overline{AC}$ and $\overleftrightarrow{XY} \parallel \overline{BC}$

Prove that : 1. $\triangle AXY$ is an isosceles triangle.

2. $XB = YC$

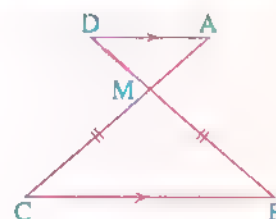

9 ABC is a triangle in which $D \in \overline{AB}$ and $E \in \overline{BC}$ such that $BD = BE$

So if $\overleftrightarrow{DE} \parallel \overline{AC}$, **prove that :** $AB = BC$

10 In the opposite figure :

$\overline{AC} \cap \overline{BD} = \{M\}$,
 $MB = MC$ and $\overline{AD} \parallel \overline{BC}$

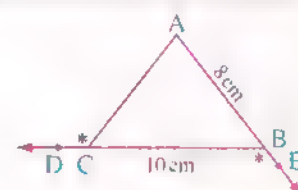

Prove that : $MA = MD$

11 In the opposite figure :

$B \in \overline{AE}$, $C \in \overline{BD}$, $AB = 8$ cm.,
 $BC = 10$ cm. and $m(\angle EBC) = m(\angle ACD)$

Find : The perimeter of $\triangle ABC$

« 26 cm. »

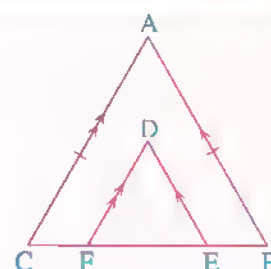

12 In the opposite figure :

$AB = AC$, $\overleftrightarrow{DE} \parallel \overline{AB}$ and $\overleftrightarrow{DF} \parallel \overline{AC}$

Prove that :

1. $DE = DF$

2. $m(\angle BAC) = m(\angle EDF)$

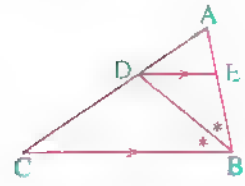

13 In the opposite figure :

ABC is a triangle

, \overline{BD} bisects $\angle ABC$ and $\overline{ED} \parallel \overline{BC}$ where $E \in \overline{AB}$

Prove that : $\triangle EBD$ is an isosceles triangle.

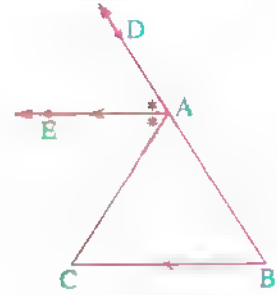

14 In the opposite figure :

$A \in \overline{BD}$, $\overline{AE} \parallel \overline{BC}$

and \overline{AE} bisects $\angle CAD$

Prove that : $AB = AC$

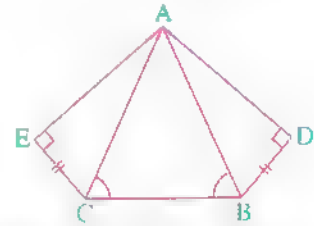

15 In the opposite figure :

$BD = CE$, $m(\angle ABC) = m(\angle ACB)$

and $m(\angle D) = m(\angle E) = 90^\circ$

Prove that : $m(\angle DAB) = m(\angle CAE)$

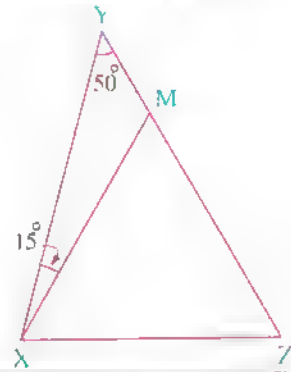

16 In the opposite figure :

YZX is a triangle in which $YZ = YX$

, $m(\angle Y) = 50^\circ$

and $m(\angle YXM) = 15^\circ$

Prove that : $\triangle MZX$ is an isosceles triangle.

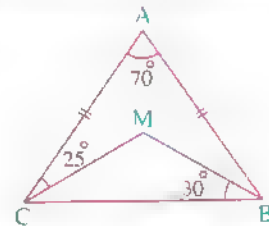

17 In the opposite figure :

ABC is a triangle in which $AB = AC$, $m(\angle A) = 70^\circ$

, $m(\angle MCA) = 25^\circ$ and $m(\angle MBC) = 30^\circ$

Prove that : $\triangle MBC$ is an isosceles triangle.

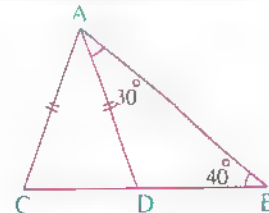

18 In the opposite figure :

$AD = AC$, $m(\angle B) = 40^\circ$

and $m(\angle BAD) = 30^\circ$

Prove that : $AB = CB$

- 19 ABC is a triangle in which $AB = AC$, \overline{BD} bisects $\angle ABC$ and \overline{CD} bisects $\angle ACB$

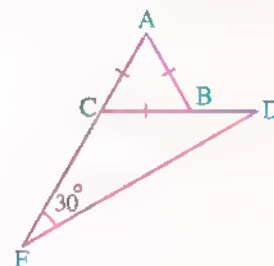

Prove that : $\triangle DBC$ is an isosceles triangle.

- 20 In the opposite figure :

ABC is an equilateral triangle, $F \in \overline{AC}$,

$D \in \overline{CB}$ and $m(\angle DFC) = 30^\circ$

Prove that : $\triangle DCF$ is an isosceles triangle.

- 21 In the opposite figure :

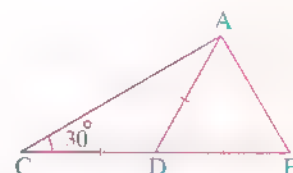

$D \in \overline{BC}$ such that $DA = DB = DC$

and $m(\angle C) = 30^\circ$

Prove that :

1 $\triangle ABD$ is an equilateral triangle.

2 $\triangle ABC$ is a right-angled triangle.

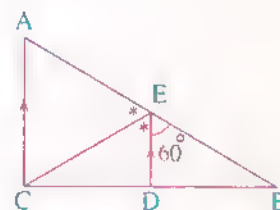

- 22 In the opposite figure :

ABC is a triangle in which $E \in \overline{AB}$,

$\overline{ED} \parallel \overline{AC}$, $m(\angle BED) = 60^\circ$

and \overline{EC} bisects $\angle AED$

Prove that : $\triangle AEC$ is an equilateral triangle.

- 23 In the opposite figure :

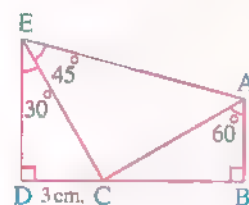

$C \in \overline{BD}$, $m(\angle B) = m(\angle D) = 90^\circ$,

$m(\angle CED) = 30^\circ$

, $m(\angle AEC) = 45^\circ$, $m(\angle BAC) = 60^\circ$

and $CD = 3$ cm.

Find : The length of \overline{AC}

« 6 cm. »

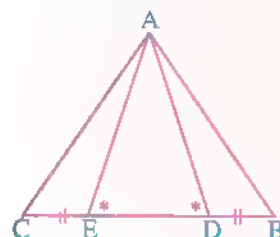

- 24 In the opposite figure :

$\angle ADE \cong \angle AED$

, B, D, E, C are collinear

and $BD = CE$

Prove that : $\triangle ABC$ is an isosceles triangle.

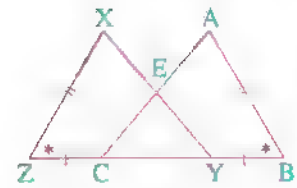

Exercise 4

In the opposite figure :

$Y \in \overline{BZ}$, $C \in \overline{BZ}$, $AB = XZ$,

$BY = CZ$, $\overline{XY} \cap \overline{AC} = \{E\}$ and $m(\angle B) = m(\angle Z)$

Prove that : $\triangle EYC$ is an isosceles triangle.

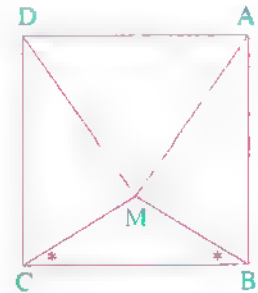

In the opposite figure :

ABCD is a square.

M is a point inside it such that : $m(\angle MBC) = m(\angle MCB)$

Prove that : $\triangle AMD$ is an isosceles triangle.

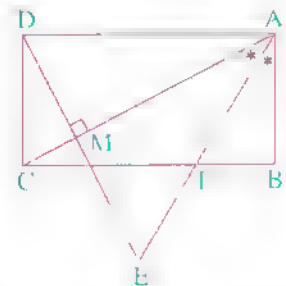

In the opposite figure :

ABCD is a rectangle in which

\overline{AC} is a diagonal, \overline{AE} bisects $\angle BAC$

and $\overline{DE} \perp \overline{AC}$ where $\overline{AE} \cap \overline{DE} = \{E\}$, $\overline{AC} \cap \overline{DE} = \{M\}$

Prove that : $DA = DE$

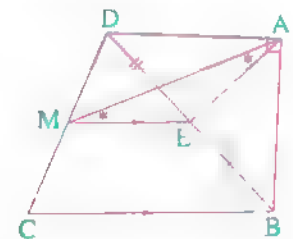

In the opposite figure :

ABCD is a quadrilateral in which

$m(\angle BAD) = 90^\circ$, E is the midpoint of \overline{BD} and $M \in \overline{DC}$

such that $\overline{EM} \parallel \overline{BC}$ and $m(\angle EAM) = m(\angle EMA)$

Prove that : $BD = BC$

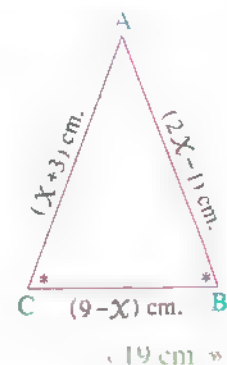

In the opposite figure :

ABC is a triangle in which :

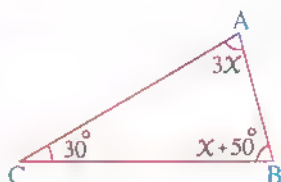

$m(\angle B) = m(\angle C)$

Find : The perimeter of the triangle.

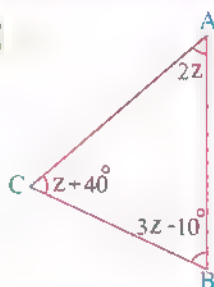

30 In each of the following figures, write the equal sides in length showing the steps of solution :

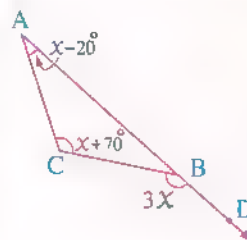

1

2

3

For excellent pupils

31 Choose the correct answer from those given :

- 1 If the sum of measures of two congruent angles in a triangle = $\frac{2}{3}$ the sum of measures of its angles, then the triangle is ..
 (a) right-angled. (b) isosceles. (c) equilateral. (d) scalene.
- 2 ABC is a triangle in which $m(\angle A) = 30^\circ$ and $m(\angle B) : m(\angle C) = 1 : 4$, then ΔABC is
 (a) right-angled. (b) isosceles. (c) equilateral. (d) scalene.

Wonders of numbers

- Pick any positive 2-digit number.
- Interchange the two digits to get a new number.
- Subtract the smaller number from the bigger number.
- Is the difference divisible by 9? 😊

Do the exercise again using different numbers.

● Remember

● Problem Solving

1 Complete the following :

- The straight line drawn from the vertex of the isosceles triangle perpendicular to the base is called
- The number of axes of symmetry in the equilateral triangle equals
- 3 The number of axes of symmetry in the isosceles triangle equals
- 4 The number of axes of symmetry in the scalene triangle equals
- 5 The median of the isosceles triangle drawn from the vertex angle . . .
- 6 The bisector of the vertex angle of the isosceles triangle
- The straight line passing through the vertex angle of the isosceles triangle perpendicular to its base
- 8 The axis of the line segment is
- Any point belonging to the axis of a line segment is from its two terminals.
- In $\triangle ABC$, if $m(\angle A) = m(\angle B) = 60^\circ$, then the number of axes of symmetry of $\triangle ABC$ is
- In $\triangle ABC$, if $m(\angle A) = m(\angle B) \neq 60^\circ$, then the number of axes of symmetry of $\triangle ABC$ is
- In $\triangle ABC$, if $AB = AC$, $m(\angle A) = 60^\circ$, then the number of axes of symmetry of $\triangle ABC$ is . . .

2 In the opposite figure :

If $AB = AC$, $\overline{AD} \perp \overline{BC}$, $BC = 4$ cm. and

$m(\angle DAC) = 35^\circ$, complete the following :

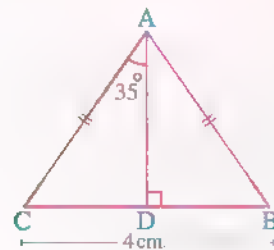

1 $m(\angle BAD) = \dots\dots\dots^\circ$

2 $m(\angle BAC) = \dots\dots\dots^\circ$

3 $m(\angle B) = \dots\dots\dots^\circ$

4 $BD = \dots\dots\dots$ cm.

5 The axis of symmetry of $\triangle ABC$ is

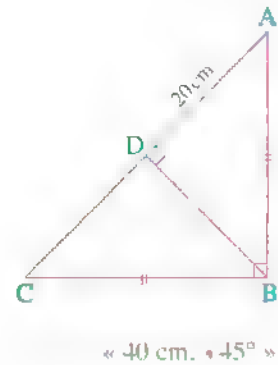

3 Choose the correct answer from those given :

- 1 If $C \in$ the axis of symmetry of \overline{AB} , then $AC - BC = \dots\dots\dots$
 (a) zero (b) 1 (c) 2 (d) 4
- 2 In $\triangle XYZ$, $XY = XZ$, \overline{XE} is a median, if $m(\angle YXE) = 30^\circ$, then $m(\angle YXZ) = \dots\dots\dots$
 (a) 15° (b) 30° (c) 60° (d) 90°
- 3 In $\triangle LMN$, $LM = LN$, $E \in \overline{MN}$ where $\overline{LE} \perp \overline{MN}$, if $ME = 4$ cm., then $MN = \dots\dots\dots$ cm.
 (a) 12 (b) 8 (c) 4 (d) 2
- 4 If the measure of one angle in the right-angled triangle is 45° , then the number of axes of symmetry of the triangle is
- 5 In $\triangle ABC$, $m(\angle A) = 40^\circ$, $m(\angle C) = 100^\circ$, then the number of axes of symmetry of the triangle is
- 6 The triangle in which the measures of two angles in it are 45° , 65° , then the number of axes of symmetry of the triangle is
- 7 An isosceles triangle, the measure of one of its angles is 60° , then the number of its axes of symmetry is
- 8 If $\triangle ABC$ has 1 axis of symmetry, $m(\angle ABC) = 120^\circ$, $m(\angle A) = \dots\dots\dots$
 (a) 30° (b) 60° (c) 90° (d) 120°

4 In the opposite figure :

ABC is a right-angled triangle at B and it is also an isosceles triangle, $\overline{BD} \perp \overline{AC}$ and $AD = 20$ cm. Find the length of \overline{AC} and $m(\angle DBC)$, then deduce that $\triangle BDC$ is an isosceles triangle.

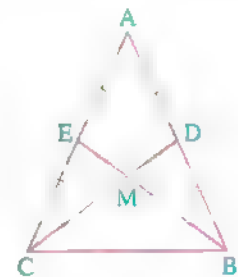

5 In the opposite figure :

$AB = AC$, D and E are the midpoints of \overline{AB} and \overline{AC} respectively and $\overline{BE} \cap \overline{CD} = \{M\}$

Prove that :

- 1 $\overline{AM} \perp \overline{BC}$
- 2 \overline{AM} bisects $\angle BAC$

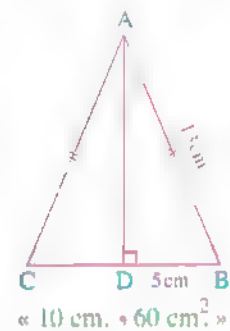

6 In the opposite figure :

In $\triangle ABC$, $AB = AC$, $\overline{AD} \perp \overline{BC}$, $AB = 13$ cm. and $BD = 5$ cm.

Find :

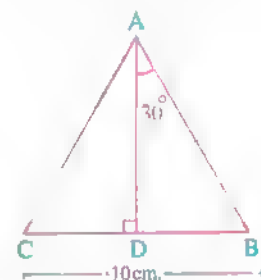

- 1 The length of \overline{BC}
- 2 The area of $\triangle ABC$

7 In the opposite figure :

$AB = AC$, $BC = 10$ cm., $m(\angle BAD) = 30^\circ$ and $\overline{AD} \perp \overline{BC}$

- 1 Find the length of each of : \overline{BD} and \overline{AD}
- 2 How many axes of symmetry are there at $\triangle ABC$?
- 3 Find the area of $\triangle ABC$

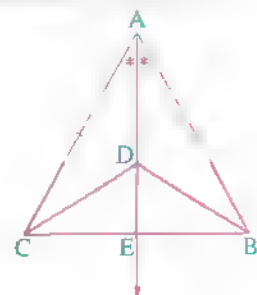

« 5 cm. • 5√3 cm. • 25√3 cm². »

8 In the opposite figure :

ABC is a triangle in which $AB = AC$, \overline{AE} bisects $\angle BAC$, $\overline{AE} \cap \overline{BC} = \{E\}$ and $D \in \overline{AE}$

Prove that :

- 1 $BE = \frac{1}{2} BC$
- 2 $BD = CD$

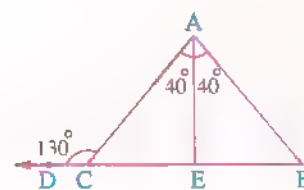

9 In the opposite figure :

$C \in \overline{BD}$, $m(\angle ACD) = 130^\circ$

and $m(\angle BAE) = m(\angle CAE) = 40^\circ$

Prove that :

- 1 $\overline{AE} \perp \overline{BC}$ 2 E is the midpoint of \overline{BC}

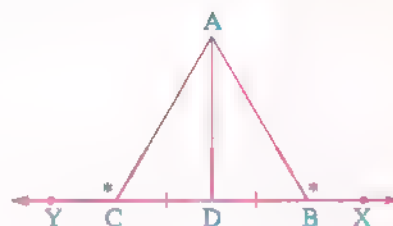

10 In the opposite figure :

X, B, C, D and Y are collinear points,

\overline{AD} is a median of $\triangle ABC$ and

$m(\angle ABX) = m(\angle ACY)$

Prove that : $\overline{AD} \perp \overline{BC}$

11 In the opposite figure :

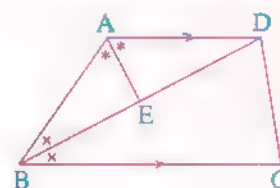

ABCD is a quadrilateral in which

$\overline{AD} \parallel \overline{BC}$, \overline{BD} bisects $\angle ABC$ and

\overline{AE} bisects $\angle BAD$

Prove that :

- 1 $AB = AD$ 2 $\overline{AE} \perp \overline{BD}$ 3 $BE = ED$

12 In the opposite figure :

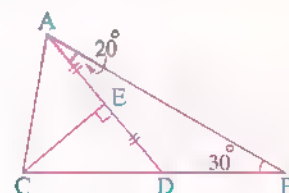

ABC is a triangle in which

$m(\angle B) = 30^\circ$, $D \in \overline{BC}$

where $m(\angle BAD) = 20^\circ$

, E is the midpoint of \overline{AD} and $\overline{CE} \perp \overline{AD}$

Find : $m(\angle ACE)$

« 40° »

13 In the opposite figure :

ABC is a triangle in which

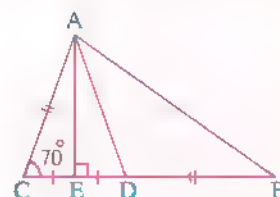

$m(\angle C) = 70^\circ$, $D \in \overline{BC}$

where $BD = AC$

, E is the midpoint of \overline{DC}

and $\overline{AE} \perp \overline{DC}$

Find : $m(\angle B)$

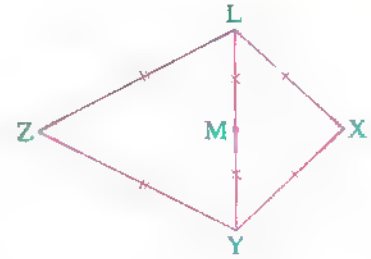

« 35° »

14 In the opposite figure :

$XY = XL$, $ZY = ZL$ and $LM = YM$

Prove that :

X , M and Z are on the same straight line.

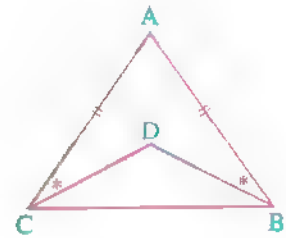

15 In the opposite figure :

ABC is a triangle , D is a point inside it such that

$m(\angle ABD) = m(\angle ACD)$ and $AB = AC$

Prove that : \overleftrightarrow{AD} is the axis of symmetry of \overline{BC}

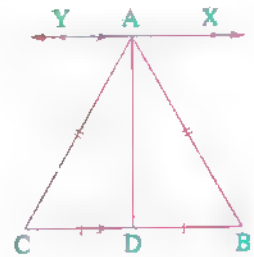

16 In the opposite figure :

ABC is a triangle in which $AB = AC$,

D is the midpoint of \overline{BC} and \overleftrightarrow{XY} passes through the vertex A

such that $\overleftrightarrow{XY} \parallel \overline{BC}$

Prove that : $\overline{AD} \perp \overleftrightarrow{XY}$

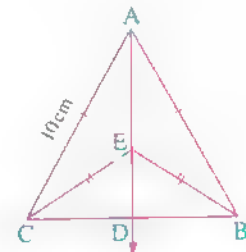

17 In the opposite figure :

$AB = AC = 10$ cm. , $EB = EC$ and $\overline{AE} \cap \overline{BC} = \{D\}$

Prove that : $BD = DC$ and if $BC = 6$ cm.

Find the length of each of : \overline{CD} and \overline{AD}

« 3 cm. , $\sqrt{91}$ cm. »

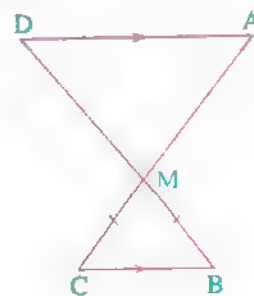

18 In the opposite figure :

$\overline{AC} \cap \overline{BD} = \{M\}$, $\overline{AD} \parallel \overline{BC}$ and $MB = MC$

Prove that :

1 $\triangle AMD$ is an isosceles triangle.

2 The axis of symmetry of $\triangle AMD$ is the same of $\triangle BMC$

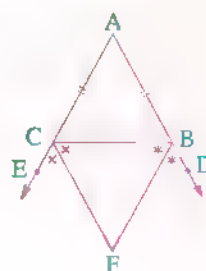

19 In the opposite figure :

$AB = AC$, $D \in \overrightarrow{AB}$, $E \in \overrightarrow{AC}$,

\overrightarrow{BF} bisects $\angle DBC$ and \overrightarrow{CF} bisects $\angle BCE$

Prove that :

- 1 $\triangle BFC$ is an isosceles triangle.
- 2 \overrightarrow{AF} is the axis of symmetry of \overline{BC}

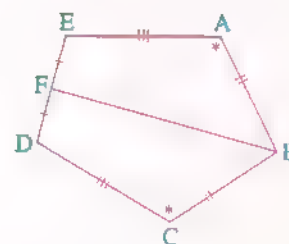

20 In the opposite figure :

$AB = BC$, $AE = CD$,

$m(\angle BAE) = m(\angle BCD)$

and F is the midpoint of \overline{DE}

Prove that : $\overline{BF} \perp \overline{DE}$

21 Choose the correct answer from those given :

If ABCD is a quadrilateral in which $AB = AD$ and $BC = DC$, then \overline{AC} is \overline{BD}

- | | |
|-----------------------------|------------------|
| (a) parallel to | (b) equal to |
| (c) the axis of symmetry of | (d) congruent to |

The triangle whose sides lengths are 2 cm. , $(X + 3)$ cm. and 5 cm. becomes an isosceles triangle when $X = \dots\dots\dots$ cm.

- | | | | |
|-------|-------|-------|-------|
| (a) 1 | (b) 2 | (c) 3 | (d) 4 |
|-------|-------|-------|-------|

If the length of any side in a triangle = $\frac{1}{3}$ of the perimeter of the triangle , then the number of axes of symmetry of the triangle equals

- | | | | |
|-------|-------|-------|----------|
| (a) 1 | (b) 2 | (c) 3 | (d) zero |
|-------|-------|-------|----------|

4 If \overline{XY} is the axis of symmetry of \overline{AB} , then

- | | | | |
|---------------|---------------|---------------|---------------|
| (a) $AX = BY$ | (b) $AX = BX$ | (c) $BY = XY$ | (d) $AY = BX$ |
|---------------|---------------|---------------|---------------|

5 In the rhombus ABCD , the axis of symmetry of \overline{AC} is ...

- | | | | |
|---------------------|---------------------|---------------------|---------------------|
| (a) \overline{BD} | (b) \overline{AB} | (c) \overline{AD} | (d) \overline{CD} |
|---------------------|---------------------|---------------------|---------------------|

6 In the square ABCD , \overline{BD} is the axis of symmetry of

- | | | | |
|---------------------|---------------------|---------------------|---------------------|
| (a) \overline{AB} | (b) \overline{AC} | (c) \overline{AD} | (d) \overline{CD} |
|---------------------|---------------------|---------------------|---------------------|

For excellent pupils

22 In the opposite figure :

ABCD is a quadrilateral in which

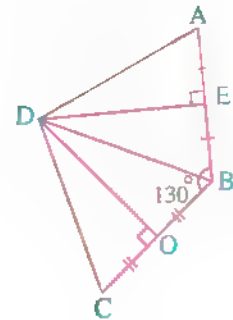

$$m(\angle ABC) = 130^\circ$$

, E is the midpoint of \overline{AB}

, O is the midpoint of \overline{BC}

, $\overline{DE} \perp \overline{AB}$ and $\overline{DO} \perp \overline{BC}$

Find : $m(\angle ADC)$

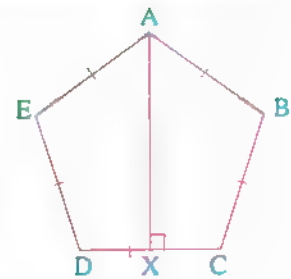

« 100° »

23 In the opposite figure :

ABCDE is a regular pentagon and $\overline{AX} \perp \overline{CD}$

Find : $m(\angle DAX)$

« 18° »

Wonders of numbers

Choose an integer from 1 to 9, multiply it by 9, then multiply the product by 123456789.

Where do you stand ?

A Research Project

On Unit Four

Project Objectives

- Using geometrical instruments to make art designs.
- Using the properties of the equilateral triangle.
- Calculating the area of an equilateral triangle.
- Calculating the area of a square.
- Calculating the area of a geometrical shape consisting of a group of shapes.
- Associating geometry with arts.
- Associating geometry with science.

Do a research project on the following topic

"Geometry is used in many fields of life. One of these is making art designs".

Discuss the following points using available resources :

- 1 Using geometrical instruments, design a logo of a fossil museum which consists of a square. On each side, draw an equilateral triangle.
- 2 Calculate the area of the resulted shape.
- 3 Decorate the logo with colours of your choice and stick a picture of one fossil inside the square.
- 4 Write a short note on the kinds of fossils and how to be formed, and mention an example of each kind.

Exercises of the unit :

6. Inequality.
7. Comparing the measures of angles in a triangle.
8. Comparing the lengths of sides in a triangle.
9. Triangle inequality.

Problem Solving

1 Complete each of the following using $>$ or $<$:

1 In the opposite figure :

If C and B belong to \overline{AD} such that $DC < BA$, then AC DB

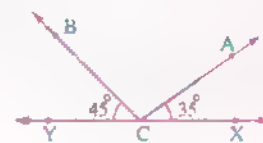

2 In the opposite figure :

If B and C belong to \overline{AD} where $AB > CD$, then AC BD

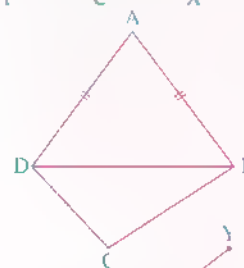

3 In the opposite figure :

If $C \in \overleftrightarrow{XY}$, $m(\angle ACX) = 35^\circ$
and $m(\angle BCY) = 45^\circ$, then $m(\angle XCB)$ $m(\angle ACY)$

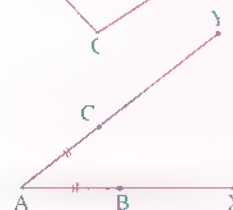

4 In the opposite figure :

$AB = AD$, $m(\angle DBC) < m(\angle CDB)$
 , then $m(\angle ABC)$ $m(\angle ADC)$

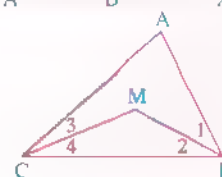

5 In the opposite figure :

If $AB = AC$ and $AY > AX$, then BX CY

6 In the opposite figure :

$m(\angle 1) > m(\angle 3)$, $m(\angle 2) > m(\angle 4)$
 , then $m(\angle ABC)$ $m(\angle ACB)$

7 In the opposite figure :

ABC is a triangle , $C \in \overline{BD}$ and $Y \in \overline{CD}$

, then $m(\angle ADY) \dots\dots\dots m(\angle DAC)$

, $m(\angle ABC) \dots\dots\dots m(\angle ADY)$

2 Use the opposite figure to arrange the given measures ascendingly , where B , C , D and E are collinear :

1 $m(\angle 1)$, $m(\angle 3)$

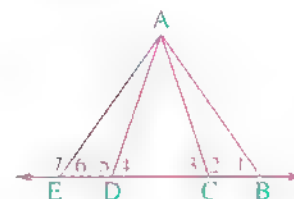

2 $m(\angle 2)$, $m(\angle 4)$

3 $m(\angle 5)$, $m(\angle 3)$

4 $m(\angle 2)$, $m(\angle 6)$

5 $m(\angle 3)$, $m(\angle 1)$, $m(\angle 5)$ | 6 $m(\angle 3)$, $m(\angle 5)$, $m(\angle 7)$

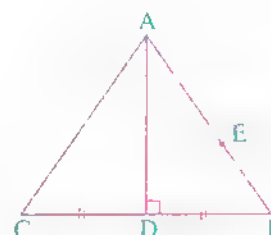

7 $m(\angle 3)$, $m(\angle 1)$, $m(\angle 7)$, $m(\angle 5)$

3 In the opposite figure :

$E \in \overline{AB}$, $\overline{AD} \perp \overline{BC}$ and D is the midpoint of \overline{BC}

Prove that : $AC > AE$

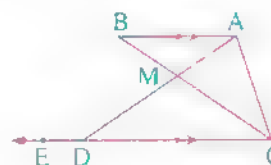

4 In the opposite figure :

$\overline{AB} \parallel \overline{CD}$, $\overline{AD} \cap \overline{BC} = \{M\}$, $E \in \overline{CD}$ and $E \notin \overline{CD}$

Prove that :

1 $m(\angle ACD) > m(\angle ABC)$

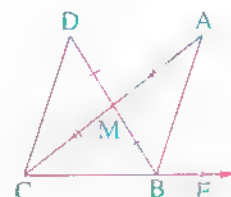

2 $m(\angle ADE) > m(\angle ABC)$

5 In the opposite figure :

$E \in \overline{CB}$ and M is the midpoint of each of \overline{AC} and \overline{BD}

Prove that : $m(\angle ABE) > m(\angle ACD)$

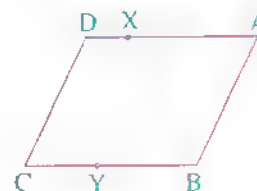

6 In the opposite figure :

ABCD is a parallelogram , $X \in \overline{AD}$ and $Y \in \overline{BC}$

such that $DX < BY$

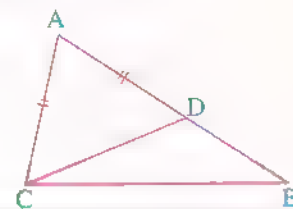

Prove that : $AX + AB > CY + CD$

7 In the opposite figure :

$D \in \overline{AB}$ where $AD = AC$

Prove that : $m(\angle ACB) > m(\angle B)$

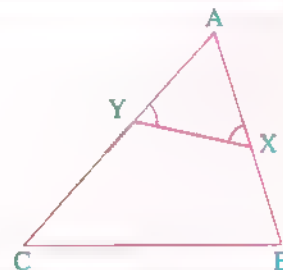

8 In the opposite figure :

ABC is a triangle in which : $AC > AB$, $X \in \overline{AB}$

and $Y \in \overline{AC}$ where $m(\angle AXY) = m(\angle AYX)$

Prove that : $YC > XB$

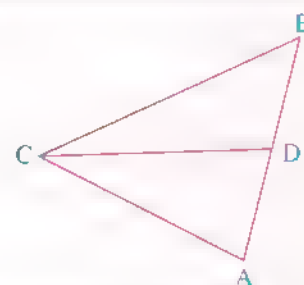

9 In the opposite figure :

ABC is a triangle in which :

$\overline{AB} \cong \overline{AC}$ and $D \in \overline{AB}$

Prove that : $m(\angle ADC) > m(\angle ACB)$

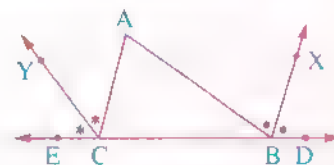

10 In the opposite figure :

$B \in \overline{DE}$, $C \in \overline{DE}$ such that

$m(\angle ACB) > m(\angle ABC)$

, \overline{BX} bisects $\angle ABD$ and \overline{CY} bisects $\angle ACE$

Prove that : $m(\angle ABX) > m(\angle ACY)$

11 M is a point inside the triangle ABC

Prove that : $m(\angle AMB) > m(\angle ACB)$

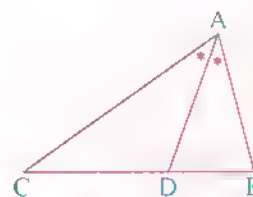

Not a student page

12 In the opposite figure :

ABC is a triangle in which : $m(\angle B) > m(\angle C)$, $D \in \overline{BC}$

such that \overline{AD} bisects $\angle BAC$

Prove that : $\angle ADC$ is an obtuse angle.

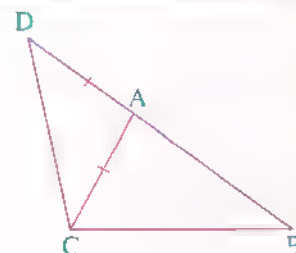

13 In the opposite figure :

ABC is a triangle in which : $m(\angle ACB) > m(\angle ABC)$

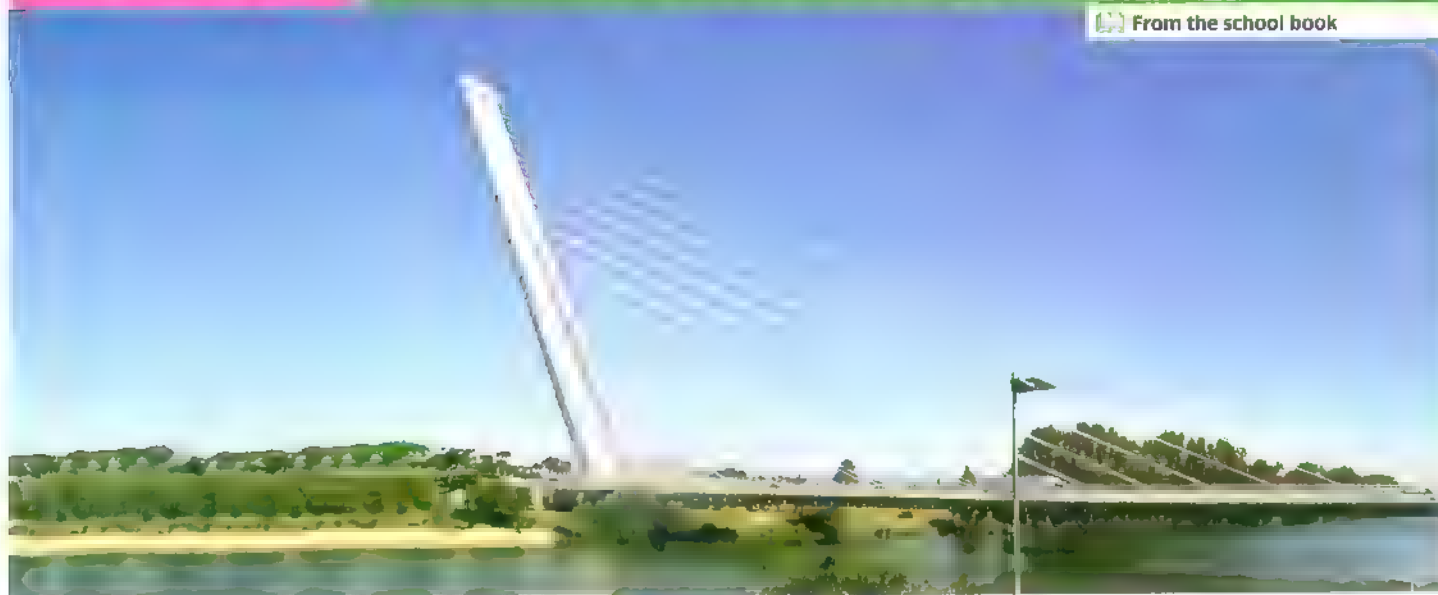

, $A \in \overline{BD}$ such that $AC = AD$

Prove that : $\angle BCD$ is an obtuse angle.

Remember Understand Apply Problem Solving

1 Complete the following :

- 1 The lengths of two sides in a triangle are not equal , then the greater side in length is opposite to
- 2 In $\triangle ABC$, $AB = 7$ cm. , $BC = 5$ cm. and $AC = 6$ cm. , then the smallest angle in measure is
- 3 In $\triangle DEF$, if $DE > EF$, then $m(\angle F) > \dots\dots\dots$
- 4 In any triangle ABC , if $AB > AC > BC$, then $m(\angle \dots\dots\dots) < m(\angle \dots\dots\dots) < m(\angle \dots\dots\dots)$

2 In each of the following figures , complete using ($>$ or $<$) :

3 Arrange the measures of the angles of $\triangle ABC$ in each of the following cases ascendingly :

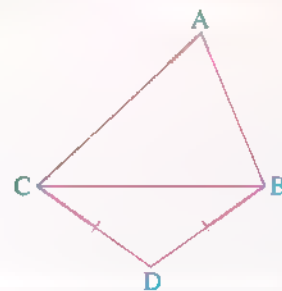

- 1 If $AB = 12$ cm. , $BC = 15$ cm. and $AC = 10$ cm.
- 2 If $AB = 5.7$ cm. , $BC = 8.5$ cm. and $AC = 6$ cm.

4 In the opposite figure :

$AC > AB$ and $DB = DC$

Prove that :

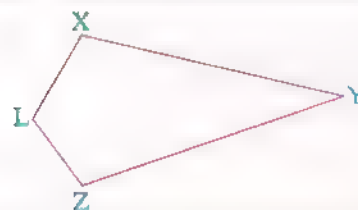

$m(\angle ABD) > m(\angle ACD)$

5 In the opposite figure :

$XY > XL$ and $YZ > ZL$

Prove that : $m(\angle XLZ) > m(\angle XYZ)$

6 In the opposite figure :

ABCD is a quadrilateral in which :

$AD = DC$ and $BC > AB$

Prove that : $m(\angle A) > m(\angle C)$

7 ABCD is a quadrilateral in which : \overline{AB} is the longest side , \overline{CD} is the shortest one

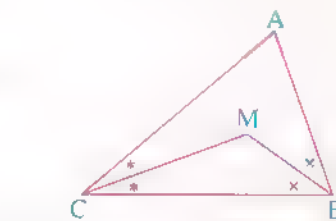

Prove that : $m(\angle BCD) > m(\angle BAD)$

8 In the opposite figure :

ABC is a triangle , \overline{BM} bisects $\angle ABC$ and \overline{CM} bisects $\angle ACB$

If $MC > MB$

, prove that : $m(\angle ABC) > m(\angle ACB)$

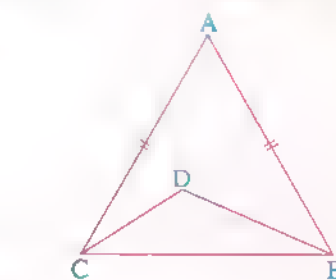

9 In the opposite figure :

ABC is a triangle in which :

$AB = AC$ and $DB > DC$

Prove that :

$m(\angle ABD) > m(\angle ACD)$

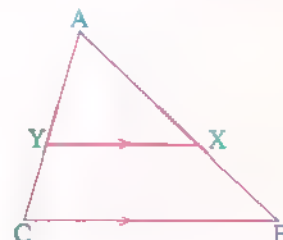

10 In the opposite figure :

ABC is a triangle ,

$AB > AC$ and $\overline{XY} \parallel \overline{BC}$

Prove that :

$m(\angle AYX) > m(\angle AXY)$

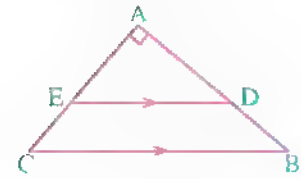

11 In the opposite figure :

ABC is a triangle in which : $m(\angle A) = 90^\circ$, $AB > AC$,

$D \in \overline{AB}$, $E \in \overline{AC}$ and $DE \parallel \overline{BC}$

Prove that : $m(\angle AED) > 45^\circ$

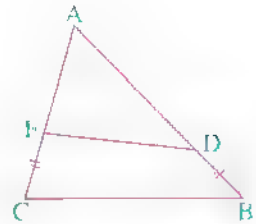

12 In the opposite figure :

ABC is a triangle in which :

$AB > AC$, $D \in \overline{AB}$ and

$E \in \overline{AC}$ where $BD = CE$

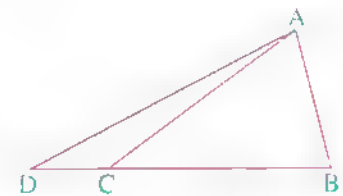

Prove that : $m(\angle AED) > m(\angle ADE)$

13 In the opposite figure :

$C \in \overline{BD}$ such that $AC > AB$

Prove that : $m(\angle ABD) > m(\angle D)$

14 In the opposite figure :

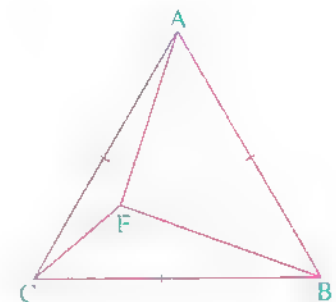

ABC is an equilateral triangle ,

E is a point inside it ,

$m(\angle ECB) > m(\angle EBC)$

Prove that : 1 $m(\angle ABE) > m(\angle ACE)$

2 $m(\angle A) > m(\angle ABE) > m(\angle ACE)$

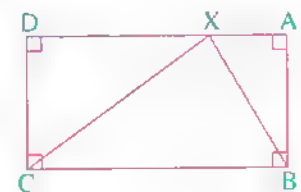

15 In the opposite figure :

$ABCD$ is a rectangle , $X \in \overline{AD}$

such that $XC > XB$

Prove that : $m(\angle ABX) < m(\angle XCD)$

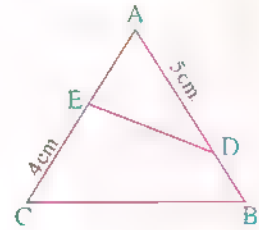

16 In the opposite figure :

ABC is an equilateral triangle

whose side length = 7 cm. , $D \in \overline{AB}$ such that

$AD = 5$ cm. and $E \in \overline{AC}$ such that $CE = 4$ cm.

Prove that : $m(\angle AED) > 60^\circ$

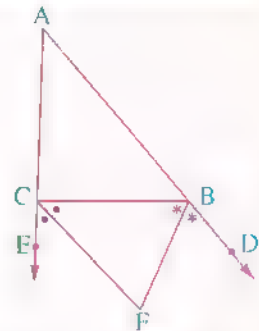

17 In the opposite figure :

ABC is a triangle in which :

$AB > AC$, $D \in \overline{AB}$, $E \in \overline{AC}$,

\overrightarrow{BF} bisects $\angle DBC$ and \overrightarrow{CF} bisects $\angle BCE$

Prove that : $m(\angle FBC) > m(\angle BCF)$

18 ABC is a triangle , D is a point inside it. If $DA > DB > DC$

Prove that : $m(\angle ACB) > m(\angle DAC) + m(\angle DBC)$

19 ABC is a triangle , \overline{AD} , \overline{CE} are two medians intersecting at M If $MD > ME$

Prove that : $m(\angle CAM) < m(\angle MCA)$

20 ABC is a triangle in which : $AB > AC$, D is the midpoint of \overline{AB}

Draw $\overline{DE} \parallel \overline{AC}$ to meet \overline{BC} at E

Prove that : $m(\angle CAE) > m(\angle DAE)$

21 In the opposite figure :

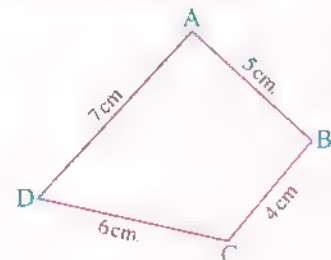

ABCD is a quadrilateral in which :

$AB = 5$ cm. , $BC = 4$ cm. , $CD = 6$ cm. and $DA = 7$ cm.

Prove that : 1 $m(\angle ABC) > m(\angle ADC)$

2 $m(\angle BCD) > m(\angle BAD)$

3 $m(\angle B) + m(\angle C) > 180^\circ$

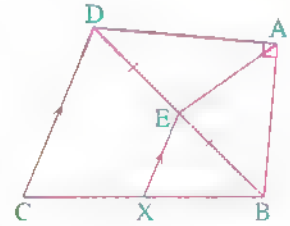

22 In the opposite figure :

ABCD is a quadrilateral in which : $m(\angle A) = 90^\circ$,

\overline{AE} is a median of $\triangle ABD$, $\overline{EX} \parallel \overline{DC}$ and

$\overline{EX} \cap \overline{BC} = \{X\}$ If $AE > EX$

Prove that : $m(\angle C) > m(\angle DBC)$

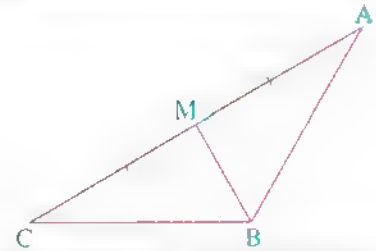

23 In the opposite figure :

\overline{BM} is a median in the

triangle ABC and $BM < AM$

Prove that : $\angle ABC$ is an obtuse angle.

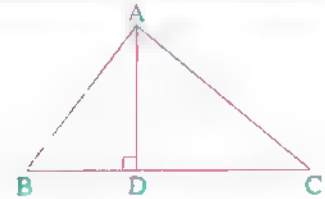

24 In the opposite figure :

ABC is a triangle in which : $AC > AB$, $\overline{AD} \perp \overline{BC}$

and intersects it at D

Prove that : $m(\angle BAD) < m(\angle CAD)$

25 ABC is a triangle , \overline{AD} bisects $\angle A$ and intersects \overline{BC} at D , if $AC > AB$

Prove that : $\angle ADC$ is an obtuse angle.

26 ABCD is a parallelogram in which : $AC > BD$

Prove that : $\angle D$ is an obtuse angle.

For excellent pupils

27 ABC is a triangle , D is the midpoint of \overline{BC} , if the perimeter of $\triangle ACD >$ the perimeter of $\triangle ABD$

Prove that : $m(\angle B) > m(\angle C)$

28 In the opposite figure :

$AB > AC$ and $DB = DC$

Prove that : $m(\angle BAD) < m(\angle CAD)$

Comparing the lengths
of sides in a triangle

Remember Understand Apply Problem Solving

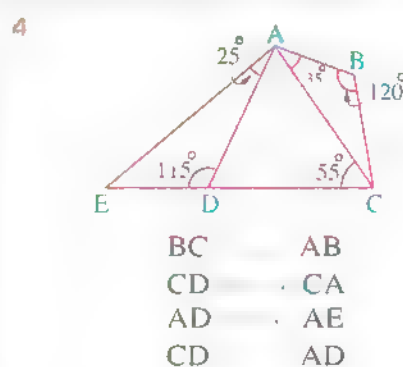

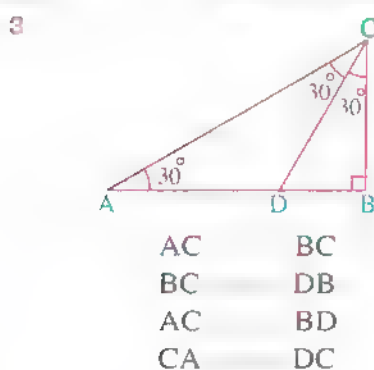

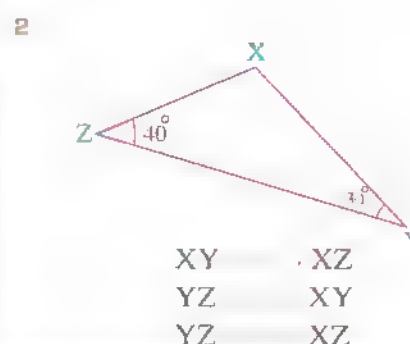

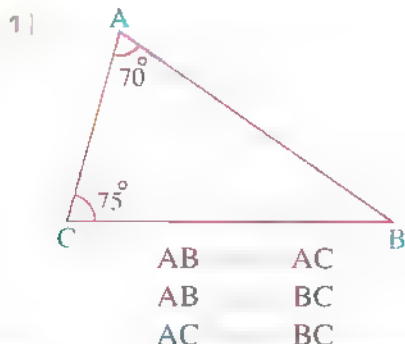

1 Complete the following :

- 1 If two angles in a triangle are unequal in measure , then the greater angle in measure is opposite to and if the two lengths of two sides in a triangle are unequal , then the greater side in length is opposite to the angle which is
- 2 The smallest angle of a triangle (in measure) is opposite to
- 3 The longest side in the right-angled triangle is
- 4 The shortest distance between a given point and a given straight line is
- 5 ABC is a triangle in which : $m(\angle C) = 110^\circ$, then its longest side is
- 6 In $\triangle ABC$: If $m(\angle A) = 50^\circ$, $m(\angle B) = 30^\circ$, then the shortest side in the triangle is
- 7 In $\triangle ABC$: If $m(\angle A) = m(\angle B) + m(\angle C)$, then the longest side in the triangle is

2 Choose the correct answer from those ones :

- 1 In $\triangle ABC$, if $m(\angle B) > m(\angle C)$, then
(a) $AB > AC$ (b) $BC > AC$ (c) $AC > AB$ (d) $AB > BC$
- 2 In $\triangle ABC$, if $m(\angle B) = 90^\circ$, then
(a) $AC > CB$ (b) $AB > AC$ (c) $BC > AC$ (d) $AB = AC$
- 3 In $\triangle ABC$, if $m(\angle A) = 40^\circ$ and $m(\angle B) = 70^\circ$, then
(a) $AB < AC$ (b) $AB > AC$ (c) $\overline{AB} \perp \overline{AC}$ (d) $AB = AC$
- 4 In $\triangle XYZ$, if $m(\angle X) = 110^\circ$, $m(\angle Y) = 40^\circ$, then XY XZ
(a) $<$ (b) $>$ (c) $=$ (d) $//$

In the following figures, complete using $>$, $<$ or $=$:

XYZ is a triangle in which : $m(\angle X) = 45^\circ$, $m(\angle Y) = 85^\circ$ and $m(\angle Z) = 50^\circ$

Arrange the lengths of the sides of the triangle ascendingly.

5 ABC is a triangle in which : $m(\angle A) = 40^\circ$ and $m(\angle B) = 75^\circ$

Order the lengths of the sides of the triangle descendingly.

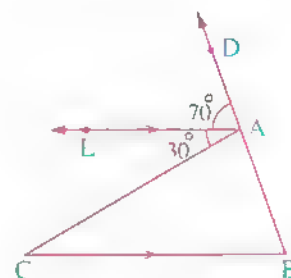

6 In the opposite figure :

$\overrightarrow{AE} \parallel \overrightarrow{BC}$,

$m(\angle DAE) = 70^\circ$

and $m(\angle EAC) = 30^\circ$

Prove that : $AC > AB$

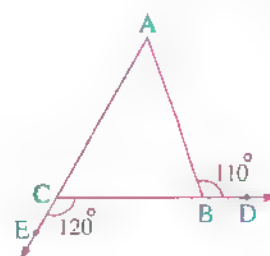

7 In the opposite figure :

ABC is a triangle, $D \in \overrightarrow{CB}$,

$E \in \overrightarrow{AC}$, $m(\angle ABD) = 110^\circ$

and $m(\angle BCE) = 120^\circ$

Prove that : $AB > BC$

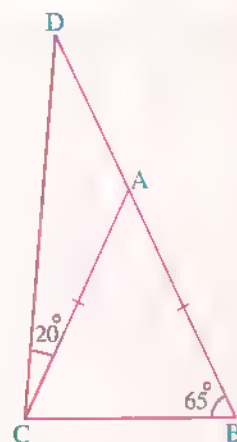

8 In the opposite figure :

$AB = AC$, $m(\angle ABC) = 65^\circ$

, $m(\angle ACD) = 20^\circ$, $A \in \overline{BD}$

Prove that : $AB > AD$

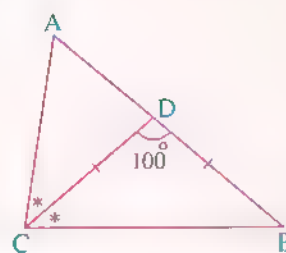

9 In the opposite figure :

ABC is a triangle , \overline{CD} bisects $\angle C$ and intersects \overline{AB} at point D

, $m(\angle BDC) = 100^\circ$ and $DB = DC$

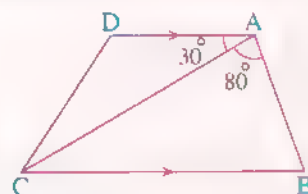

Prove that : $AC > DB$

10 In the opposite figure :

$\overline{AD} \parallel \overline{BC}$, $m(\angle BAC) = 80^\circ$ and $m(\angle DAC) = 30^\circ$

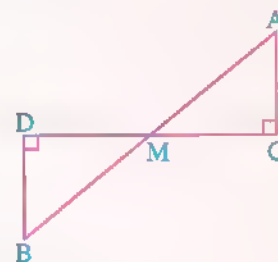

Prove that : $BC > AB$

11 In the opposite figure :

$\overline{AB} \cap \overline{CD} = \{M\}$, $\overline{AC} \perp \overline{CD}$ and $\overline{BD} \perp \overline{CD}$

Prove that : $AB > CD$

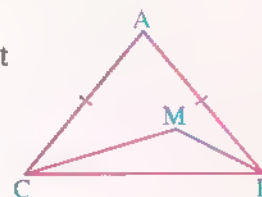

12 In the opposite figure :

ABC is a triangle in which : $AB = AC$, M is a point inside it such that

$m(\angle ABM) < m(\angle ACM)$

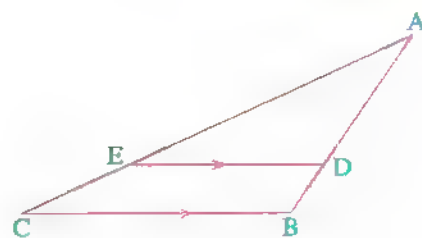

Prove that : $MC > MB$

13 In the opposite figure :

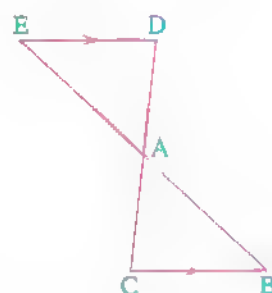

ABC is an obtuse-angled triangle at B
 $\overline{DE} \parallel \overline{BC}$

Prove that : $AE > AD$

14 In the opposite figure :

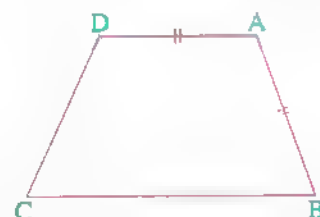

$AB > AC$, $\overline{DE} \parallel \overline{BC}$ and
 $\overline{DC} \cap \overline{BE} = \{A\}$

Prove that : $AE > AD$

15 In the opposite figure :

ABCD is a quadrilateral, $AB = AD$
 and $m(\angle D) > m(\angle B)$

Prove that : $BC > CD$

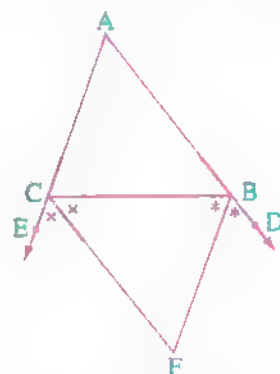

16 In the opposite figure :

ABC is a triangle in which : $AB > AC$, $D \in \overline{AB}$, $E \in \overline{AC}$
 \overline{BF} bisects $\angle DBC$ and \overline{CF} bisects $\angle BCE$
 $\overline{BF} \cap \overline{CF} = \{F\}$

Prove that :

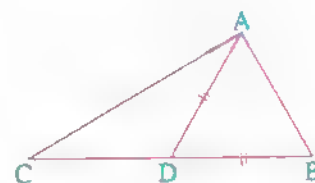

1 $m(\angle FBC) > m(\angle BCF)$

2 $CF > BF$

17 In the opposite figure :

ABC is a triangle and $D \in \overline{BC}$ where $BD = AD$

Prove that : $BC > AC$

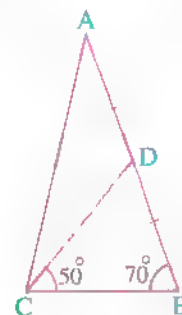

18 In the opposite figure :

D is the midpoint of \overline{AB} , $m(\angle B) = 70^\circ$ and $m(\angle DCB) = 50^\circ$

Prove that :

1 $m(\angle A) > m(\angle ACD)$

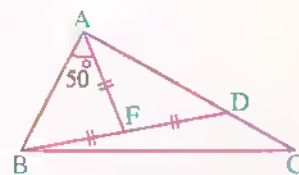

2 $\angle ACB$ is an acute angle.

19 In the opposite figure :

$AF = BF = DF$ and $m(\angle FAB) = 50^\circ$

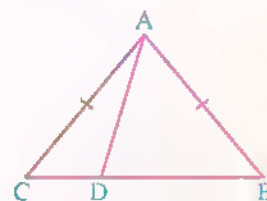

Prove that : 1 $AD > AB$ 2 $BC > AC$

20 In the opposite figure :

ABC is a triangle in which : $AB = AC$ and $D \in \overline{BC}$

Prove that : $AB > AD$

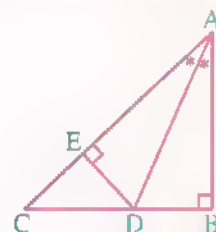

21 In the opposite figure :

$m(\angle B) = 90^\circ$, $\overline{DE} \perp \overline{AC}$ and \overline{AD} bisects $\angle BAE$

Prove that : 1 $BD = DE$

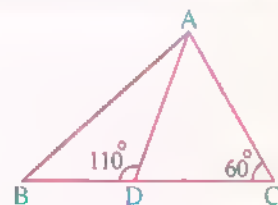

2 $DC > DB$

22 In the opposite figure :

$m(\angle ADB) = 110^\circ$ and $m(\angle C) = 60^\circ$

Prove that : $AB + AC > 2 AD$

23 ABC is a right-angled triangle at B

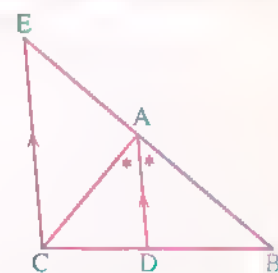

Prove that : $AB + BC < 2 AC$

24 In the opposite figure :

ABC is a triangle, \overline{AD} bisects $\angle BAC$

, $\overline{CE} \parallel \overline{DA}$ and cuts \overline{BA} at E

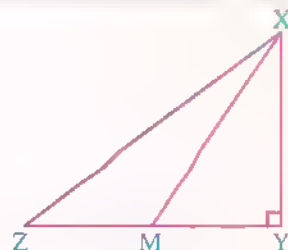

Prove that : $BE > BC$

25 In the opposite figure :

XYZ is a right-angled triangle at Y and $M \in \overline{YZ}$

Prove that : $XZ > XM$

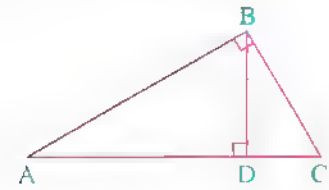

26 In the opposite figure :

$$m(\angle ABC) = 90^\circ, \overline{BD} \perp \overline{AC}$$

and $AB > BC$

Prove that : $AD > BD$

27 ABC is a triangle, \overrightarrow{CD} bisects $\angle C$, $\overrightarrow{CD} \cap \overline{AB} = \{D\}$

Prove that : $BC > BD$

28 ABC is a right-angled triangle at B, $D \in \overline{AC}$ and $E \in \overline{BC}$ where $AD = BE$

Prove that : $m(\angle CED) > m(\angle CDE)$

29 ABC is a triangle in which : $AB = AC$ and $X \in \overline{AC}$, draw \overline{XY} to cut \overline{AB} at Y and cut \overline{CB} at Z

Prove that : $AY > AX$

30 ABC is a triangle in which : $m(\angle A) = (5x + 2)^\circ$,

$$m(\angle B) = (6x - 10)^\circ \text{ and } m(\angle C) = (x + 20)^\circ$$

Order the lengths of sides of the triangle ascendingly.

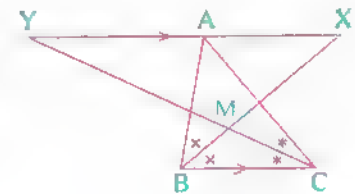

For excellent pupils

31 In the opposite figure :

$AB < AC$, $\angle B$ and $\angle C$ are bisected by two bisectors meeting at M, \overline{BM} and \overline{CM} intersect the straight line drawn from A parallel to \overline{BC} at X and Y respectively.

Prove that : $BX < CY$

● Remember ● Understand ● Apply ● Problem Solving

1 Is it possible to draw a triangle whose side lengths are as follows? Give reasons :

1 3 cm. , 4 cm. , 9 cm.

2 5 cm. , 7 cm. , 8 cm.

3 10 cm. , 6 cm. , 4 cm.

4 13 cm. , 8 cm. , 6 cm.

5 5 cm. , 3 cm. , 4 cm.

6 9 cm. , 9 cm. , 19 cm.

2 Find the interval to which the length of the third side of the triangle belongs in each of the following triangles if the lengths of the two other sides are :

1 6 cm. , 9 cm.

2 3 cm. , 3 cm.

3 2.9 cm. , 3.2 cm.

4 5.7 cm. , 7.3 cm.

3 Choose the correct answer from those given :

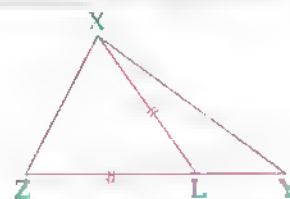

- 1 The sum of lengths of any two sides in a triangle is ... the length of the third side.
(a) less than (b) greater than (c) equal (d) half
- 2 The length of any side in a triangle ... the sum of lengths of the other two sides.
(a) $>$ (b) $<$ (c) $=$ (d) twice
- 3 Which of the following numbers cannot be the lengths of sides of a triangle ?
(a) 7 , 7 , 5 (b) 9 , 9 , 9 (c) 3 , 6 , 12 (d) 3 , 4 , 5
- 4 If the lengths of two sides in a triangle are 7 cm and 4 cm. , then the length of the third side can be
(a) 1 cm. (b) 2 cm. (c) 3 cm. (d) 4 cm.

- 5 If the lengths of two sides of an isosceles triangle are 3 cm. and 7 cm. , then the length of the third side is
- (a) 7 cm. (b) 3 cm. (c) 4 cm. (d) 10 cm.
- 6 A triangle has one axis of symmetry, the lengths of two sides in it are 4 cm. and 8 cm. , then its perimeter =
- (a) 16 cm. (b) 20 cm. (c) 24 cm. (d) 30 cm.
- 7 In $\triangle ABC$, if $AB = 3$ cm. , $BC = 5$ cm. and $AC = x$ cm. , then $x \in \dots\dots\dots$
- (a) $] 3 , 5 [$ (b) $] 2 , 5 [$ (c) $] 5 , 8 [$ (d) $] 2 , 8 [$
- 8 If the lengths of two sides of a triangle are 5 cm. and 10 cm. , then the length of the third side belongs to
- (a) $[10 , 15 [$ (b) $] 5 , 15 [$ (c) $] 5 , 10]$ (d) $[10 , 15]$
- 9 In $\triangle ABC$: $AB + BC - AC \dots\dots\dots$
- (a) $>$ zero (b) $<$ zero
(c) $=$ zero (d) $=$ the perimeter of the triangle ABC
- 10 In $\triangle ABC$, $\frac{AB + BC}{AC} \dots\dots\dots 1$
- (a) $>$ (b) $<$ (c) $=$ (d) \leq

4 In the opposite figure :

XYZ is a triangle in which $L \in \overline{YZ}$ such that $XL = LZ$

Prove that : $YZ > XY$

Prove that : $AB + BC + CD > AD$

13 Prove that the sum of the lengths of two diagonals in a convex quadrilateral is less than its perimeter.

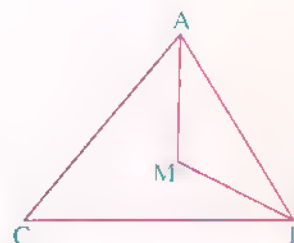

14 Prove that the perimeter of any quadrilateral is less than twice the sum of lengths of its diagonals.

15 In the opposite figure :

M is a point inside the triangle ABC

Prove that : $AM + MB < AC + BC$

16 ABC is a triangle and F is the midpoint of \overline{BC} **Prove that :**

1] $AB + AC > 2 AF$

2] $AB + AC > AF + BF$

A Research Project

On Unit Five

Project aims :

- Using the triangle inequality to determine three numbers can be side lengths of a triangle.
- Drawing a triangle knowing the lengths of its sides.
- Recognizing the type of a triangle according to the lengths of its sides.
- Recognizing the type of a triangle according to the measures of its angles.
- Comparing between the measures of angles of a triangle.
- Associating geometry with history.

Do a research project on the following topic :

"Many Arab scientists excelled in the field of geometry".

Discuss the following points using available resources :

- 1 Write a short note about some Arab scientists and their contributions in geometry.
- 2 Select three numbers can be side lengths of a triangle.
- 3 Use a ruler and a compass to draw that triangle.
- 4 Determine the type of that triangle according to the lengths of its sides and according to the measures of its angles.
- 5 Arrange the measures of the angles of that triangle in a descending order.

SKILLS

TIMSS Problems

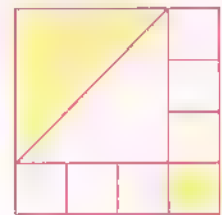

Accumulative basic skills

1 Complete the following :

- 1 A lamppost of height 4.5 metres is 2 metres far from a building of height 10.5 metres , then the distance between the top of the lamppost and the top of the building is metres.
- 2 The ratio between the lateral and the total areas of a cube is
- 3 A cuboid is of lateral area 200 cm^2 , and the dimensions of its base are 8 cm. and 12 cm , then its height equals cm.
- 4 The measure of the angle between the two hands of the clock at 7 o'clock in degrees is °

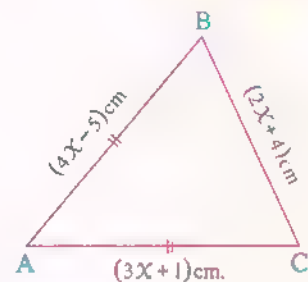

5 In the opposite figure :

A square divided into 7 small congruent squares and two congruent triangles. If the area of the coloured square = 4 cm^2 , , then the area of the coloured triangle is cm^2 .

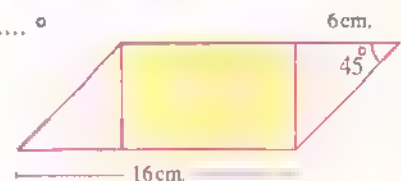

6 In the opposite figure :

ABC is a triangle in which : $AB = (4x - 5) \text{ cm}$,
 $BC = (2x + 4) \text{ cm}$, $AC = (3x + 1) \text{ cm}$, $AB = AC$
 , then the perimeter of $\triangle ABC =$ cm.

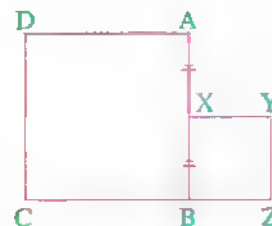

- 7 A rectangle its length is $x \text{ cm}$, , its width is $y \text{ cm}$, and its perimeter is $P \text{ cm}$, , then the relation between x , y and P is $x =$
- 8 If the side length of an equilateral triangle is 10 cm. , then its height is cm
- 9 The measure of the angle of the regular pentagon is °
- 10 The opposite figure shows a coloured rectangle inside a parallelogram , then the area of the rectangle equals cm^2 .

11 In the opposite figure :

If the perimeter of the square ABCD = 24 cm,
 , then the area of the square XYZB is cm^2 .

12 A cuboid is of total area 148 cm^2 , and its lateral area is 110 cm^2 , then the area of its base is cm^2 .

2 Choose the correct answer from the given ones :

1 The acute angle supplements angle.

- (a) an acute (b) an obtuse (c) a right (d) a reflex

2 The number of diagonals of the hexagon equals

- (a) 3 (b) 6 (c) 9 (d) 12

3 The number of axes of symmetry of the opposite shape is

- (a) 1 (b) 2 (c) 3 (d) 4

4 A wire in the shape of an equilateral triangle of side length 4 cm, is reshaped as a square, then the side length of the square is cm.

- (a) 12 (b) 16 (c) 4 (d) 3

5 In the opposite figure :

A circle of radius length 2 cm, touches two sides of a square, then the area of the coloured part is cm^2 .

- (a) $4 - \pi$ (b) $\pi - 2$ (c) $\frac{\pi}{2}$ (d) 2π

6 The ratio between the area of a square region of side length l cm, and the area of a square region of side length $2l$ cm, is

- (a) 1 : 2 (b) $l : 4$ (c) 1 : 4 (d) 4 : 1

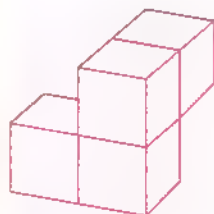

7 On a map, each 1 cm, represents 5 km. If the distance between two places is $\frac{1}{2}$ km, then the distance between them on the map is

- (a) 0.1 cm. (b) 10 cm. (c) 2.5 cm. (d) 0.4 cm.

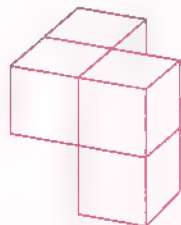

8 If the area of the base of a cuboid is 12 cm^2 , and the areas of two side faces are 6 cm^2 , and 8 cm^2 , then the volume of the cuboid is cm^3 .

- (a) 9 (b) 576 (c) 24 (d) 32

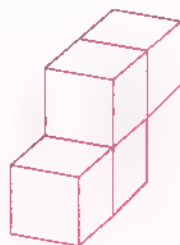

- 9 This solid will be rotated to another position.
Which of the following may be a position of the solid after rotation ?

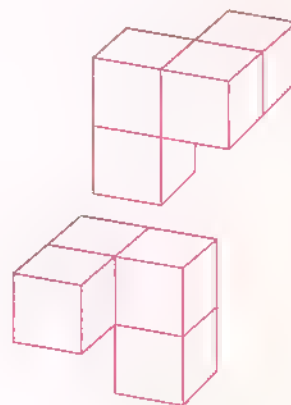

(a)

(b)

(c)

(d)

- 10 In the opposite figure :

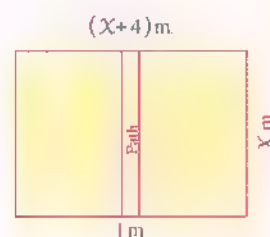

A rectangular garden with a rectangular path of width 1 metre. Which expression shows the area of the coloured part of the garden in square metres ?

(a) $x^2 + 3x$

(b) $x^2 + 4x$

(c) $x^2 + 4x - 1$

(d) $x^2 + 3x - 1$

- 11 The opposite figure represents a quarter of a circle of radius length 2 cm. , then the perimeter of the figure in centimetres is

(a) 2π

(b) 5π

(c) $\pi + 4$

(d) $4\pi + 4$

- 12 The area of a square whose side length is an integer may be cm^2 .

(a) 600

(b) 900

(c) 800

(d) 700

- 13 In the opposite figure :

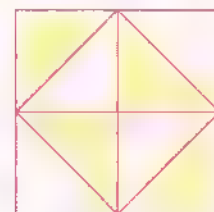

A square of perimeter 32 cm. divided into 8 congruent triangles , then the area of the coloured region is cm^2 .

(a) 4

(b) 8

(c) 16

(d) 32

- 14 In the opposite figure :

If $m(\angle A) + m(\angle C) = 140^\circ$

, $m(\angle B) = m(\angle D)$

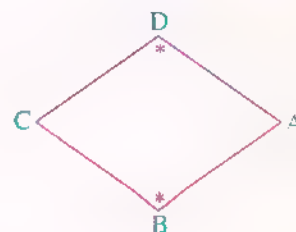

, then $m(\angle B) =$.

(a) 50°

(b) 55°

(c) 110°

(d) 220°

Accumulative Tests

on Algebra and Statistics

**1** Choose the correct answer from the given ones :

1 $\sqrt[3]{2\frac{10}{27}} = \dots\dots\dots$

(a) $\frac{3}{4}$

(b) $\frac{10}{3}$

(c) $\frac{4}{3}$

(d) $\frac{20}{27}$

2 $\sqrt{25} - \sqrt[3]{125} = \dots\dots\dots$

(a) 10

(b) 5

(c) zero

(d) -5

3 $\sqrt{4} = \sqrt[3]{\dots\dots\dots}$

(a) 2

(b) 4

(c) 8

(d) 16

4 $\sqrt[3]{\dots\dots\dots} + \sqrt[3]{27} = \sqrt{64}$

(a) 25

(b) -125

(c) 125

(d) 5

5 If $\sqrt[3]{x} = \frac{1}{4}$, then $x = \dots\dots\dots$

(a) $\frac{1}{2}$

(b) $\frac{1}{16}$

(c) $\frac{1}{64}$

(d) $\frac{1}{12}$

6 If $\sqrt[3]{x^2} = 4$, then $x = \dots\dots\dots$

(a) 8

(b) ± 8

(c) 4

(d) ± 4

7 $\sqrt[3]{x^6} = \sqrt{\dots\dots\dots}$

(a) x

(b) x^2

(c) x^3

(d) x^4

8 The cube whose volume is 1 cm^3 , then the sum of all its edge lengths = $\dots\dots\dots$ cm.

(a) 1

(b) 6

(c) 8

(d) 12

2 Find the S.S. of each of the following equations in \mathbb{Q} :

1 $x^3 + 1 = \text{zero}$

2 $8x^3 + 7 = 8$

**1 Choose the correct answer from the given ones :**

1 $\sqrt{6} \in \dots$

(a) \mathbb{N}

(b) \mathbb{Q}

(c) \mathbb{Q}

(d) \mathbb{Z}

2 The irrational number located between 2 and 3 is

(a) $\sqrt{7}$

(b) $\sqrt{10}$

(c) 2.5

(d) $\sqrt{3}$

3 If the volume of a cube is 125 cm^3 , then the area of one of its faces is

(a) 25 cm^2

(b) 50 cm^2

(c) 100 cm^2

(d) 125 cm^2

4 The nearest integer to $\sqrt[3]{-28}$ is

(a) -4

(b) -30

(c) -3

(d) 3

5 If $x = \sqrt{2}$, $y = 2$, then which of the following does not represent a rational number ?

(a) $x^2 + y$

(b) $x + y^2$

(c) $\sqrt{x^2 y}$

(d) $\sqrt{2} x y$

6 If $x < \sqrt{7} < x + 1$, then $x = \dots$

(a) 4

(b) 3

(c) 2

(d) 5

7 $\sqrt[3]{-8} + \sqrt{4} = \dots$

(a) 4

(b) 2

(c) zero

(d) 13

8 The S.S. of the equation : $x^2 - 16 = \text{zero}$ in \mathbb{Q} is

(a) \emptyset

(b) $\{-4\}$

(c) $\{-4, 4\}$

(d) $\{4\}$

2 [a] Prove that : $\sqrt{5}$ is included between 2.2 and 2.3**[b] Without using the calculator , prove that :**

$\sqrt[3]{15}$ is included between 2.4 and 2.5

Accumulative test

3**till lesson 3 – unit 1**

Choose the correct answer from the given ones :

1 The set of real numbers $\mathbb{R} = \dots\dots\dots$

- (a) $\mathbb{R}_+ \cup \mathbb{R}_-$ (b) $\mathbb{R}^* - \mathbb{R}_+$ (c) $\mathbb{Q} \cup \mathbb{Q}$ (d) $\mathbb{Q} \cap \mathbb{Q}$

2 $\mathbb{Q} \cap \mathbb{Q} = \dots\dots\dots$

- (a) \mathbb{Q} (b) \mathbb{Q} (c) \mathbb{R} (d) \emptyset

3 $\mathbb{R}_+ \cup \mathbb{R}_- = \dots\dots\dots$

- (a) \mathbb{R}_+ (b) \mathbb{R}_- (c) \mathbb{R}^* (d) \mathbb{R}

4 The irrational number located between 4 and 5 is $\dots\dots\dots$

- (a) $\sqrt{8}$ (b) $4\sqrt{2}$ (c) $3\sqrt{2}$ (d) $\sqrt{10}$

5 $\sqrt[3]{9} \dots\dots\dots \sqrt{4}$

- (a) $>$ (b) $<$ (c) $=$ (d) \leq

6 Which of the following rational numbers is located between $\frac{1}{5}$ and $\frac{2}{5}$?

- (a) $\frac{2}{10}$ (b) $\frac{1}{10}$ (c) 0.3 (d) -0.3

7 The S.S. of : $x^2 + 25 = \text{zero}$ in \mathbb{Q} is $\dots\dots\dots$

- (a) \emptyset (b) $\{-5, 5\}$ (c) $\{5\}$ (d) $\{-5\}$

8 The S.S. of the equation : $x^3 + 8 = 0$ in \mathbb{R} is $\dots\dots\dots$

- (a) \emptyset (b) $\{2\}$ (c) $\{-8\}$ (d) $\{-2\}$

9 $\sqrt[3]{64} - \sqrt{64} = \dots\dots\dots$

- (a) 4 (b) 8 (c) zero (d) -4

10 If $\frac{1}{a}$, $\frac{a}{\sqrt{5}}$ are two real numbers included between zero and 1, then a can equal $\dots\dots\dots$

- (a) -2 (b) 1 (c) $\sqrt{5}$ (d) 2

Accumulative test

4**till lesson 4 – unit 1****1 Choose the correct answer from the given ones :****1** The interval that represents : $X = \{x : x \in \mathbb{R}, -1 < x \leq 4\}$ is

- (a) $[-4, 1]$ (b) $] -4, 1[$ (c) $[-1, 4[$ (d) $] -1, 4]$

2 $\{ \text{The multiplicative identity element}, 3 \}$ $[0, 3]$

- (a) \in (b) \notin (c) \subset (d) $\not\subset$

3 $\mathbb{R} = \dots\dots\dots$

- (a) $\mathbb{R}_+ \cup \mathbb{R}_-$ (b) $] -\infty, \infty[$ (c) $] -\infty, 0]$ (d) $[0, \infty[$

4 If $\sqrt[4]{4} - \sqrt[3]{x} = 5$, then $x = \dots\dots\dots$

- (a) 125 (b) 27 (c) -27 (d) 3

5 The square whose area is 10 cm^2 , then its side length is cm.

- (a) 5 (b) -5 (c) $\sqrt{10}$ (d) $-\sqrt{10}$

6 $[-5, 3] -] -5, 3[= \dots\dots\dots$

- (a) $\{3\}$ (b) $\{-5\}$ (c) $\{-5, 3\}$ (d) $\{-3\}$

7 If x is a negative number, then which of the following numbers is positive ?

- (a) x^3 (b) $2x$ (c) x^2 (d) $\frac{x}{2}$

8 $] -\infty, 1[\cup] 1, \infty[= \dots\dots\dots$

- (a) \mathbb{R} (b) $\{1\}$ (c) \emptyset (d) $\mathbb{R} - \{1\}$

2 If $X = [2, 5]$, $Y = [0, 3]$ **1** Write X using the description method.**2** Represent X, Y on the number line.**3** Find : $X - Y$ as an interval by using the number line. Is $\sqrt[4]{29} \in X - Y$?**3** If $X = [-1, 4]$, $Y = [3, \infty[$, find using the number line each of : $X \cup Y, X \cap Y, Y - X$

1 Choose the correct answer from the given ones :

1 $\frac{6}{\sqrt{3}} = \dots\dots\dots$

(a) $\sqrt{2}$

(b) 2

(c) $2\sqrt{3}$

(d) $6\sqrt{3}$

2 $(2^3\sqrt{2})^3 = \dots\dots\dots$

(a) 4

(b) 8

(c) 16

(d) 40

3 The multiplicative inverse of $\frac{\sqrt{2}}{2}$ is $\dots\dots\dots$

(a) $\sqrt{2}$

(b) $2\sqrt{2}$

(c) 2

(d) $-\frac{\sqrt{2}}{2}$

4 $[-1, 5] - \{-1, 5\} = \dots\dots\dots$

(a) $\{-1, 5\}$

(b) $] -1, 5[$

(c) $] -1, 5]$

(d) $[-1, 5[$

5 $\mathbb{Q} \cup \mathbb{Q} = \dots\dots\dots$

(a) zero

(b) \mathbb{Z}

(c) \mathbb{R}

(d) \emptyset

6 The cube whose volume is 8 cm^3 , its total area = $\dots\dots\dots \text{ cm}^2$

(a) 16

(b) 24

(c) 64

(d) 8

7 The rectangle whose dimensions are $(\sqrt{7} - 1) \text{ cm}$, $(\sqrt{7} + 1) \text{ cm}$, its area is $\dots\dots\dots \text{ cm}^2$

(a) 8

(b) 7

(c) 6

(d) $2\sqrt{7}$

8 If $x = \sqrt{2} + 3$, $y = \sqrt{2} - 3$, then $x^2 - y^2 = \dots\dots\dots$

(a) $2\sqrt{3}$

(b) $12\sqrt{2}$

(c) $6\sqrt{5}$

(d) $3\sqrt{6}$

2 If $y = \sqrt{2 + \sqrt{3}}$, find the value of : $y^4 - 2y^2 + 1$

3 If $a = 5 - \sqrt{3}$, $b = 5 + \sqrt{3}$, find in the simplest form "Showing steps"

1 $a b$

2 $a^2 + b^2$

Accumulative test

till lesson 6 – unit 1

1 Choose the correct answer from the given ones :

1 The multiplicative inverse of the number $\sqrt{32}$ is

(a) $4\sqrt{2}$

(b) $\frac{\sqrt{2}}{8}$

(c) $2\sqrt{5}$

(d) $\frac{\sqrt{3}}{2}$

2 $\sqrt{5}, \sqrt{20}, \sqrt{45}, \sqrt{80}, \dots$ "In the same pattern"

(a) $\sqrt{75}$

(b) $\sqrt{90}$

(c) $\sqrt{112}$

(d) $\sqrt{125}$

3 $\sqrt{75} - \sqrt{27} - \sqrt{12} = \dots$

(a) $\sqrt{3}$

(b) zero

(c) $-\sqrt{3}$

(d) $-2\sqrt{3}$

4 The additive inverse of the number $-\sqrt{5}$ is

(a) $\sqrt{5}$

(b) 5

(c) -5

(d) $\frac{-1}{\sqrt{5}}$

5 $]-1, 3] \cap [-3, -1] = \dots$

(a) \emptyset

(b) $\{-3\}$

(c) $\{-1\}$

(d) $\{3\}$

6 The S.S. of the equation : $X^2 + 9 = 0$ in \mathbb{R} is

(a) $\{3\}$

(b) \emptyset

(c) $\{-3\}$

(d) $\{-3, 3\}$

7 $\sqrt{\frac{1}{2}} + \sqrt{\frac{1}{2}} = \dots$

(a) $2\sqrt{2}$

(b) 1

(c) $\sqrt{2}$

(d) $\frac{\sqrt{2}}{2}$

8 If $X = 2\sqrt{2} - \sqrt{7}$, $y = 2\sqrt{2} + \sqrt{7}$, then $XY - 1 = \dots$

(a) 5

(b) zero

(c) -4

(d) 7

2 If $A =]-\infty, 3[$, $B = [-2, 5]$, find using the number line each of :

1 $A \cap B$

2 $B - A$

3 Simplify each of the following to the simplest form :

1 $\sqrt{18} + \sqrt{54} - 3\sqrt{2} - \frac{1}{2}\sqrt{24}$

2 $\sqrt{128} - \frac{14}{\sqrt{2}} + 6\sqrt{\frac{1}{2}} - (\sqrt{2})^5$

**1 Choose the correct answer from the given ones :****1** The conjugate number of the number : $\sqrt{3} + \sqrt{2}$ is

- (a)
- $\sqrt{3} + \sqrt{2}$
- (b)
- $\sqrt{3} - \sqrt{2}$
- (c)
- $\sqrt{3}$
- (d)
- $-\sqrt{2}$

2 The multiplicative inverse of the number : $1 - \sqrt{2}$ is

- (a)
- $\sqrt{2} - 1$
- (b)
- $1 - \sqrt{2}$
- (c)
- $-\sqrt{2} - 1$
- (d)
- $1 + \sqrt{2}$

3 If $x = 2 + \sqrt{5}$, $y = 2 - \sqrt{5}$, then $(x - y)^2 =$

- (a)
- $2\sqrt{8}$
- (b) 20 (c)
- $4\sqrt{5}$
- (d) -1

4 $\{-3, 2\} \cap \mathbb{Z}_+ =$

- (a)
- $\{1\}$
- (b)
- $\{1, 2\}$
- (c)
- $\{2, -3\}$
- (d)
- \emptyset

5 $\sqrt{16} - \sqrt[3]{-64} =$

- (a) zero (b) 12 (c) 8 (d) -8

6 The irrational number included between 3 and 6 is

- (a)
- $\sqrt{5}$
- (b)
- $\sqrt{10}$
- (c)
- $\sqrt{25}$
- (d)
- $\sqrt[3]{27}$

7 The multiplicative inverse of the number : $\frac{\sqrt{5}}{5}$ is

- (a)
- $5\sqrt{5}$
- (b)
- $-\sqrt{5}$
- (c)
- $\sqrt{5}$
- (d)
- $2\sqrt{5}$

8 If $x = \sqrt{7} + \sqrt{3}$ and y is the conjugate number of x , then $xy =$

- (a) 10 (b) 4 (c) 40 (d) 58

2 [a] If $xy = 1$, $y = 2 + \sqrt{3}$, find the value of : $x^2 + \sqrt{48}$ in its simplest form.

[b] Without using the calculator , simplify the following to the simplest form :

$$2\sqrt{5}(\sqrt{5} - 2) + \sqrt{20} - 10\sqrt{\frac{1}{5}}$$

3 If $x = \sqrt{5} + 2$, $y =$ the multiplicative inverse of x , prove that x and y are conjugatenumbers , then find the value of : $\left(\frac{x-y}{x+y}\right)^2$

Accumulative test

(a) $[0, 3]$ (b) $]0, 3]$ (c) $[0, 3[$ (d) $]0, 3[$
- 7 A right circular cylinder whose base area is 20 cm^2 and its volume is 80 cm^3 , then its height = cm.
(a) 3 (b) 4 (c) 5 (d) 100
- 8 A sphere and a cylinder are equal in volume and their radii are equal in length, then the height of the cylinder = the radius of the sphere.
(a) 3 (b) 4 (c) $\frac{3}{4}$ (d) $\frac{4}{3}$

- 2 [a] Find the height of a right circular cylinder whose height is equal to its base radius length and its volume is $64 \pi \text{ cm}^3$.

[b] If $x = \frac{4}{\sqrt{7} - \sqrt{3}}$, $y = \sqrt{7} - \sqrt{3}$

, prove that : x, y are two conjugate numbers, then find the value of : xy

- 3 [a] The volume of a sphere is $36 \pi \text{ cm}^3$. Calculate its surface area in terms of π

[b] Simplify to the simplest form : $\sqrt{125} - \sqrt[3]{250} + \frac{1}{2} \sqrt[3]{16} + \sqrt{20}$

**1 Choose the correct answer from the given ones :**

1 The S.S. of the equation : $x + 5 = |-5|$ in \mathbb{N} is

- (a) \emptyset (b) $\{0\}$ (c) $\{10\}$ (d) $\{-10\}$

2 The S.S. of the inequality : $-2x \geq 6$ in \mathbb{R} is the interval

- (a) $]-\infty, -3]$ (b) $[3, \infty[$ (c) $]3, \infty[$ (d) $]-\infty, -3[$

3 The S.S. of the equation : $\sqrt[3]{3}x - 1 = 2$ in \mathbb{R} is

- (a) $\{2\sqrt[3]{3}\}$ (b) $\{\sqrt[3]{3}\}$ (c) $\{2\}$ (d) $\{2\sqrt[3]{2}\}$

4 If three quarters of the volume of a sphere is $8\pi \text{ cm}^3$, then its radius length is cm.

- (a) 64 (b) 8 (c) 4 (d) 2

5 The S.S. of the equation : $(x^2 + 9)(x^3 + 1) = \text{zero}$ in \mathbb{R} is

- (a) \emptyset (b) 1 (c) $\{-1\}$ (d) $\{3, 1\}$

6 The irrational number included between 2 and 3 is

- (a) $2\frac{1}{2}$ (b) $\sqrt{10}$ (c) $\sqrt{7}$ (d) $\sqrt{3}$

7 The S.S. of the inequality : $x + 3 < 3$ in \mathbb{R} is

- (a) $[0, \infty[$ (b) \mathbb{R}_- (c) $]-\infty, 0]$ (d) \mathbb{R}_+

8 The S.S. of the inequality : $-2 < 3x + 7 \leq 10$ in \mathbb{R} is

- (a) $]-3, 1]$ (b) $]1, 3]$ (c) $[-3, 1]$ (d) $[-3, 1[$

2 [a] The volume of a sphere is $\frac{99000}{7} \text{ cm}^3$, calculate its radius length. $(\pi = \frac{22}{7})$

[b] Find the S.S. of the inequality : $-3 \leq 2x + 1 < 7$ in \mathbb{R} in the form of an interval, then represent the solution on the number line.

3 [a] If $X = [-1, 4[$, $Y = [2, 6]$ using the number line find each of the following :

- 1** $X \cup Y$ **2** $X \cap Y$

[b] Find in \mathbb{R} the S.S. of the inequality : $x - 1 < 3 - x \leq x + 5$ in the form of an interval and represent it on the number line.

Accumulative test 11 till lesson 1 – unit 2

1 Choose the correct answer from the given ones :

- 1 If $(2, -5)$ satisfies the relation : $3x - y + k = 0$, then $k = \dots\dots\dots$
(a) 1 (b) 11 (c) -1 (d) -11
- 2 The relation : $2x + y = 6$ is represented by a straight line intersects the y-axis at the point $\dots\dots\dots$
(a) $(0, -6)$ (b) $(0, 6)$ (c) $(6, 0)$ (d) $(3, 0)$
- 3 The relation : $2x = 3y$ is represented by a straight line passing through the point $\dots\dots\dots$
(a) $(2, 3)$ (b) $(0, \frac{3}{2})$ (c) $(0, 0)$ (d) $(\frac{2}{3}, 0)$
- 4 The S.S. of the equation : $x + 9 = |-5|$ in \mathbb{R} is $\dots\dots\dots$
(a) $\{0\}$ (b) \emptyset (c) $\{-4\}$ (d) $\{4\}$
- 5 The volume of a sphere is $\frac{32}{3} \pi \text{ cm}^3$, then its radius length = $\dots\dots\dots$ cm.
(a) 2 (b) 4 (c) 8 (d) 32
- 6 The simplest form of the expression : $(\sqrt{3} - \sqrt{2})(\sqrt{3} + \sqrt{2})$ is $\dots\dots\dots$
(a) $\sqrt{3}$ (b) 1 (c) $\sqrt{2}$ (d) $2\sqrt{3}$
- 7 The point $(3k, 2k)$ lies on the straight line : $x - 3y = 9$, then $k = \dots\dots\dots$
(a) -3 (b) 1 (c) 0 (d) 2
- 8 The x-axis is the graphical representation of the relation $y = \dots\dots\dots$
(a) 1 (b) -1 (c) zero (d) x

2 [a] Find four ordered pairs satisfying the relation : $y + 2x = 5$

[b] Without using the calculator , simplify the following to the simplest form :

"Showing steps"

$$\sqrt{12} + \sqrt[3]{54} + 3\sqrt{\frac{1}{3}} - 6\sqrt[3]{\frac{1}{4}}$$

3 [a] Find in \mathbb{R} the S.S. of the inequality :

$-2x + 5 \leq x - 4$ and represent it on the number line.

[b] Graph the relation : $x - 4y = 4$ and if the straight line representing the relation intersects the x-axis at the point A and the y-axis at the point B , find the area of the triangle OAB where O is the origin point.

Accumulative test

12**till lesson 2 – unit 2****1 Choose the correct answer from the given ones :**

- 1 The slope of the straight line which passes through the two points (2 , 3) and (3 , 4) is ...
 (a) $\frac{1}{2}$ (b) $-\frac{1}{2}$ (c) 1 (d) -1
- 2 Which of the following ordered pairs satisfies the relation : $y = -x - 3$?
 (a) (1 , -4) (b) (-2 , -5) (c) (1 , -2) (d) (3 , 0)
- 3 $\sqrt{16} - \sqrt[3]{-64} = \dots\dots\dots$
 (a) zero (b) 12 (c) 8 (d) -8
- 4 The slope of the straight line perpendicular on y-axis is
 (a) positive. (b) negative. (c) zero. (d) undefined.
- 5 The slope of the vertical straight line is
 (a) zero (b) 1 (c) -1 (d) undefined.
- 6 The lateral area of the cube whose volume is 216 cm^3 equals cm^2
 (a) 36 (b) 6 (c) 144 (d) 216
- 7 If the straight line which passes through the two points (2 , 3) and (5 , y) is parallel to X-axis , then y =
 (a) 3 (b) -3 (c) zero (d) $\frac{1}{3}$
- 8 If the slope of the straight line representing the relation : $x + m y = 5$ is undefined , then m =
 (a) 1 (b) -1 (c) 5 (d) zero

- 2 [a] Represent graphically , then find the slope of the straight line that represents the relation : $x + y = 7$

[b] Find the S.S. in \mathbb{R} for the inequality :

$2x + 3 \leq 5x + 3 \leq 2x + 9$, then represent it on the number line.

- 3 [a] Prove that the points A , B and C are collinear where A (2 , -3) , B (4 , -5) and C (0 , -1)

[b] Simplify to the simplest form : $5\sqrt{8} + 4\sqrt[3]{\frac{1}{4}} - 2\sqrt{50} - \sqrt[3]{16}$

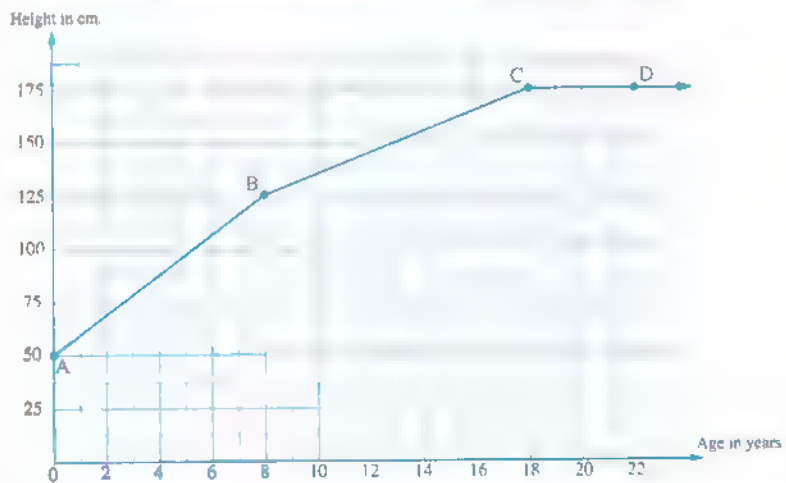

1 Choose the correct answer from the given ones :

- 1 If 100 gm. of food have 300 calories , then the number of calories that exist in 30 gm. of the same food equals calories.
 (a) 90 (b) 100 (c) 900 (d) 9000
- 2 The slope of any straight line parallel to X-axis is ...
 (a) positive. (b) negative. (c) zero. (d) undefined.
- 3 The slope of the straight line which passes through the two points : (2 , k) and (4 , 7) equals 3 , then the value of k =
 (a) 5 (b) 4 (c) 3 (d) 1
- 4 The straight line which represents the relation : $4x = 3y$ is passing through the point
 (a) (4 , 3) (b) (3 , 4) (c) (4 , 0) (d) (0 , 3)
- 5 $\sqrt{9} \dots\dots\dots] - 3 , \infty [$
 (a) \subset (b) $\not\subset$ (c) \in (d) \notin

2 The opposite figure shows the relation between the height of a person (in cm.) and his age (in years) :

- 1 Find the slope of each of \overrightarrow{AB} , \overrightarrow{BC} and \overrightarrow{CD}
- 2 Calculate the difference between the height of this person when he was 8 years old and his height when he was 30 years old.

- 3 [a] A right circular cylinder , its diameter length is 14 cm. and its height is 10 cm. , find the lateral area and the volume of the cylinder. $(\pi = \frac{22}{7})$
 [b] Represent graphically the relation : $y - 2x = 1$, then find the points of intersection of the straight line with the two axes.

4 If \mathbb{R}_+ is the set of the positive real numbers and $Z = [-2 , 3]$, find :

- 1 $\mathbb{R}_+ \cap Z$
- 2 $\mathbb{R}_+ \cup Z$
- 3 \mathbb{R}_+

Accumulative test 14 till lesson 1 – unit 3

1 Choose the correct answer from the given ones :

1 If $(5, a)$ satisfies the relation : $x + y = 3$, then $a = \dots\dots\dots$

- (a) 2 (b) zero (c) - 2 (d) 8

2 The irrational number included between 3 and 4 is $\dots\dots\dots$

- (a) 1.5 (b) $\sqrt{5}$ (c) $\sqrt{11}$ (d) 3.5

3 The slope of the straight line passing through $(3, 2)$ and $(4, 2)$ is $\dots\dots\dots$

- (a) undefined. (b) $\frac{4}{7}$ (c) zero (d) $\frac{1}{7}$

4 $\sqrt{50} - \sqrt{8} = \dots\dots\dots$

- (a) $\sqrt{42}$ (b) $3\sqrt{2}$ (c) $2\sqrt{3}$ (d) $\sqrt{58}$

2 The following table shows the marks obtained by 30 students in an examination :

5	9	11	4	9	9	16	7	8	12	2	10	7	12	5
8	15	13	13	9	7	14	19	3	11	14	3	12	13	7

Form the frequency table to these data.

3 [a] Find the S.S. in \mathbb{R} of the following inequality as an interval : $1 < 3x - 2 < 13$

[b] Find three ordered pairs satisfying the relation :

$y = x + 2$, then represent it graphically.

4 [a] Simplify to the simplest form : $4\sqrt{\frac{1}{2}} + \sqrt{32} - \sqrt{72}$

[b] If $x = \sqrt{5} + 2$, $xy = 1$

, find : y , then prove that x and y are two conjugate numbers.

1 Choose the correct answer from the given ones :

- 1 The slope of the straight line passes through (1, 5) and (5, -3) is
 (a) 4 (b) -2 (c) zero (d) undefined.
- 2 If $x = 2 + \sqrt{5}$, $y = 2 - \sqrt{5}$, then $(x - y)^2 =$
 (a) $2\sqrt{8}$ (b) 20 (c) $4\sqrt{5}$ (d) -1
- 3 The figure  represents the interval
 (a) $[3, 7[$ (b) $[3, 7]$ (c) $]3, 7[$ (d) $]3, 7]$
- 4 If the point (3, a) lies on the straight line : $y + 2x = 5$, then a =
 (a) 1 (b) -1 (c) 11 (d) zero

2 The following table is the frequency distribution of wages of 100 workers weekly :

Sets	50 –	60 –	70 –	80 –	90 –	Total
Frequency	5	15	30	40	10	100

- 1 Find the number of workers whose wages are less than 70 pounds weekly.
- 2 Graph the ascending cumulative frequency curve.

3 Find the S.S. in \mathbb{R} of each of the following :

- 1 $2\sqrt{2}x - 1 = 3$
- 2 $-5 \leq 2x - 3 < 7$ and represent the S.S. on the number line.

4 [a] Find the slope of \overleftrightarrow{AB} , where : A (-1, 3) and B (2, 5), is the point C (8, 1) $\in \overleftrightarrow{AB}$?

[b] If $X = [2, \infty[$ and $Y =]-2, 3[$, find using the number line :

- 1 $X \cap Y$ 2 $X \cup Y$ 3 $X - Y$

1 Choose the correct answer from the given ones :

1 The arithmetic mean of a frequency distribution equals

(a) $\frac{\text{sum of } (X \times f)}{\text{sum of } f}$

(b) $\frac{\text{sum of } (X + f)}{\text{sum of } f}$

(c) $\frac{\text{sum of } f \times \text{sum of } X}{\text{sum of } f}$

(d) $\text{sum of } (f + X) \times \frac{2}{\text{sum of } f}$

2 If the lower limit of a set is 15 and its centre is 20 , then its upper limit is

(a) 5

(b) 15

(c) 35

(d) 25

3 The arithmetic mean of the values : 18 , 23 , $2k - 1$, 29 , k is 18 , then k =

(a) 1

(b) 7

(c) 29

(d) 90

4 The slope of any straight line parallel to X-axis is

(a) zero

(b) undefined.

(c) 1

(d) - 1

5 $\sqrt{a} + \sqrt{18} = 4\sqrt{2}$ if a =

(a) $\sqrt{2}$

(b) zero

(c) 2

(d) 3

6 The conjugate of the number : $\sqrt{2} - \sqrt{3}$ is

(a) $\sqrt{2} + \sqrt{3}$

(b) $\sqrt{3} - 2$

(c) $\sqrt{2} - 3$

(d) $-\sqrt{2} + \sqrt{3}$

7 If the arithmetic mean of the lengths of a triangle equals 12 cm.
 , then its perimeter = cm.

(a) 4

(b) 36

(c) 24

(d) 48

8 The mean of the values : $\sqrt{5}$ and $\sqrt{45}$ is

(a) $\sqrt{5}$

(b) $2\sqrt{5}$

(c) $3\sqrt{5}$

(d) $4\sqrt{5}$

2 The following table shows the frequency distribution of extra wages weekly for 100 workers in a factory :

Extra wages in pounds	20 –	30 –	40 –	50 –	X –	70 –
Number of workers	10	k	22	26	20	8

1 Calculate the value of each of X and k

2 Find the arithmetic mean of this distribution.

3 [a] A right circular cylinder of volume is 924 cm^3 and its height 6 cm.

Calculate the diameter length of its base ($\pi = \frac{22}{7}$)

[b] If $X = \frac{4}{\sqrt{7} - \sqrt{3}}$, $y = \frac{4}{\sqrt{7} + \sqrt{3}}$, put X and y in the simplest form

, then find the value of : $X^2 y^2$

Accumulative test 17 till lesson 4 – unit 3

1 Choose the correct answer from the given ones :

- 1 The median of the values : 8 , 4 , 5 , 3 and 7 is
(a) 8 (b) 5 (c) 3 (d) 7
- 2 The median of the values : 34 , 23 , 25 , 40 , 22 and 4 is
(a) 22 (b) 23 (c) 24 (d) 25
- 3 The order of the median of the values : 5 , 7 , 6 , 4 and 8 is
(a) third. (b) fourth. (c) fifth. (d) sixth.
- 4 If the order of the median of a set of values is the fourth , then the number of these values equals
(a) 3 (b) 5 (c) 7 (d) 9
- 5 The arithmetic mean of five numbers is 7 , then the sum of these numbers equals
(a) 12 (b) 35 (c) 21 (d) 18
- 6 (3 , 2) does not satisfy the relation
(a) $y + x = 5$ (b) $3y - x = 3$ (c) $y + x = 7$ (d) $2y - x = 1$
- 7 The volume of the cuboid whose dimensions , are $\sqrt{2}$ cm. , $\sqrt{5}$ cm. and $\sqrt{10}$ cm. is cm^3 .
(a) 20 (b) 100 (c) 50 (d) 10
- 8 The intersection point of the ascending and descending cumulative curves is (30 , 50) , then the sum of frequencies is
(a) 30 (b) 50 (c) 100 (d) 60

2 [a] Graph the relation : $y = 2 - x$

[b] The following table shows a frequency distribution :

Sets	20 –	30 –	40 –	50 –	60 –	70 –	Total
Frequency	10	k	22	25	20	8	100

Find : 1 The value of k

2 The median using the descending cumulative frequency.

3 [a] Find the S.S. of the inequality : $-3 \leq 2 - 5x \leq 12$ where $x \in \mathbb{R}$

[b] If $X =]3 , 7]$, $Y = [5 , \infty[$ by using the number line find :

1 $X \cap Y$

2 $X \cup Y$

3 $X - Y$

Accumulative test

till lesson 5 – unit 3

1 Choose the correct answer from the given ones :

- 1 The most common value or the most repeated value of a set of values is . . .
(a) the arithmetic mean. (b) the median.
(c) the mode. (d) the range.
- 2 The mode of the values : 3 , 4 , 5 , 4 , 3 , 4 , 7 is
(a) 3 (b) 4 (c) 5 (d) 7
- 3 The mode of the values : 11 , 8 , 3 $x + 2$, 11 , 5 is 11 , then $x =$
(a) 2 (b) 1 (c) 4 (d) 3
- 4 The arithmetic mean of the values : k , $-k$, $3k$ equals
(a) $3k$ (b) $2k$ (c) $-k$ (d) k
- 5 If $(k, 2k)$ satisfies the relation : $3x - y = 1$, then $k =$
(a) 1 (b) -1 (c) $\frac{1}{2}$ (d) 5
- 6 $\sqrt{4} - \sqrt[3]{8} =$
(a) 4 (b) -2 (c) zero (d) -4
- 7 If the volume of a sphere is $36\pi \text{ cm}^3$, then its radius length =
(a) 3 (b) $\sqrt{3}$ (c) $\sqrt[3]{3}$ (d) 6
- 8 The mode of the values : 8 , $\sqrt{8}$, $\sqrt[3]{8}$, $2\sqrt{2}$ is
(a) 8 (b) $\sqrt{2}$ (c) 2 (d) $2\sqrt{2}$

2 [a] Find the S.S. of the equation : $\sqrt{7}x + 1 = 8$ in \mathbb{R}

[b] Reduce to the simplest form : $(\sqrt{5} - \sqrt{2})^2 + \sqrt{40}$

3 [a] Find the value of y such that the straight line passing through the two points $(3, 4)$ and $(2, y)$ is parallel to the x -axis.

[b] The following table shows the frequency distribution with equal range sets for the weekly wages of 100 workers in a factory :

Sets of wages in L.E.	70–	80–	90–	100	x –	120–	130–
Number of workers	10	13	$k - 4$	20	16	14	11

Find : 1 The value of each of x and k

2 The mode of wages in L.E. by using the histogram.

-
- 12 The sum of lengths of all edges of a cube is 48 cm. , then its volume is

- 13 The volume of the sphere whose diameter length is 2 cm. is $\pi \text{ cm}^3$
- 14 If the volume of a sphere = $\frac{9}{2} \pi \text{ cm}^3$, then its diameter length = cm.
- 15 The rectangle whose dimensions are $(3 - \sqrt{5})$ cm. and $(3 + \sqrt{5})$ cm. its perimeter = ..
- 16 The circumference of a circle is $4\sqrt{5} \pi$ cm. , then its area is cm^2
- 17 $\sqrt{9+16} = 3 + \dots\dots\dots$
- 18 The additive inverse of the number $\sqrt[3]{-8}$ is
- 19 If $x = \sqrt{3} + 2$, $y = \sqrt{3} - 2$, then $(xy, x+y) = (\dots\dots\dots, \dots\dots\dots)$
- 20 A right circular cylinder whose volume is $125 \pi \text{ cm}^3$, its height = its radius length , then its radius length is cm.
- 21 $] -2, 3] \cap \mathbb{R} = \dots\dots\dots$
- 22 $[-1, 2[\cap \mathbb{Z} = \dots\dots\dots$
- 23 $\mathbb{R}_- \cap [-3, 2[= \dots\dots\dots$
- 24 $\sqrt{a} + \sqrt{18} = 4\sqrt{2}$, if $a = \dots\dots\dots$

Third Essay questions

- 1 If $X = [-3, 2[$, $Y = [-1, 5]$, find using the number line :
 1 $X \cup Y$ 2 $X \cap Y$ 3 $X - Y$
- 2 If $A =]-\infty, 3[$, $B = [-2, 5]$
 , find using the number line : $B - A$, $A \cap B$, $A \cup B$ and \hat{A}
- 3 If $x = \sqrt{3} + 1$, $y = \frac{2}{\sqrt{3} + 1}$, find the value of : $\frac{xy}{x-y}$
- 4 If $x = \frac{1}{\sqrt{5} + 2}$, $y = \sqrt{5} + 2$, prove that : x and y are conjugate numbers
 , then find the value of : $x^2 y^2$ in its simplest form.
- 5 If $x = \sqrt{7} - \sqrt{5}$, $y = \frac{2}{\sqrt{7} - \sqrt{5}}$, find the value of : $x^2 + 2xy + y^2$

- 6 If $x = \sqrt{7} + \sqrt{5}$, $y = \frac{2}{x}$, prove that : x and y are conjugate numbers
 , then find the value of : $x^2 + xy + y^2$
- 7 If $x = \sqrt{4 + \sqrt{7}}$, $y = \sqrt{4 - \sqrt{7}}$, find : $(x + y)^2$ in the simplest form.
- 8 If $x = \frac{\sqrt{6} + \sqrt{5}}{\sqrt{6} - \sqrt{5}}$, prove that : $x + \frac{1}{x} = 22$
- 9 Find in \mathbb{R} the S.S. of the inequality : $5x - 3 < 2x + 9$
- 10 Find the solution set of the inequality in \mathbb{R} , then represent it on the number line :
 $5 - 3x > 11$
- 11 Find the solution set in \mathbb{R} , then represent it on the number line : $1 < 2x + 3 \leq 9$
- 12 Find the solution set in \mathbb{R} , then represent it on the number line : $\frac{x}{3} + 2 > 3$
- 13 Find in \mathbb{R} the solution set of the inequality : $4x + 3 > 5x + 2 > 4x$, then represent it on the number line.
- 14 Simplify to the simplest form : $\sqrt[3]{2} (\sqrt[3]{4} + 2) - 2 (\sqrt[3]{2} + 1)$
- 15 Simplify to the simplest form : $\sqrt{75} - 2\sqrt{27} + 3\sqrt{\frac{1}{3}}$
- 16 Simplify to the simplest form : $\sqrt[3]{81} + \sqrt[3]{24} - 3\sqrt[3]{\frac{1}{9}}$
- 17 Find in the simplest form : $\sqrt{12} + \sqrt[3]{54} - 2\sqrt{3} - \sqrt[3]{16}$
- 18 Find in the simplest form : $\sqrt{50} + \sqrt[3]{54} - 10\sqrt{\frac{1}{2}} - \sqrt[3]{16}$
- 19 Find in \mathbb{R} the solution set of the equation : $(x - 2)^3 = 125$
- 20 A sphere with volume $36\pi \text{ cm}^3$, find :
1 The radius length of the sphere. 2 The area of the sphere in terms of π
- 21 Find the height of a right circular cylinder whose height is equal to its base radius length and its volume is $27\pi \text{ cm}^3$

- 22 A right circular cylinder whose base radius length is $4\sqrt{2}$ cm. and its height is 9 cm.
Find its volume in terms of π .
-
- 23 A right circular cylinder whose height is 10 cm. and its base radius length is 7 cm.
Calculate its volume and its lateral area ($\pi = \frac{22}{7}$)
-
- 24 A metallic sphere , with diameter length 6 cm. has got melt and changed into a right circular cylinder with base radius length 3 cm. Find its height.
-
- 25 A metallic right circular cylinder whose base radius length is 3 cm. and its height is 4 cm.
has got melt and changed into a sphere. Find the radius length of this sphere.
-
- 26 Find the volume of a right circular cylinder of lateral area 440 cm^2
and height 10 cm. ($\pi = \frac{22}{7}$)

Important questions on Unit Two

First Multiple choice questions

- 1 Which of the following ordered pairs satisfies the relation : $2x + y = 5$?
(a) $(-1, 3)$ (b) $(1, 3)$ (c) $(3, 1)$ (d) $(2, 2)$

- 2 The ordered pair which does not satisfy the relation : $2x + y = 5$ is
(a) $(1, 3)$ (b) $(-1, 7)$ (c) $(3, 1)$ (d) $(4, -3)$

- 3 If $(5, 2)$ satisfies the relation : $x + 2y = c$, then $c =$
(a) 8 (b) 9 (c) 7 (d) 6

- 4 If the point $(k, 2k)$ satisfies the relation : $y + 2x = 8$, then $k =$
(a) 2 (b) 3 (c) 4 (d) 5

- 5 If the straight line which passes through the two points $(3, k)$ and $(4, 5)$ is parallel to the x -axis , then $k =$
(a) 3 (b) 4 (c) 5 (d) -5

- 6 The slope of the straight line which passes through the two points $(4, 5)$ and $(4, 8)$ is
(a) zero. (b) undefined. (c) $\frac{2}{5}$ (d) $\frac{4}{5}$

- 7 If $A(-3, 1)$ and $B(1, 3)$, then the slope of $\overrightarrow{AB} =$
(a) -1 (b) 2 (c) $\frac{1}{2}$ (d) 1

- 8 The relation : $2x + 7y = 14$ is represented by a straight line intersecting the x -axis at
(a) $(2, 0)$ (b) $(0, 2)$ (c) $(7, 0)$ (d) $(0, 7)$

- 9 The slope of the horizontal straight line is
(a) zero. (b) 1 (c) 2 (d) undefined.

- 10 Which of the following relations is represented by the x -axis ?
(a) $x = 0$ (b) $y = 0$ (c) $x = y$ (d) $y = -x$

Second Complete questions

- 1 The slope of the straight line passing through the two points $(-1, 4)$, $(0, 5)$ is ..

- 2 The slope of the straight line parallel to y-axis is

- 3 The slope of the straight line perpendicular to y-axis is

- 4 If the straight line passing through the two points $(3, 4)$ and $(2, y)$ is parallel to X-axis ,
then $y =$

- 5 The relation : $y = 5$ is represented by a straight line parallel to axis and its
slope is

- 6 If $(-3, 2)$ satisfies the relation : $5x - ky = 7$, then $k =$

- 7 If the points A , B and C are collinear , then the slope of \overline{AB} = the slope of

- 8 If the two ordered pairs $(a, 2)$ and $(3, b)$ satisfy the relation : $x + 2y = 3$
 , then $a =$ and $b =$

- 9 If $A = (3, y)$, $B = (6, 5)$ and the slope of \overline{AB} equals $\frac{2}{3}$, then $y =$

- 10 The relation : $8x + 3y = 24$ is represented graphically by a straight line intersecting
y-axis at the point

Third Essay questions

- 1 Represent the relation : $y = x + 2$ graphically.

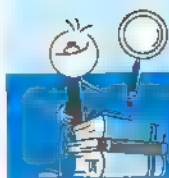

- 2 Represent the relation : $x + y = 3$ graphically , then find the point of intersection with
X-axis.

- 3 Graph the relation : $y = 2 - x$, then find the slope of the straight line.

- 4 Find the two points of intersection of the straight line : $2x + 3y = 12$ with the coordinate
axes.

- 5 **Prove that :** The points A $(-1, 3)$, B $(2, 4)$ and C $(5, 5)$ are collinear.

- 6 Are the points A (2 , - 1) , B (- 1 , 3) and C (2 , 3) collinear ?
-
- 7 If the slope of the straight line which passes through the two points (4 , 17) and (6 , k) is 4 , find the value of k
-
- 8 If (k , 2 k) satisfies the relation : $3x + y = 30$, find the value of k
-
- 9 Find the slope of \overleftrightarrow{AB} , where A (- 1 , 3) and B (2 , 5) , is the point C (8 , 1) $\in \overleftrightarrow{AB}$?
-
- 10 If A = (3 , 3) and B = (3 , 5) , prove that : $\overleftrightarrow{AB} \parallel y\text{-axis}$.

Important questions on Unit Three ?

First Multiple choice questions

- 1 The mode of the values : 3 , 4 , 10 , 4 is
(a) 3 (b) 4 (c) 20 (d) 10
- 2 The arithmetic mean of the numbers : 10 , 12 , 8 is
(a) 5 (b) 6 (c) 9 (d) 10
- 3 The median of the values : 34 , 23 , 25 , 40 , 22 , 4 is
(a) 22 (b) 23 (c) 24 (d) 25
- 4 The arithmetic mean of the values : $5 - x$, 5 , $5 + x$ is
(a) 5 (b) 81 (c) 13 (d) 3
- 5 If the arithmetic mean of the values : 5 , 7 , 8 , x is 6 , then $x =$...
(a) 8 (b) 5 (c) 7 (d) 4
- 6 If the order of the median of a set of values is the fourth , then the number of these values is
(a) 5 (b) 6 (c) 7 (d) 8
- 7 If the mode of the set of values : 15 , 11 , $5x$, 4 is 15 , then $x =$
(a) 3 (b) 4 (c) 5 (d) 15
- 8 If the mode of the set of values : 12 , 7 , $x + 1$, 7 , 12 is 7 , then $x =$
(a) 4 (b) 6 (c) 8 (d) 11
- 9 The centre of the first set of the sets : 7 - , 13 - , 19 - , 25 - is
(a) 6 (b) 7 (c) 10 (d) 13
- 10 If the lower limit of a set is 4 and the upper limit of the same set is 8 , then its centre is
(a) 2 (b) 4 (c) 6 (d) 8
- 11 If the lower limit of a set is 10 , its upper limit is x and its centre is 15 , then $x =$
(a) 10 (b) 5 (c) 20 (d) 8

- 12 If the arithmetic mean of five numbers is 8 , then the sum of these numbers is . . .
 (a) 13 (b) 16 (c) 40 (d) 64
-
- 13 The point of intersection of the ascending and descending curves determines on the set-axis.
 (a) the arithmetic mean (b) the median
 (c) the mode (d) the frequencies
-
- 14 If the point (16 , 30) is the point of intersection of the ascending and descending curves , then the median is
 (a) 16 (b) 23 (c) 60 (d) 30
-
- 15 If the order of the median of a frequency distribution is 50 , then the sum of frequencies is . . .
 (a) 50 (b) 25 (c) 100 (d) 5

Second Complete questions

- 1 The median of the values : 5 , 3 , 11 , 7 , 2 is
-
- 2 The mode of the values : 3 , 5 , 7 , 3 , 8 is
-
- 3 If the arithmetic mean of the values : 18 , 23 , 29 , $2k - 1$, k is 18 , then $k =$
-
- 4 The order of the median of the values : 7 , 6 , 5 , 8 , 4 is
-
- 5 The arithmetic mean is one of the measures of
-
- 6 If the mode of the values : 4 , 11 , 8 , $2X$ is 8 , then $X =$
-
- 7 If the point of intersection of the ascending and descending curves is (35 , 20) , then the sum of frequencies is
-
- 8 The arithmetic mean of the values : $2 - X$, 4 , 5 , $3 + X$, 1 is
-
- 9 If the order of the median of a set of values is the fifth and sixth , then the number of these values is . . .
-
- 10 The point of intersection of the ascending and descending curves determines on the set-axis.

Third Essay questions

- 1** The following frequency distribution shows the marks of 20 students in mathematics :

Sets	5 –	15 –	25 –	35 –	45 –	Total
Frequency	4	5	6	3	2	20

Calculate the mean.

- 2** The following table shows the frequency distribution of bonus of 100 workers :

Bonus	20	30 –	40 –	50 –	n	70 –
Number of workers	10	k	22	25	20	8

Find : **1** The value of each of n and k

2 The mean.

- 3** The following frequency distribution shows the marks of 35 students in mathematics :

Sets	2 –	4 –	6 –	8 –	10 – 12	Total
Frequency	5	8	10	8	4	35

Graph the histogram of that distribution and from the graph find the mode mark.

- 4** The following table shows the frequency distribution of the weights of 20 children in kg. :

Sets	5 –	15 –	25 –	35 –	45 –	Total
Frequency	3	4	7	4	2	20

Using the ascending or descending cumulative frequency curve , find the median of this distribution.

Final Revision

of Algebra and Statistics

Revision for the important rules of

Algebra and
Statistics

First Real numbers

Remember that

- $\mathbb{R} = \mathbb{Q} \cup \mathbb{Q}'$
- $\mathbb{R} - \mathbb{Q} = \mathbb{Q}'$
- $\mathbb{R}_+ \cap \mathbb{R}_- = \emptyset$
- $\pi \in \mathbb{Q}'$
- $\mathbb{Q} \cap \mathbb{Q}' = \emptyset$
- $\mathbb{R} - \mathbb{Q}' = \mathbb{Q}$
- $\mathbb{R} = \mathbb{R}_+ \cup \{0\} \cup \mathbb{R}_-$
- $\mathbb{R}^* = \mathbb{R} - \{0\}$

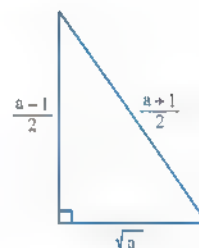

Remember The representing of the irrational number on the number line

Each irrational number can be represented by a point on the number line.

and to draw a line segment with length $= \sqrt{a}$ length unit where $a > 1$

Draw a right-angled triangle in which :

- The length of one side of the right-angle $= \frac{a-1}{2}$ length unit.
- The length of the hypotenuse $= \frac{a+1}{2}$ length unit.

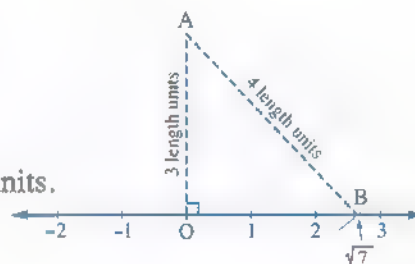

and we can apply this to represent the irrational number $\sqrt{7}$ on the number line as the following :

- From the point which represents the number zero on the number line , we draw a perpendicular line segment as \overline{OA} where $OA = \frac{7-1}{2} = 3$ length units.
- Using the compasses with a distance $= \frac{7+1}{2} = 4$ length units.

and centre at A , draw an arc to cut the number line on the right side of the point O at the point B

, then B is the point which represents $\sqrt{7}$ as in the figure.

- Notice that . To represent the number $(-\sqrt{7})$, we draw the arc which cuts the number line on its left side , not on its right side.
- Notice that : To represent the number $(1 + \sqrt{7})$, we follow the same previous steps but we draw the perpendicular line segment \overline{OA} from the point which represents the number 1 , not the number 0

Remember The operations on intervals

Intervals	Intersection	Union	Difference	Complement
$X = [-1, 5[$ $, Y =]-3, 2[$	 $X \cap Y = [-1, 2[$	 $X \cup Y =]-3, 5[$	 $X - Y = [2, 5[$ $, Y - X =]-3, -1[$	 $\hat{X} = \mathbb{R} - [-1, 5[$ $=]-\infty, -1[\cup [5, \infty[$
$X =]-\infty, 1[$ $, Y = [-2, 1[$	 $X \cap Y = [-2, 1[$	 $X \cup Y =]-\infty, 1[$	 $X - Y =]-\infty, -2[\cup \{1\}$ $, Y - X = \emptyset$	 $\hat{X} = [1, \infty[$
$X = [-1, 5]$ $, Y =]-1, 5[$	 $X \cap Y =]-1, 5[$	 $X \cup Y = [-1, 5]$	 $X - Y = \{-1, 5\}$ $, Y - X = \emptyset$	 $\hat{Y} = \mathbb{R} -]-1, 5[$ $=]-\infty, -1[\cup [5, \infty[$
$X =]-3, 4[$ $, Y = \{-3, 4\}$	 $X \cap Y = \{4\}$	 $X \cup Y = [-3, 4]$	 $X - Y =]-3, 4[$ $, Y - X = \{-3\}$	 $\hat{Y} = \mathbb{R} - \{3, 4\}$

Remember The operations on the square roots and the cube roots

The square roots

$$\textcircled{1} \sqrt{a} \times \sqrt{b} = \sqrt{ab}$$

$$\text{For Example : } \sqrt{3} \times \sqrt{12} = \sqrt{3 \times 12} = \sqrt{36} = 6$$

$$\textcircled{2} \frac{\sqrt{a}}{\sqrt{b}} = \sqrt{\frac{a}{b}} \text{ (where } b \neq 0 \text{)}$$

$$\text{For Example : } \frac{\sqrt{8}}{\sqrt{2}} = \sqrt{\frac{8}{2}} = \sqrt{4} = 2$$

$$\textcircled{3} \frac{\sqrt{a}}{\sqrt{b}} = \frac{\sqrt{a}}{\sqrt{b}} \times \frac{\sqrt{b}}{\sqrt{b}} = \frac{\sqrt{ab}}{b} \text{ (where } b \neq 0 \text{)}$$

$$\text{For Example : } \frac{\sqrt{2}}{\sqrt{5}} = \frac{\sqrt{2}}{\sqrt{5}} \times \frac{\sqrt{5}}{\sqrt{5}} = \frac{\sqrt{10}}{5}$$

The cube roots

$$\textcircled{1} \sqrt[3]{a} \times \sqrt[3]{b} = \sqrt[3]{ab}$$

$$\text{For Example : } \sqrt[3]{3} \times \sqrt[3]{9} = \sqrt[3]{3 \times 9} = \sqrt[3]{27} = 3$$

$$\textcircled{2} \frac{\sqrt[3]{a}}{\sqrt[3]{b}} = \sqrt[3]{\frac{a}{b}} \text{ (where } b \neq 0 \text{)}$$

$$\text{For Example : } \frac{\sqrt[3]{32}}{\sqrt[3]{4}} = \sqrt[3]{\frac{32}{4}} = \sqrt[3]{8} = 2$$

Example Simplify to the simplest form :

$$\textcircled{1} \sqrt{32} - \sqrt{72} + 6\sqrt{\frac{1}{2}}$$

$$\textcircled{2} \sqrt{18} - \frac{\sqrt{12}}{\sqrt{6}}$$

$$\textcircled{3} 5\sqrt{2} (2\sqrt{2} + \sqrt{12})$$

$$\textcircled{4} \sqrt[3]{54} + 6\sqrt[3]{16} - 6\sqrt[3]{\frac{1}{4}}$$

$$\textcircled{5} \sqrt[3]{72} + \sqrt[3]{\frac{1}{3}} + \sqrt[3]{-9}$$

Solution

$$\begin{aligned} \textcircled{1} \sqrt{32} - \sqrt{72} + 6\sqrt{\frac{1}{2}} &= \sqrt{2 \times 16} - \sqrt{2 \times 36} + 3 \times 2\sqrt{\frac{1}{2}} \\ &= 4\sqrt{2} - 6\sqrt{2} + 3\sqrt{\frac{1}{2} \times 4} = 4\sqrt{2} - 6\sqrt{2} + 3\sqrt{2} = \sqrt{2} \end{aligned}$$

$$\textcircled{2} \sqrt{18} - \frac{\sqrt{12}}{\sqrt{6}} = \sqrt{2 \times 9} - \sqrt{2} = 3\sqrt{2} - \sqrt{2} = 2\sqrt{2}$$

$$\begin{aligned} \textcircled{3} 5\sqrt{2} (2\sqrt{2} + \sqrt{12}) &= 5\sqrt{2} \times 2\sqrt{2} + 5\sqrt{2} \times \sqrt{12} = 10\sqrt{4} + 5\sqrt{24} = 10 \times 2 + 5\sqrt{4 \times 6} \\ &= 20 + 5 \times 2\sqrt{6} = 20 + 10\sqrt{6} \end{aligned}$$

$$\begin{aligned} \textcircled{4} \sqrt[3]{54} + 6\sqrt[3]{16} - 6\sqrt[3]{\frac{1}{4}} &= \sqrt[3]{2 \times 27} + 6\sqrt[3]{8 \times 2} - 3 \times 2\sqrt[3]{\frac{1}{4}} \\ &= 3\sqrt[3]{2} + 6 \times 2 \times \sqrt[3]{2} - 3 \times \sqrt[3]{8 \times \frac{1}{4}} = 3\sqrt[3]{2} + 12\sqrt[3]{2} - 3\sqrt[3]{2} = 12\sqrt[3]{2} \end{aligned}$$

$$\begin{aligned} \textcircled{5} \sqrt[3]{72} + \sqrt[3]{\frac{1}{3}} + \sqrt[3]{-9} &= \sqrt[3]{8 \times 9} + \sqrt[3]{\frac{1}{3} \times \frac{9}{9}} - \sqrt[3]{9} \\ &= 2\sqrt[3]{9} + \sqrt[3]{\frac{9}{27}} - \sqrt[3]{9} = 2\sqrt[3]{9} + \frac{1}{3}\sqrt[3]{9} - \sqrt[3]{9} = \frac{4}{3}\sqrt[3]{9} \end{aligned}$$

Remember: The two conjugate numbers

If a and b are two positive rational numbers :

then each of the two numbers $(\sqrt{a} + \sqrt{b})$ and $(\sqrt{a} - \sqrt{b})$

is conjugate to the other one and we find that :

- Their sum $= (\sqrt{a} + \sqrt{b}) + (\sqrt{a} - \sqrt{b}) = 2\sqrt{a} =$ twice the first term
- Their product $= (\sqrt{a} + \sqrt{b})(\sqrt{a} - \sqrt{b}) = (\sqrt{a})^2 - (\sqrt{b})^2 = a - b$
 $=$ The square of the first term – the square of the second term

For example : The number $(\sqrt{3} - \sqrt{2})$ its conjugate is $(\sqrt{3} + \sqrt{2})$, then we find that :

- Their sum $= 2\sqrt{3}$
- Their product $= 3 - 2 = 1$

! Remark

If we have a real number whose denominator is written in the form $(\sqrt{a} + \sqrt{b})$ or $(\sqrt{a} - \sqrt{b})$, we should put it in the simplest form by multiplying both the numerator and denominator by the conjugate of the denominator.

For example :

For writing the number $\frac{12}{\sqrt{6} - \sqrt{2}}$ in the simplest form , we multiply the two terms of the number by the conjugate of the denominator which is $(\sqrt{6} + \sqrt{2})$

$$\therefore \frac{12}{\sqrt{6} - \sqrt{2}} \times \frac{\sqrt{6} + \sqrt{2}}{\sqrt{6} + \sqrt{2}} = \frac{12(\sqrt{6} + \sqrt{2})}{6 - 2} = 3(\sqrt{6} + \sqrt{2}) = 3\sqrt{6} + 3\sqrt{2}$$

Important remarks from multiplying by inspection

- We know that : $(x - y)(x + y) = x^2 - y^2$

- And we know also :

$$(x + y)^2 = x^2 + 2xy + y^2$$

Then

$$\bullet x^2 + xy + y^2 = (x + y)^2 - xy$$

$$\bullet x^2 + y^2 = (x + y)^2 - 2xy$$

or

$$(x - y)^2 = x^2 - 2xy + y^2$$

Then

$$\bullet x^2 - xy + y^2 = (x - y)^2 + xy$$

$$x^2 + y^2 = (x - y)^2 + 2xy$$

Summary of rules of areas and volumes of some solids

The solid		The lateral area	The total area	The volume
The cube		$4\ell^2$	$6\ell^2$	ℓ^3
The cuboid		$2(x+y) \times z$	$2(xy + yz + zx)$	xyz
The cylinder		$2\pi r h$	$2\pi r h + 2\pi r^2$ $= 2\pi r(h+r)$	$\pi r^2 h$
The sphere			$4\pi r^2$	$\frac{4}{3}\pi r^3$

Remember that : The circumference of the circle $= 2\pi r$, the area of the circle $= \pi r^2$

Remember Solving an equation of the first degree in one unknown in \mathbb{R}

- Solving the equation of the first degree in one unknown in \mathbb{R} means finding the real number which satisfies this equation.

And the following example shows how to solve an equation of the first degree in one unknown.

Example

Find in \mathbb{R} the solution set of each of the following equations, then represent the solution on the number line :

① $\sqrt{5}x - 1 = 4$

② $x - \sqrt{3} = 2$

Solution

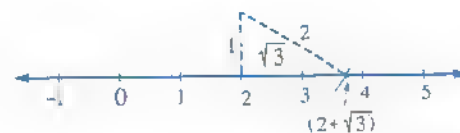

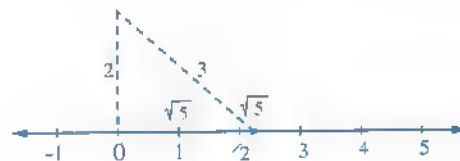

① $\because \sqrt{5}x - 1 = 4 \quad \therefore \sqrt{5}x = 4 + 1 = 5$

$$\therefore x = \frac{5}{\sqrt{5}} \times \frac{\sqrt{5}}{\sqrt{5}} = \frac{5\sqrt{5}}{5} = \sqrt{5}$$

$$\therefore \text{The S.S.} = \{\sqrt{5}\}$$

② $\because x - \sqrt{3} = 2 \quad \therefore x = 2 + \sqrt{3}$

$$\therefore \text{The S.S.} = \{2 + \sqrt{3}\}$$

Remember Solving an inequality of the first degree in one unknown in \mathbb{R}

- Solving the inequality means finding all values of the unknown which satisfy this inequality.
- The solution set of the inequality in \mathbb{R} will be written as an interval.

And the following example shows how to solve an inequality of the first degree in one unknown in \mathbb{R}

Example

Find in \mathbb{R} the solution set of each of the following inequalities, then represent the solution on the number line :

1 $2x + 6 < 2$

2 $5 - 4x \leq -3$

3 $3 < 3 - 5x < 13$

4 $x - 2 \geq 3x - 5$

Solution

1 $\because 2x + 6 < 2$

$\therefore 2x < 2 - 6$

$\therefore 2x < -4$

$\therefore x < \frac{-4}{2}$

$\therefore x < -2$

$\therefore \text{The S.S.} =]-\infty, -2[$

2 $\because 5 - 4x \leq -3$

$\therefore -4x \leq -8$

$\therefore x \geq \frac{-8}{-4}$

(Notice the change in the direction of the symbol of the inequality because we divided by a negative number)

$\therefore x \geq 2$

$\therefore \text{The S.S.} = [2, \infty[$

3 $\because 3 < 3 - 5x < 13$

(adding -3 to all sides)

$\therefore 0 < -5x < 10$ (dividing all sides by -5)

$\therefore 0 > x > -2$

(Notice the change in the direction of the symbol of the inequality because we divided by a negative number)

$\therefore \text{The S.S.} =]-2, 0[$

4 $\because x - 2 \geq 3x - 5$

$\therefore x - 3x \geq -5 + 2$

$\therefore -2x \geq -3$

$\therefore x \leq \frac{3}{2}$

$\therefore \text{The S.S.} =]-\infty, \frac{3}{2}]$

Second Relation between two variables

Remember The linear relation

It is a relation of the first degree between two variables X and y , it is in the form :

$aX + by = c$, where a , b and c are real numbers, a and $b \neq 0$ together.

And there is an infinite number of ordered pairs which satisfy this relation and it is enough to get three ordered pairs satisfying the relation at the graphical representation.

Example 1

Find three ordered pairs satisfying the relation : $3X - 2y = 6$

Solution

$$\therefore 3X - 2y = 6$$

• Putting $X = 0$

• Putting $X = 1$

• Putting $X = 2$

$$\therefore -2y = 6 - 3X$$

$$\therefore y = -3$$

$$\therefore y = -\frac{3}{2}$$

$$\therefore y = 0$$

$$\therefore y = \frac{3X - 6}{2}$$

$$\therefore (0, -3) \text{ satisfies the relation.}$$

$$\therefore \left(1, -\frac{3}{2}\right) \text{ satisfies the relation.}$$

$$\therefore (2, 0) \text{ satisfies the relation.}$$

Example 2

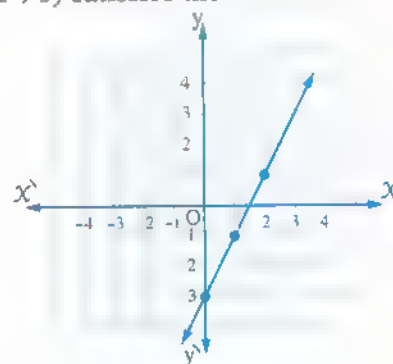

Represent graphically the relation : $2X - y = 3$

Solution

$$\therefore 2X - y = 3$$

$$\therefore y = 2X - 3$$

X	0	1	2
y	-3	-1	1

Remember The slope of the straight line

The slope of the straight line = $\frac{\text{the change in } y\text{-coordinates}}{\text{the change in } X\text{-coordinates}} = \frac{\text{the vertical change}}{\text{the horizontal change}}$

i.e. $S = \frac{y_2 - y_1}{x_2 - x_1}$, where $x_1 \neq x_2$

For example : The slope of the straight line passing through the two points $(2, 3)$, $(-5, 2)$ is :

$$S = \frac{2 - 3}{-5 - 2} = \frac{-1}{-7} = \frac{1}{7}$$

Notice that :

- The slope of the straight line parallel to X -axis = 0
- The slope of the straight line parallel to y -axis is undefined.

Third Statistics

Remember: The tables and cumulative frequency curves

The following frequency table shows the weekly wages in pounds of 50 workers in a factory :

Sets of wages	54 –	58 –	62 –	66 –	70 –	Total
No. of workers (frequency)	5	12	22	7	4	50

1 Forming the ascending cumulative frequency table and graphing the curve

The upper boundaries of sets	Frequency	Sets of wages	54 –	58 –	62 –	66 –	70 –
		Number of workers (frequency)	5	12	22	7	4
Less than 54	zero	Less than 54 = 0					
Less than 58	5	Less than 58 = 5 + 0 = 5					
Less than 62	17	Less than 62 = 5 + 12 = 17					
Less than 66	39	Less than 66 = 5 + 12 + 22 = 39					
Less than 70	46	Less than 70 = 5 + 12 + 22 + 7 = 46					
Less than 74	50	Less than 74 = 5 + 12 + 22 + 7 + 4 = 50					

"The ascending cumulative frequency table"

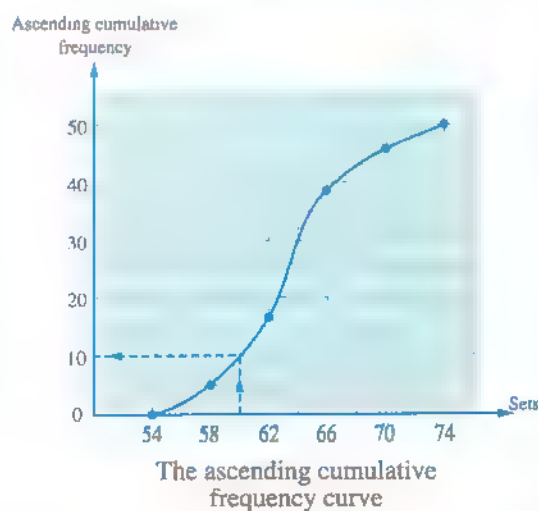

Notice that :

The ascending cumulative frequency begins with zero and ends at the total frequency.

- From the opposite graph , we can find the number of individuals which is less than a certain value.

For Example :

The number of workers whose wages are less than 60 pounds is 10 workers.

2 Forming the descending cumulative frequency table and graphing the curve

Sets of wages	54 –	58 –	62 –	66 –	70 –
Number of workers (frequency)	5	12	22	7	4

$$54 \text{ and more} = 5 + 12 + 22 + 7 + 4 = 50$$

$$58 \text{ and more} = 12 + 22 + 7 + 4 = 45$$

$$62 \text{ and more} = 22 + 7 + 4 = 33$$

$$66 \text{ and more} = 7 + 4 = 11$$

$$70 \text{ and more} = 4$$

$$74 \text{ and more} = 0$$

The lower boundaries of sets	Frequency
54 and more	50
58 and more	45
62 and more	33
66 and more	11
70 and more	4
74 and more	zero

"The descending cumulative frequency table"

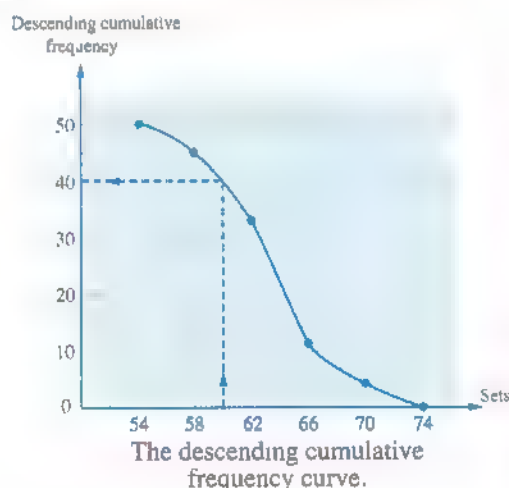

Notice that :

The descending cumulative frequency begins with the total frequency and ends with zero.

- From the opposite graph, we can find the number of individuals which is more than or equal to a certain value.

For Example :

The number of workers whose wages are 60 pounds or more is 40 workers.

Remember The measures of the central tendency

- ① The mean. ② The median. ③ The mode.

1 The mean
[a] The mean of a set of values (simple frequency distribution)

The mean of a set of values = $\frac{\text{The total of values}}{\text{Number of values}}$

For example : The mean of the numbers : 5 , 3 , 7 , 9 = $\frac{5+3+7+9}{4} = 6$

[b] The mean of a frequency distribution with sets
Example

The following table shows the distribution of the marks of 50 pupils in mathematics :

Sets	10 –	20 –	30 –	40 –	50 –	Total
Frequency	8	12	14	9	7	50

Find the mean of these marks.

Solution

- ① Determine the centres of sets according to the rule :

$$\text{The centre of a set} = \frac{\text{the lower limit} + \text{the upper limit}}{2}$$

\therefore The centre of the first set = $\frac{10 + 20}{2} = 15$... and so on.

Since the lengths of the subsets are equal and each of them = 10 therefore we consider the upper limit of the last set = 60

, then its centre = $\frac{50 + 60}{2} = 55$

- ② Form the following table :

Set	Centre of the set « X »	Frequency « f »	X × f
10 –	15	8	120
20 –	25	12	300
30 –	35	14	490
40 –	45	9	405
50 –	55	7	385
Total		50	1700

The mean = $\frac{\text{The sum of } (X \times f)}{\text{The sum of } f} = \frac{1700}{50} = 34 \text{ marks.}$

2 The median

[a] The median of a set of values

The median is the middle value in a set of values after arranging it ascendingly or descendingly, such that the number of values which are less than it is equal to the number of values which are greater than it.

We arrange the values ascendingly or descendingly

If the values number is odd, then

The median is the value lying in the middle exactly.

If the values number is even, then

The median

$$= \frac{\text{The sum of the two values lying in the middle}}{2}$$

For example :

If the values are

42, 23, 17, 30 and 20

We arrange them ascendingly as follows

17, 20, 23, 30, 42

The median = 23

For example :

If the values are

27, 13, 23, 24, 13, 21

We arrange them ascendingly as follows

13, 13, 21, 23, 24, 27

$$\text{The median} = \frac{21 + 23}{2} = 22$$

[b] Finding the median of a frequency distribution with sets graphically

For finding the median of a frequency distribution with sets graphically, do the following steps :

- ① Form the ascending or the descending cumulative frequency table, then draw the cumulative frequency curve of it.
- ② Find the order of the median = $\frac{\text{The total of frequency}}{2}$
- ③ Determine the point which represents the order of the median on the vertical axis, from this point, draw a horizontal straight line to cut the curve at a point, then from this point, draw a perpendicular to the horizontal axis to intersect it at a point which represents the median.

The following example shows how to find the median using the two curves (the ascending or the descending cumulative frequency curve).

Example

The following table shows the frequency distribution of marks of 50 students in math exam :

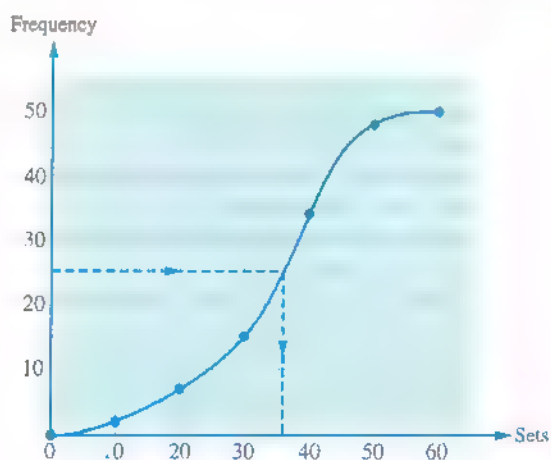

Sets of marks	0 -	10 -	20 -	30	40 -	50 -	Total
Number of students	2	5	8	19	14	2	50

Find the median mark of the student.

Solution

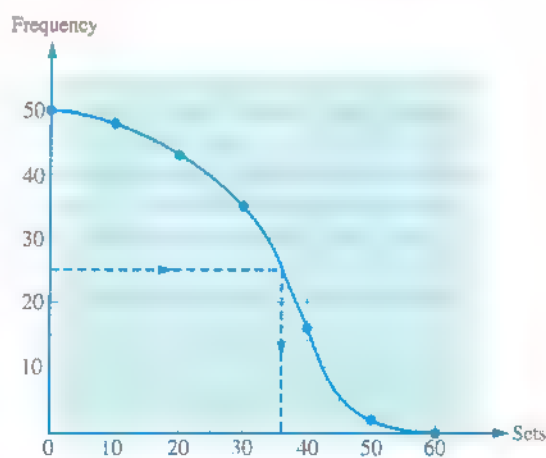

Using the ascending cumulative frequency curve :

The upper boundaries of sets	Frequency
Less than 0	0
Less than 10	2
Less than 20	7
Less than 30	15
Less than 40	34
Less than 50	48
Less than 60	50

Using the descending cumulative frequency curve :

The lower boundaries of sets	Frequency
0 and more	50
10 and more	48
20 and more	43
30 and more	35
40 and more	16
50 and more	2
60 and more	0

$$\therefore \text{The order of the median} = \frac{50}{2} = 25$$

\therefore From the two previous graphs , the median = 36 approximately

3 The mode

[a] The mode of a set of values

The mode of a set of values is the most common value in the set, or in other words, it is the value which is repeated more than any other values.

For example : The mode of the set of the values : 7 , 3 , 4 , 1 , 7 , 9 , 7 , 4 is 7

[b] The mode of a frequency distribution with sets

Example

The following is the frequency distribution of marks of 100 pupils in one of the exams :

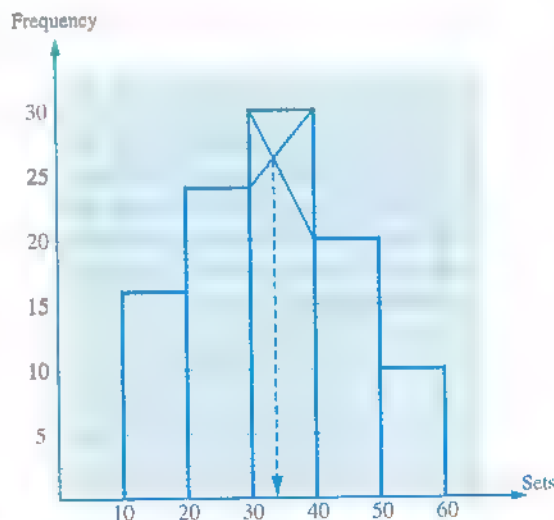

Sets of marks	10 –	20 –	30 –	40 –	50 –	Total
Number of pupils	16	24	30	20	10	100

Find the mode mark for these pupils.

Solution

You can find the mode of that distribution graphically using the histogram as follows :

- 1 Draw two orthogonal axes one of them is horizontal and the other is vertical to represent the frequency of each set.
- 2 Divide the horizontal axis into a number of equal parts with a suitable drawing scale to represent the sets.
- 3 Divide the vertical axis into a number of equal parts with a suitable drawing scale to represent the greatest frequency in the sets.
- 4 Draw a rectangle whose base is set (10 –) and its height equals the frequency (16)
- 5 Draw a second rectangle adjacent to the first one whose base is set (20 –) and its height equals the frequency (24)
- 6 Repeat drawing the remained adjacent rectangles till the last set (50 –)
- 7 Determine the set which has the greatest frequency then draw two lines as shown in the histogram to intersect at a point.

From this point , draw a vertical line to intersect the horizontal axis at a point which represents the value of the mode.

i.e. The mode mark is 34 approximately.

Final Examinations

on Algebra and Statistics

Model 1

Answer the following questions :

1 Complete the following :

- 1 The S.S. of the equation : $(X^2 + 3)(X^3 + 1) = 0$ is , $X \in \mathbb{R}$
- 2 If the lower boundary of a set is 10 and the upper boundary is X and its centre is 15 , then $X =$
- 3 $]-2, 2] \cup \{-2, 0\} =$
- 4 The cube whose volume is 8 cm^3 , then the sum of all its edge lengths is cm.
- 5 The multiplicative inverse of the number $(\sqrt{3} + \sqrt{2})$ is in the simplest form.

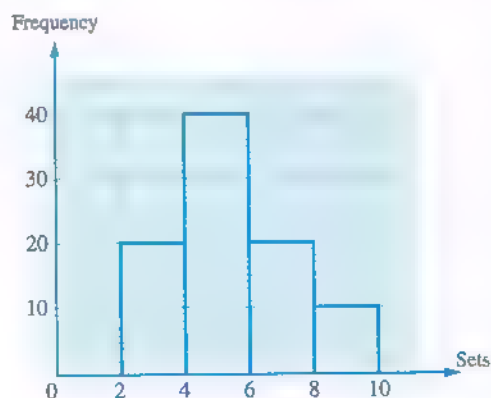

2 Choose the correct answer from the given ones :

- 1 If the radius length of a sphere is 6 cm. , then its volume is
(a) $6 \pi \text{ cm}^3$ (b) $36 \pi \text{ cm}^3$ (c) $72 \pi \text{ cm}^3$ (d) $288 \pi \text{ cm}^3$
- 2 If the point $(a, 1)$ satisfies the relation $X + y = 5$, then $a =$
(a) 1 (b) -4 (c) 4 (d) 5
- 3 $(2^3 \sqrt{2})^3 =$
(a) 4 (b) 8 (c) 16 (d) 40
- 4 The median of the values : 34 , 23 , 25 , 40 , 22 , 4 is
(a) 22 (b) 23 (c) 24 (d) 25
- 5 If the arithmetic mean of the values : 27 , 8 , 16 , 24 , 6 , k is 14 , then $k =$
(a) 3 (b) 6 (c) 27 (d) 84

6 In the opposite figure :

The value of the mode =

- (a) 4 (b) 5
(c) 6 (d) 40

3 [a] Find the value of : $\sqrt{18} + \sqrt[3]{54} - 3\sqrt{2} - \frac{1}{2}\sqrt[3]{16}$

[b] If $x = \frac{3}{\sqrt{5} - \sqrt{2}}$ and $y = \sqrt{5} - \sqrt{2}$

, prove that : x and y are two conjugate numbers.

4 [a] The area of a square is 1089 cm^2 . Find the length of its diagonal.

[b] Find the S.S. of the inequality : $\frac{3x+1}{6} < x+1 < \frac{x+4}{2}$ in \mathbb{R}

, then represent it on the number line.

5 [a] The radius length of the base of a right circular cylinder is $4\sqrt{2} \text{ cm}$. and its height is 9 cm . Find its volume in terms of π and if its volume equals the volume of a sphere , find the radius length of the sphere.

[b] Find the arithmetic mean of the following frequency distribution :

The sets	5 –	15 –	25 –	35 –	45 –	Total
Frequency	7	10	12	13	8	50

Model 2

Answer the following questions :

1 Complete the following :

1 The additive inverse of the number : $-\sqrt{3} - \sqrt{5}$ is

2 $(\sqrt{8} + \sqrt{2})(\sqrt{8} - \sqrt{2}) = \dots\dots\dots$

3 The conjugate of the number $\frac{2\sqrt{5} - 3\sqrt{2}}{\sqrt{2}}$ is

4 If the volume of a sphere is $\frac{9}{2} \pi \text{ cm}^3$, then its diameter length is cm.

5 $[3, 4] - \{3, 5\} = \dots\dots\dots$

2 Choose the correct answer from the given ones :

1 If the volume of a cube is 27 cm^3 , then the area of one of its faces is

(a) 3 cm^2

(b) 9 cm^2

(c) 36 cm^2

(d) 54 cm^2

2 If the mode of the values $4, 11, 8, 2x$ is 4 , then $x = \dots\dots\dots$

(a) 2

(b) 4

(c) 6

(d) 8

3 If the arithmetic mean of the values 18, 23, 29, $2k - 1$, k is 18, then $k = \dots$

- (a) 1 (b) 7 (c) 29 (d) 90

4 If the lower limit of a set is 4 and the upper limit is 8, then its centre is \dots

- (a) 2 (b) 4 (c) 6 (d) 8

5 A right circular cylinder the radius length of its base is r cm. and its height equals its diameter length, then its volume = $\dots \text{cm}^3$

- (a) πr^3 (b) πr^2 (c) $2\pi r^3$ (d) $2r^3$

6 The solution set of the equation : $x(x^2 - 1) = 0$, $x \in \mathbb{R}$ is \dots

- (a) $\{0\}$ (b) $\{1\}$ (c) $\{-1\}$ (d) $\{0, -1, 1\}$

3 [a] Reduce to the simplest form : $\frac{\sqrt{3}}{\sqrt{5}-\sqrt{3}} + \frac{\sqrt{5}}{\sqrt{5}+\sqrt{3}}$

[b] Prove that : $\sqrt[3]{128} + \sqrt[3]{16} - 2\sqrt[3]{54} = 0$

4 [a] Find the S.S. of the inequality : $-2 < 3x + 7 \leq 10$ in \mathbb{R} , then represent the interval of solution on the number line.

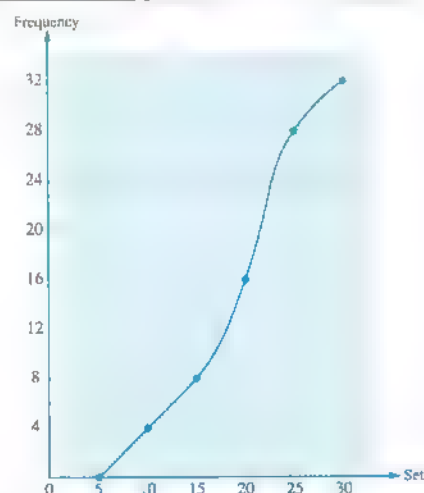

[b] If $x = \sqrt{2} + \sqrt{3}$, find the value of : $x^4 - 2x^2 + 1$

5 [a] The opposite graph represents the marks of 32 pupils in an exam.

Complete :

The median mark = \dots

[b] Find the arithmetic mean of the following frequency distribution :

The sets	5 -	15 -	25 -	35 -	45 -	Total
Frequency	4	5	6	3	2	20

Model for the merge students

Answer the following questions :

1 Complete each of the following :

- 1 The conjugate of the number $\sqrt{3} + \sqrt{2}$ is
- 2 $\sqrt{18} + \sqrt{54} - 3\sqrt{2} = \dots\dots\dots$
- 3 The mode for the numbers : 3 , 5 , 3 , 4 , 3 is
- 4 The median of the values : 2 , 3 , 5 , 7 , 9 is
- 5 The solution set of the equation : $x^2 + 9 = 0$ in \mathbb{R} is

2 Choose the correct answer from those given :

- 1 The arithmetic mean for the values : 9 , 6 , 5 , 14 , 1 is
 (a) 7 (b) 3 (c) 5 (d) 9
- 2 The simplest form of the expression : $(\sqrt{3} - \sqrt{2})(\sqrt{3} + \sqrt{2})$ is
 (a) $\sqrt{3}$ (b) 1 (c) $\sqrt{2}$ (d) $2\sqrt{3}$
- 3 The additive inverse of the number $-\sqrt{5}$ is
 (a) $\sqrt{5}$ (b) 5 (c) $\sqrt{2}$ (d) -5
- 4 $[3, 5] - \{3, 5\} = \dots\dots\dots$
 (a) $]3, 5[$ (b) $[3, 5[$ (c) \emptyset (d) $]3, 5]$
- 5 A cube is of volume 64 cm^3 , then its edge length is cm.
 (a) 4 (b) 8 (c) 16 (d) 64

3 Match from the column (A) to the suitable one from the column (B) :

(A)	(B)
1 The S.S. of the equation : $x^2 - 25 = 0$ in \mathbb{R} is	$[0, 2]$
2 $[-3, 2] \cap [0, 2] = \dots\dots\dots$	7
3 If the order of the median is fourth , then the number of values is	$\{5, -5\}$
4 $\sqrt{3}$ is an number.	
5 The S.S. of the inequality : $3 \leq x \leq 7$ on the number line is	irrational

4 Put (✓) for the correct statements and (✗) for the incorrect ones :

- 1 The arithmetic mean of a set of values = sum of values \div its number. ()
- 2 If $x = \sqrt{13} - \sqrt{7}$, $y = \sqrt{13} + \sqrt{7}$, then x , y are two conjugate numbers. ()
- 3 The irrational number $\sqrt{7}$ lies between 2 and 3 ()
- 4 $\sqrt{75} - 2\sqrt{27} = 7\sqrt{3}$ ()
- 5 The simplest form of the number $\frac{1}{\sqrt{5}}$ is $\frac{\sqrt{5}}{5}$ ()

5 [a] Complete : If the lower limit of a set is 4 and the upper limit is 8

, then its centre = $\frac{\dots + \dots}{2} = \dots$

[b] Complete the following table to obtain the arithmetic mean of the following frequency distribution :

Sets	5 –	15 –	25 –	35 –	45 –	Total
Frequency	7	10	12	13	8	50

Sets	The centre of the set « x »	Frequency « f »	$x \times f$
5 –	10	7	$10 \times 7 = 70$
15 –	20	10	$20 \times 10 = \dots$
25 –	$\dots \times 12 = \dots$
35 –	$\dots \times 13 = \dots$
45 –	$\dots \times 8 = \dots$
Total		50

The arithmetic mean = $\frac{\sum (x \times f)}{\sum (f)} = \frac{\dots}{\dots} = \dots$

Some Schools Examinations on

Algebra and
Statistics

Cairo Governorate

El-Wahdy Educational Admini.
Secondary Schools Language Exams

Answer the following questions :

1 Choose the correct answer :

- 1 Let A (3 , 5) and B (5 , - 1) , then the slope of \overrightarrow{AB} =
 (a) $-\frac{1}{3}$ (b) $\frac{1}{3}$ (c) 3 (d) - 3
- 2 The solution set of the equation : $x^2 - 9 = 0$ in \mathbb{R} is
 (a) \emptyset (b) $\{3, -3\}$ (c) $\{3\}$ (d) $\{-3\}$
- 3 $4.274 \approx$ (to the nearest 0.1)
 (a) 4 (b) 4.2 (c) 4.3 (d) 4.27
- 4 The mode for the values : 3 , 5 , 3 , 4 , 3 is
 (a) 4 (b) 3 (c) 5 (d) 18
- 5 If the point (k , 2) satisfies the equation : $x + y - 6 = 0$, then k =
 (a) 4 (b) - 4 (c) 6 (d) - 6
- 6 The lower limit of a set is 4 and the upper limit is 8 , then its centre is
 (a) 2 (b) 4 (c) 6 (d) 8

2 Complete :

- 1 The conjugate of the number $\frac{4}{\sqrt{6}-\sqrt{2}}$ is
- 2 $[-3, 2] \cup]1, 4[=$
- 3 The additive inverse of the number $-5 + \sqrt{3}$ is
- 4 A sphere , its diameter length is 6 cm. , then its volume is cm^3
- 5 $[-1, 5] -]-1, 5[=$

3 [a] Prove that : $\sqrt{18} + \sqrt{32} - 3\sqrt{2} - \frac{1}{2}\sqrt{8} = 3\sqrt{2}$

[b] If $x = \sqrt{5} - \sqrt{2}$, $y = \frac{3}{\sqrt{5} - \sqrt{2}}$

, prove that : x and y are conjugate to each other , then find the value of :

1 $x + y$

2 xy

4 [a] Represent graphically the linear relation : $y = 2 - x$

[b] Find the solution set of the inequality :

$-2 < 3x + 7 < 10$ in \mathbb{R} , then represent the S.S. on the number line.

- 5 [a] Find the volume of a right circular cylinder of height 10 cm. and its base radius length is 7 cm.

[b] Find the arithmetic mean of the following frequency distribution :

Sets	0 –	10 –	20 –	30 –	40 –	Total
Frequency	4	5	6	3	2	20

Answer the following questions :

1 Choose the correct answer :

- 1 The solution set of the equation : $X(X^2 - 1) = 0$ in \mathbb{R} is
- (a) $\{0\}$ (b) $\{1\}$ (c) $\{-1\}$ (d) $\{0, -1, 1\}$
- 2 If the arithmetic mean of the values : 18 , 23 , 29 , k is 18 , then k =
- (a) 4 (b) 7 (c) 2 (d) 9
- 3 If the lower limit of a set is 4 and the upper limit is 8 , then its centre is
- (a) 2 (b) 4 (c) 6 (d) 8
- 4 If the radius length of a sphere is 6 cm. , then its volume is
- (a) $6\pi \text{ cm}^3$ (b) $36\pi \text{ cm}^3$ (c) $72\pi \text{ cm}^3$ (d) $288\pi \text{ cm}^3$
- 5 If the point (a , 1) satisfies the relation : $X + y = 5$, then a =
- (a) 1 (b) -4 (c) 4 (d) 5
- 6 $[3, 5] - \{3, 5\} = \dots\dots\dots$
- (a) $]3, 5]$ (b) $[3, 5[$ (c) \emptyset (d) $]3, 5[$

2 Complete each of the following :

- 1 The slope of the straight line parallel to X-axis is
- 2 $\sqrt[3]{64} = \sqrt{\dots\dots\dots}$
- 3 If the mode of the values : 12 , 7 , $X + 1$, 7 , 12 is 7 , then $X = \dots\dots\dots$
- 4 $[-2, 5[\cap \mathbb{R}^+ = \dots\dots\dots$
- 5 The multiplicative inverse of the number $\sqrt{10} - 3$ is

3 [a] If $X =]-1, 4]$ and $Y = [3, \infty[$, using the number line find each of the following :

- 1 $X \cup Y$ 2 $X - Y$ 3 $X \cap Y$

[b] If $x = \sqrt{3} + 1$ and $y = \frac{2}{\sqrt{3} + 1}$

[1] Prove that : x and y are conjugate.

[2] Find the value of : $\frac{x+y}{xy}$ in the simplest form.

4 [a] A right circular cylinder of base radius length 4 cm. and its height is 9 cm.

Find its volume in terms of π

[b] Find the slope of \overrightarrow{AB} where A (− 1 , 5) and B (2 , 6)

5 [a] Graph the relation : $y = 2x$

[b] From the following frequency distribution :

Sets	10 –	20 –	30 –	40 –	50 –	Total
Frequency	7	10	8	6	9	40

Find the mean.

Answer the following questions :

1 Choose the correct answer :

[1] $[2, 5] - \{2\} = \dots\dots\dots$

- (a) $[2, 5]$ (b) $]2, 5]$ (c) $[2, 5[$ (d) $]2, 5[$

[2] The multiplicative inverse of the number $\frac{\sqrt{3}}{6}$ is $\dots\dots\dots$

- (a) $\sqrt{3}$ (b) $2\sqrt{3}$ (c) $\frac{\sqrt{3}}{2}$ (d) $\sqrt{6}$

[3] If the volume of a cube is 27 cm^3 , then its edge length is $\dots\dots\dots$ cm.

- (a) 3 (b) 9 (c) $3\sqrt{3}$ (d) 54

[4] The slope of the straight line parallel to x -axis is $\dots\dots\dots$

- (a) 1 (b) undefined. (c) zero (d) − 1

[5] If (2 , k) lies on the straight line $y = 3x + 1$, then $k = \dots\dots\dots$

- (a) − 1 (b) 5 (c) 6 (d) 7

[6] The arithmetic mean of the values : 13 , 15 , 16 , 14 and 17 is $\dots\dots\dots$

- (a) 15 (b) 13 (c) 14 (d) 17

2 Complete the following :

- 1 If $\sqrt[3]{a} = \sqrt[3]{27}$, then $a = \dots\dots\dots$
- 2 The additive inverse of the number $\sqrt{7} - \sqrt{3}$ is $\dots\dots\dots$
- 3 If $A = (5, -3)$ and $B = (6, 2)$, then the slope of $\overleftrightarrow{AB} = \dots\dots\dots$
- 4 If the circumference of a circle is 44 cm., then its diameter length is $\dots\dots\dots$ cm.
 $(\pi = \frac{22}{7})$
- 5 The S.S. of the equation : $x^2 - 5 = 0$ in \mathbb{R} is $\dots\dots\dots$

3 [a] Prove that : $\sqrt[3]{128} + \sqrt[3]{16} - 2\sqrt[3]{54} = 0$

- [b] A right circular cylinder, if the radius length of its base is 6 cm. and its height is 10 cm., find the lateral area and the volume of it ($\pi = 3.14$)

4 [a] If $x = \sqrt{5} + \sqrt{3}$, $y = \frac{2}{\sqrt{5} + \sqrt{3}}$, find the value of : $(x + y)^2$

- [b] Find the S.S. of the following inequality in \mathbb{R} and represent it on the number line :
 $3x + 7 \leq 10$

5 [a] If $X =]-\infty, 3]$, $Y = [1, 5[$, find by using the number line :

1 $X \cap Y$

2 $X \cup Y$

- [b] Find the mode of the following frequency distribution :

Sets	0 -	4 -	8 -	12 -	16 -	Total
Frequency	4	6	12	10	8	40

Answer the following questions :**1 Choose the correct answer :**

- 1 The simplest form of $(\sqrt{3} - \sqrt{2})(\sqrt{3} + \sqrt{2})$ is $\dots\dots\dots$
 (a) $\sqrt{3}$ (b) 1 (c) $\sqrt{2}$ (d) $\sqrt[3]{3}$
- 2 The volume of a cube is 64 cm^3 , then its edge length is $\dots\dots\dots$ cm.
 (a) 4 (b) 8 (c) 16 (d) 64
- 3 The mean of the values : 34, 23, 25, 40, 22, 12 is $\dots\dots\dots$
 (a) 22 (b) 23 (c) 24 (d) 26

4 If the point $(k, 1)$ satisfies the relation : $x + y = 5$, then $k = \dots\dots\dots$

- (a) 1 (b) -4 (c) 4 (d) 5

5 $(2^3\sqrt{2})^3 = \dots\dots\dots$

- (a) 4 (b) 8 (c) 16 (d) 40

6 If the mode of the values : 4 , 11 , 8 , 2 x is 4 , then $x = \dots\dots\dots$

- (a) 2 (b) 4 (c) 6 (d) 8

2 Complete the following :

1 The multiplicative inverse of the number $\sqrt{10} - 3$ is

2 $[3, 5] -]3, 5[= \dots\dots\dots$

3 The median of the numbers : 41 , 19 , 15 , 30 , 20 is ..

4 $\sqrt{18} - \sqrt{2} = \dots\dots\dots$

5 If the slope of the straight line passing through $(2, k)$, $(3, -1)$ is 2 , then $k = \dots\dots\dots$

3 [a] Find in the simplest form : $\sqrt{18} + \sqrt{32} - 3\sqrt{2} - \frac{1}{2}\sqrt{8}$

[b] If $x = \sqrt{5} - \sqrt{2}$, $y = \frac{3}{\sqrt{5} - \sqrt{2}}$, prove that : x and y are two conjugate numbers.

4 [a] Represent graphically the linear relation : $y = 2 - x$

[b] Find the solution set of the inequality :

$-2 < 3x + 7 \leq 10$ in \mathbb{R} , then represent the S.S. on the number line.

5 [a] A right circular cylinder of base radius length 4 cm. and its height is 9 cm.
Find its volume in terms of π

[b] Find the arithmetic mean of the following frequency distribution :

Sets	5 -	15 -	25 -	35 -	45 -	Total
Frequency	7	10	12	13	8	50

5

Giza Governorate

Abo El-Nomros Zone
Mathematics Department

Answer the following questions :

1 Choose the correct answer :

1 The solution set of the inequality : $x + 2 \leq 0$ in \mathbb{R} is

- (a) $\{-2\}$ (b) $[2, \infty[$ (c) $] -\infty, -2]$ (d) \emptyset

2 $4 \in \dots\dots\dots$

- (a) $]4, 6[$ (b) $]0, 4]$ (c) $\{1, 5\}$ (d) $]1, 4[$

3 The slope of any straight line parallel to y-axis is

- (a) 2 (b) zero (c) 1 (d) undefined.

4 A cube of volume 216 cm^3 has a total area equal to cm^2

- (a) 6 (b) 36 (c) 144 (d) 216

5 The mode of the values : 2, 8, 6, 4, 6 is

- (a) 2 (b) 4 (c) 5 (d) 6

6 $\sqrt[3]{25} = \sqrt[3]{\dots\dots\dots}$

- (a) 5 (b) 15 (c) 125 (d) -5

2 Complete the following :

1 $] -2, 2] \cup \{-2, 0\} = \dots\dots\dots$

2 If $(k, 2)$ satisfies the relation : $x + 2y = 5$, then $k = \dots\dots\dots$

3 If the radius length of a sphere is 6 cm., then its volume is $\pi \text{ cm}^3$

4 $\mathbb{R} - \mathbb{Q} = \dots\dots\dots$

5 If the order of the median of some values is seven, then the number of these values is

3 [a] Find the solution set of the following equation in \mathbb{R} : $(2x + 3)(5x^2 - 10) = 0$

[b] Find in the simplest form : $\sqrt{72} + 2\sqrt{32} - 3\sqrt{2}$

[c] If $A =] -2, 1]$ and $B = [0, \infty[$, use the number line to find :

1 $A \cup B$

2 $A \cap B$

4 [a] Find the volume of the cuboid of dimensions 5 cm., 3 cm., 2 cm.

[b] If $x = \sqrt{5} + \sqrt{2}$, $y = \sqrt{5} - \sqrt{2}$, then find in the simplest form the value of : $\frac{x+y}{x-y-1}$

[c] Find the slope of the straight line which passes through the points (2, 5) and (3, 7)

5 [a] Graph the linear relation : $y - x = 2$

[b] Find the mean of the following frequency distribution :

Sets	8 -	12 -	16 -	20 -	24 -	Total
Frequency	4	10	16	12	8	50

Answer the following questions :

1 Choose the correct answer :

- 1** $\sqrt{50} - \sqrt{18} - \sqrt{2} = \dots\dots\dots$
 (a) $\sqrt{30}$ (b) $\sqrt{2}$ (c) 2 (d) $2\sqrt{2}$
- 2** $[2, 7] - \{2, 7\} = \dots\dots\dots$
 (a) $[1, 6]$ (b) $]2, 7[$ (c) \emptyset (d) $\{0\}$
- 3** The irrational number lying between 2 and 3 is $\dots\dots\dots$
 (a) $\sqrt{10}$ (b) $\sqrt{7}$ (c) 2.5 (d) $\sqrt{3}$
- 4** The multiplicative inverse of the number $\frac{\sqrt{3}}{6}$ is $\dots\dots\dots$
 (a) $-\frac{\sqrt{3}}{6}$ (b) $6\sqrt{3}$ (c) $2\sqrt{3}$ (d) $\sqrt{2}$
- 5** If the volume of a sphere is $562.5 \pi \text{ cm}^3$, then its radius length is $\dots\dots\dots$ cm.
 (a) 3 (b) 5.5 (c) 7.5 (d) 15
- 6** If A $(-1, 2)$ and B $(3, 2)$, then the slope of $\overline{AB} = \dots\dots\dots$
 (a) zero (b) $-\frac{1}{2}$ (c) $\frac{2}{3}$ (d) -2

2 Complete the following :

- 1** If the lower limit of a set is 8 and the upper limit is 14, then its centre is $\dots\dots\dots$
- 2** If $(-1, 5)$ satisfies the relation $3x + ky = 7$, then $k = \dots\dots\dots$
- 3** If $\frac{1}{x} = \sqrt{5} - 2$, then $x = \dots\dots\dots$
- 4** $(\sqrt{3} + \sqrt{2})^2 + (\sqrt{3} - \sqrt{2})^2 = \dots\dots\dots$
- 5** The solution set of the equation $\sqrt{2}x - 1 = 3$ in \mathbb{R} is $\dots\dots\dots$

3 [a] Find in \mathbb{R} the S.S. of : $-1 < 2x + 1 \leq 5$

[b] If $x = \frac{4}{\sqrt{7} - \sqrt{3}}$, $y = \sqrt{7} - \sqrt{3}$, then find the value of : $(x - y)^2$

4 [a] Simplify : $\sqrt{128} + \sqrt{16} - 2\sqrt{32}$

[b] Draw the graph of the relation : $x + y = 5$

5 [a] If $X = [-2, 3]$, $Y = [1, 5[$, find : **1** $X \cap Y$

2 $X \cup Y$

[b] Below is the frequency distribution of the weekly bonus of 100 workers in a factory :

Bonus	20 –	30 –	40	50 –	60 –	70	Total
No. of workers	10	k	22	26	20	8	100

1 Calculate the value of k

2 Calculate the mean.

Answer the following questions :

1 Choose the correct answer :

1 $\sqrt{8} - \sqrt{2} = \dots\dots\dots$

(a) $\sqrt{2}$

(b) $\sqrt{6}$

(c) $\sqrt{8}$

(d) $3\sqrt{2}$

2 The S.S. of the equation : $x^2 - 9 = 0$ in \mathbb{R} is $\dots\dots\dots$

(a) \emptyset

(b) $\{3\}$

(c) $\{-3\}$

(d) $\{3, -3\}$

3 The arithmetic mean of the values : 7 , 5 , 3 is $\dots\dots\dots$

(a) 5

(b) 3

(c) 7

(d) 15

4 The slope of any line parallel to X-axis is $\dots\dots\dots$

(a) 1

(b) 0

(c) -1

(d) undefined.

5 The additive inverse of the number 0 is $\dots\dots\dots$

(a) -1

(b) 5

(c) 0

(d) 1

6 The range of the values : 7 , 19 , 5 , 2 , 14 is $\dots\dots\dots$

(a) 17

(b) 5

(c) 7

(d) 49

2 Complete :

1 $4x \times 2x = \dots\dots\dots$

2 The volume of the sphere whose radius length is 3 cm. equals $\dots\dots\dots \pi \text{ cm}^3$

3 The mode of the values : 3 , 6 , 4 , 7 , 3 is $\dots\dots\dots$

4 The slope of the straight line passing through the two points (3 , 2) , (4 , 4) is $\dots\dots\dots$

5 The median of the values : 6 , 4 , 7 , 9 , 8 is $\dots\dots\dots$

3 [a] Find the S.S. of the equation : $2x^3 - 5 = 11$ in \mathbb{R}

[b] If $x = \sqrt{7} - \sqrt{3}$, $y = \sqrt{7} + \sqrt{3}$, find the value of : $\frac{y+x}{xy}$

- 4 [a] If $X = [-2, 3]$, $Y = [1, 5]$, find by using the number line :

1 $X \cup Y$

2 $X \cap Y$

- [b] A right circular cylinder whose base radius length is 5 cm. and its height is 7 cm.

Find its volume. $(\pi = \frac{22}{7})$

- 5 [a] Graph the straight line that represents the relation : $x + y = 5$

- [b] Find the arithmetic mean of the following distribution :

The sets	1 -	3 -	5 -	7 -	9 -	Total
Frequency	4	6	8	7	5	30

8 El-Kalyoubia Governorate

Answer the following questions :

- 1 Choose the correct answer :

- 1 The edge length of a cube vessel with capacity one litre is
 (a) 10 cm^3 (b) 1 cm. (c) 10 cm. (d) 1 dm^3
- 2 $[-7, 1] \cap [2, 5] = \dots\dots\dots$
 (a) $[1, 2]$ (b) $[-7, 5]$ (c) $[1, 2[$ (d) \emptyset
- 3 The volume of the sphere whose radius length is 6 cm. is cm^3
 (a) 6π (b) 36π (c) 72π (d) 288π
- 4 The median of the values : 7 , 8 , 9 , 6 and 5 is
 (a) 5 (b) 7 (c) 6 (d) 9
- 5 Fifth of $5^{20} = \dots\dots\dots$
 (a) 5^4 (b) 5^{10} (c) 5^{19} (d) 5^{21}
- 6 If $(2k, k)$ satisfies $2y + x = 16$, then $k = \dots\dots\dots$
 (a) 4 (b) 6 (c) 8 (d) 12

- 2 Complete each of the following :

- 1 If $\sqrt[3]{x} = 8$, then $x = \dots\dots\dots$
- 2 The mode of the values : 7 , 3 , 8 , 2 , 3 , 4 , 3 and 7 is
 3 The slope of the straight line parallel to y-axis is
 4 The number which has no multiplicative inverse is
 5 The degree of the expression : $3x^3 - 5x^2 + 7xy - 4$ is

3 [a] Find in \mathbb{R} the S.S. of : $(x - 2)^3 = 125$

[b] Find the volume of the right circular cylinder whose base circumference is 10π cm. and its height is 6 cm.

[c] Find in \mathbb{R} the S.S. of the inequality : $5 \leq 3x - 1 < 14$, then represent the solution set on the number line.

4 [a] Simplify to the simplest form : $\sqrt[3]{54} + 5\sqrt[3]{16} - 2\sqrt[3]{250}$

[b] If $X =]-\infty, 3]$ and $Y =]-1, \infty[$, find :

1 $X \cup Y$

2 $X - Y$

3 \bar{X}

[c] If $x = \frac{3}{\sqrt{6} - \sqrt{3}}$ and $y = \sqrt{6} - \sqrt{3}$, then find : $(x - y)(x + y)$

5 [a] Graph the relation : $y = 2x + 1$ and find the slope using the graph.

[b] Find the arithmetic mean of the following distribution :

The sets	5 -	15 -	25 -	35 -	45 -	Total
Frequency	4	5	6	3	2	20

Answer the following questions :

1 Choose the correct answer from those given :

1 $\sqrt{16} - \sqrt[3]{-64} = \dots\dots\dots$

(a) 8

(b) 0

(c) -8

(d) 4

2 The multiplicative inverse of $\frac{\sqrt{2}}{6}$ is $\dots\dots\dots$

(a) $\sqrt{2}$

(b) $2\sqrt{2}$

(c) $3\sqrt{6}$

(d) $3\sqrt{2}$

3 The solution set of the equation : $x^2 + 4 = 0$ in \mathbb{R} is $\dots\dots\dots$

(a) $\{-32\}$

(b) $\{2\}$

(c) \emptyset

(d) $\{4\}$

4 The arithmetic mean of the values : 6 , 12 , 18 , 4 is $\dots\dots\dots$

(a) 9

(b) 10

(c) 15

(d) 40

5 The volume of a cube is 64 cm^3 , then the perimeter of one face is $\dots\dots\dots$ cm.

(a) 4

(b) 8

(c) 16

(d) 64

6 If the lower limit of a set is 10 and the upper limit is 20 , then its centre is $\dots\dots\dots$

(a) 5

(b) 10

(c) 15

(d) 20

2 Complete each of the following to be true :

- 1 The slope of the straight line passing through the points (1 , 2) and (3 , 5) is
- 2 If the ordered pair (l , 3 l) satisfies the relation : $x + y = 12$, then $l =$
- 3 If the mode of the values : 5 , 9 , 5 , x , 9 is 9 , then $x =$
- 4 If three times of a number is 60 , then $\frac{1}{4}$ of this number is
- 5 The conjugate of the number $(\sqrt{3} - \sqrt{2})$ is

3 [a] Find in its simplest form : $\sqrt{18} + \sqrt{50} - 2\sqrt{8}$

[b] If $X =]-\infty , 5]$, $Y =]1 , 7]$, find using the number line :

1 $X \cap Y$

2 $Y - X$

4 [a] Find in \mathbb{R} the S.S. of the inequality : $-8 < 3x + 1 \leq 4$

[b] If $x = \sqrt{3} + \sqrt{2}$, $y = \frac{1}{\sqrt{3} + \sqrt{2}}$, find the value of : $\frac{x+y}{xy}$

5 [a] If $(-4 , a)$ satisfies the relation : $y = x + 2$, find the value of a

[b] Find the arithmetic mean of the following distribution :

Sets	5 -	15 -	25 -	35 -	45 -	Total
Frequency	4	5	6	3	2	20

Answer the following questions :

1 Choose the correct answer :

1 $\sqrt{9} - \sqrt[3]{-27} =$

(a) 6

(b) -3

(c) zero

(d) 9

2 The solution set of : $-x < 2$ in \mathbb{R} is

(a) $] -\infty , -2[$

(b) $] -2 , \infty[$

(c) $] 2 , \infty[$

(d) $[2 , \infty[$

3 The degree of the algebraic term : $-3xy^3$ is

(a) -3

(b) 3

(c) 4

(d) 2

4 If $(-3 , 2)$ satisfies the relation : $ky = 7 - x$, then $k =$

(a) -3

(b) 2

(c) 7

(d) 5

5 The number of ordered pairs satisfying the relation : $2y = 3x + 4$ is

- (a) 2 (b) 3 (c) 4 (d) infinite.

6 If $5x = 35$, $xy = 1$, then $y =$

- (a) $\frac{1}{35}$ (b) 35 (c) $\frac{1}{7}$ (d) 7

2 Complete :

1 The upper limit of a set is 5 and the lower limit is 3 , then the centre is

2 The slope of the straight line representing y-axis is

3 The mode of the values 3 , 6 , 1 , 3 , 9 is

4 The perimeter of a square is 8 cm. , then the length of its side is cm.

5 The sum of degrees of 5 pupils in history is 30 , then the mean is

3 [a] A right circular cylinder , the diameter length of its base is 6 cm. and its height is 9 cm.

Find :

- 1 The volume in terms of π 2 The lateral area in terms of π

[b] Find in \mathbb{R} the solution set of : $5 < 2x + 3 < 9$

4 [a] If $X =]-3, 2[$, $Y =]-1, 3[$, use the number line to find :

- 1 $X \cap Y$ 2 $X \cup Y$ 3 $X - Y$

[b] Find in the simplest form : $4\sqrt{12} + 2\sqrt{48} - \frac{2}{5}\sqrt{75}$

5 [a] Prove that the point $C(1, 2) \in \overline{AB}$ where $A(3, 6)$ and $B(4, 8)$

[b] The following table represents the marks of 20 pupils in science :

Marks	5 -	10 -	15 -	20 -	25 -	Total
Frequency	3	4	7	4	2	20

1 Draw the descending cumulative frequency curve.

2 Find the median.

11 El-Dakahlia Governorate

Answer the following questions :

1 Complete each of the following :

1 $[3, 8] - [3, 8[=$

2 The slope of the straight line passing through $(2, 3)$ and $(4, -9)$ is

- [3] If the lower boundary of a set is 8 and the upper boundary is 12 , then its centre is
- [4] The square with side length $\sqrt{7}$ cm. , its area = cm^2 .
- [5] If the mode of the values : 4 , 5 , 6 , $X + 3$ is 5 , then $X =$

2 Choose the correct answer from those given :

- [1] The multiplicative inverse of $\frac{\sqrt{2}}{6}$ is
 (a) $\sqrt{3}$ (b) $3\sqrt{2}$ (c) $\sqrt{6}$ (d) $\frac{\sqrt{2}}{2}$
- [2] The ordered pair satisfying the relation : $2X + y = 5$ is
 (a) $(-1, 3)$ (b) $(3, 1)$ (c) $(2, 2)$ (d) $(1, 3)$
- [3] $\sqrt{16 + 9} = 4 +$
 (a) 25 (b) 3 (c) 1 (d) 0
- [4] If the volume of a cube is 64 cm^3 , then its lateral area is .. cm^2 .
 (a) 4 (b) 16 (c) 64 (d) 96
- [5] If three times a number is 18 , then half this number is
 (a) 18 (b) 9 (c) 6 (d) 3
- [6] The intersection point of the ascending and descending cumulative curves determines the on the sets axis.
 (a) order of the median (b) median
 (c) mean (d) mode

- 3 [a] Find the S.S. of the inequality : $3X + 8 < 14$ in \mathbb{R} , then represent the interval of solution on the number line.**
- [b] Find three ordered pairs satisfying the relation : $y = 3 - 2X$, then represent graphically.**

4 [a] If $X = \frac{3}{\sqrt{5} - \sqrt{2}}$, $y = \sqrt{5} - \sqrt{2}$

- [1] Prove that : X and y are two conjugate numbers. [2] Find the value of : $\frac{X+y}{Xy}$**

- [b] A right circular cylinder , its volume is $250\pi \text{ cm}^3$, its height is 10 cm. Find :**

- [1] The length of its base radius. [2] Its lateral area in terms of π**

5 [a] Simplify to the simplest form : $\sqrt{125} + 2\sqrt[3]{81} - \sqrt{20} - \sqrt[3]{24}$

- [b] Find the arithmetic mean of the following distribution :**

Sets	2 -	4 -	6 -	8 -	10 -	Total
Frequency	2	1	3	3	1	10

Answer the following questions :

1 Choose the correct answer :

- 1 The slope of y-axis is
 (a) 0 (b) undefined. (c) -1 (d) 1
- 2 If x is the additive inverse of y , then $x + y = \dots\dots\dots$
 (a) -1 (b) 1 (c) 2 (d) 0
- 3 The mode of : 6 , 3 , 8 , 6 , 4 , 6 , 9 is
 (a) 6 (b) 3 (c) 8 (d) 9
- 4 $\emptyset \dots\dots\dots \{0\}$
 (a) \approx (b) \nsubseteq (c) \subset (d) \in
- 5 The mean of : 24 , 10 , 16 , 20 , 30 is
 (a) 16 (b) 10 (c) 20 (d) 25
- 6 If (3 , k) satisfies the relation : $y = 2x + 1$, then $k = \dots\dots\dots$
 (a) 7 (b) 6 (c) 24 (d) 9

2 Complete :

- 1 The median of : 20 , 7 , 8 , 16 , 9 is
- 2 If $x = 3 + \sqrt{5}$, $y = 3 - \sqrt{5}$, then $x - y = \dots\dots\dots$
- 3 The lower limit of a set is 10 and its upper limit is 14 , then the centre of this set is
- 4 The edge length of a cube is 5 cm. , then its volume is cm^3
- 5 The age of Ali now is x years and the age of his friend now is y years , then the sum of their ages after 5 years is $x + y + \dots\dots\dots$ years.

3 [a] Graph the relation : $x = -3$

[b] If A (3 , 5) , B (5 , 12) , find : The slope of \overrightarrow{AB}

[c] Simplify : $\sqrt{27} + 2\sqrt{12} - 2\sqrt{3}$

4 [a] The volume of a sphere is 38808 cm^3 Find its diameter length. ($\pi = \frac{22}{7}$)

[b] If $X = [2 , \infty[$, $Y = [-3 , 5[$, using the number line find :

1 $X \cup Y$

2 $X \cap Y$

3 $X - Y$

- 5 [a]** Find in \mathbb{R} the S.S. and represent it on the number line : $8 < 3x - 1 < 14$

[b] From the following table :

Sets	4 –	8 –	12 –	16 –	20 –	Total
Frequency	4	7	6	5	8	30

Find the mean.

Answer the following questions :

- 1** Choose the correct answer :

1 The multiplicative inverse of $\sqrt{3}$ is

- (a) $\sqrt{3}$ (b) $-\sqrt{3}$ (c) $\frac{\sqrt{3}}{3}$ (d) $\frac{3}{\sqrt{3}}$

2 The S.S. of the equation : $x^2 + 9 = 0$ in \mathbb{R} is

- (a) \emptyset (b) $\{3, -3\}$ (c) $\{3\}$ (d) $\{-3\}$

3 If $(k, 3)$ satisfies the relation : $y = 2x + 5$, then $k =$

- (a) 1 (b) -1 (c) 2 (d) 3

4 The volume of a cube is 27 cm^3 , then its lateral area is cm^2

- (a) 12 (b) 54 (c) 36 (d) 27

5 If $2x + 1 = 7$, then $3x =$

- (a) 6 (b) 9 (c) 12 (d) -12

6 The mean of the values : 3, 2, 4, 7 is

- (a) 2 (b) 3 (c) 7 (d) 4

- 2** Complete :

1 $3a^2b \times \dots = 12a^4b^2$

2 If the mode of the values : 6, 9, $x-2$, 10 is 6, then $x =$

3 $\{2, 7\} - \{7\} =$

4 The slope of the straight line parallel to x -axis is

5 The median of : 24, 20, 11, 36, 40 is

- 3 [a]** If $x = \sqrt{3} + \sqrt{2}$, $y = \frac{1}{\sqrt{3} + \sqrt{2}}$, find the value of : $\frac{x+y}{xy}$

[b] If the slope of the straight line passing through the two points A (4, k), B (3, 2) is 5, find the value of k

4 [a] Find in \mathbb{R} the S.S. of the inequality :

$-1 \leq 2x + 3 < 5$ and represent the S.S. on the number line.

[b] Simplify : $\sqrt{50} + 2\sqrt{18} - \sqrt{32} - 8\sqrt{\frac{1}{2}}$

5 [a] If the volume of a sphere is $\frac{500}{3} \pi \text{ cm}^3$, find the length of its diameter.

[b] Find the mean of the following frequency distribution :

Sets	5 -	15 -	25 -	35 -	45 -	Total
Frequency	4	5	6	3	2	20

14**El-Menia Governorate**Menia Directorate of Education
Matay G.L.S.

Answer the following questions :

1 Complete :

- 1** The multiplicative inverse of $\frac{\sqrt{2}}{6}$ is
- 2** The S.S. of the equation : $x^2 + 9 = 0$ in \mathbb{R} is
- 3** $(\sqrt{7} + 2)(\sqrt{7} - 2) = \dots\dots\dots$
- 4** Let A (-3 , 1) and B (2 , -5) , then the slope of $\overrightarrow{AB} = \dots\dots\dots$
- 5** $3, 6[\cup \{4, 5, 6\} = \dots\dots\dots$

2 Choose the correct answer :

- 1** The volume of a cube is 125 cm^3 , then its lateral area is cm^2
 (a) 5 (b) 10 (c) 100 (d) 125
- 2** $\sqrt{2} + \sqrt{8} = \dots\dots\dots$
 (a) 2 (b) $\sqrt{2}$ (c) $2\sqrt{2}$ (d) $3\sqrt{2}$
- 3** If (-2 , 1) satisfies $2x + ky = 1$, then $k = \dots\dots\dots$
 (a) 2 (b) 3 (c) 4 (d) 5
- 4** If $\sqrt{6} \in]x, x + 1[$, then $x = \dots\dots\dots$
 (a) 1 (b) 2 (c) 3 (d) 4
- 5** If the mode of the values : 11 , 7 , 9 , $x + 2$, 5 is 7 , then $x = \dots\dots\dots$
 (a) 3 (b) 5 (c) 7 (d) 9
- 6** If the lower limit of a set is 40 and the upper limit is 80 , then its centre is
 (a) 20 (b) 40 (c) 60 (d) 80

3 [a] Find in the simplest form : $\sqrt{48} - 2\sqrt{12} + 6\sqrt{\frac{1}{3}}$

[b] A sphere , its volume is $36\pi \text{ cm}^3$. Find the length of its diameter.

[c] If $a = \sqrt{5} - \sqrt{2}$, $b = \sqrt{5} + \sqrt{2}$, find the value of : $(a + b)^2$

4 [a] If $A =]-2, 3]$, $B = [1, 5]$, find in the form of an interval , using the number line :

1 $A \cap B$

2 $A \cup B$

[b] Prove that : $\sqrt{2}$ lies between 1.4 and 1.5

5 [a] Find the S.S. of each of the following in \mathbb{Q} :

1 $8x^3 - 20 = 7$

2 $-2 < 3x + 7 \leq 10$

[b] Find the arithmetic mean of the following frequency distribution :

The sets	0 –	4 –	8 –	12 –	16 –	Total
Frequency	2	10	8	7	3	30

Answer the following questions :

1 Choose the correct answer :

1 The slope of any line parallel to X -axis is

(a) 1

(b) undefined.

(c) -1

(d) zero

2 $[1, 3] - \{1, 3\} = \dots\dots\dots$

(a) $]1, 3[$

(b) $[1, 3[$

(c) $] -1, -3[$

(d) $] -1, 3[$

3 The irrational number lying between 2 and 1 is

(a) -3

(b) 1

(c) $\sqrt{3}$

(d) $\sqrt{5}$

4 The volume of a cuboid whose dimensions are $\sqrt{2} \text{ cm}$, $\sqrt{3} \text{ cm}$. and $\sqrt{6} \text{ cm}$. is

(a) 6 cm^3

(b) 36 cm .

(c) $6\sqrt{6} \text{ cm}$.

(d) $18\sqrt{2} \text{ cm}$.

5 If the lower limit of a set is 6 and the upper limit is 10 , then its centre is .

(a) 4

(b) 6

(c) 10

(d) 8

6 $(2^3\sqrt{2})^3 = \dots\dots\dots$

(a) 4

(b) 8

(c) 16

(d) 40

2 Complete the following :

1 $\sqrt[3]{125} = \sqrt{\quad \quad \quad}$

2 If $(-1, 4)$ satisfies the relation : $X + y = k$, then $k = \quad \quad \quad$

3 The edge length of a cube is 3 cm. , then the area of any one of its faces is $\quad \quad \quad$ cm²

4 $[2, 7[\cup \{2, 7\} = \quad \quad \quad$

5 The conjugate of $\sqrt{5} + \sqrt{2}$ is $\quad \quad \quad$

3 [a] Find in the simplest form : $\sqrt{18} + \sqrt{50} - \sqrt{54}$

[b] If $X = \frac{4}{3 - \sqrt{5}}$ and $y = 3 - \sqrt{5}$, prove that : X and y are conjugate numbers
 , then find the value of : $(X + y)^2$

4 [a] Find the S.S. of the inequality :

$-2 < 3X + 7 < 10$ in \mathbb{R} , then represent it on the number line.

[b] If $X = [-1, 4]$ and $Y = [2, 7]$, then find each of :

1 $X \cup Y$

2 $X \cap Y$

5 [a] If $(3m, 2m)$ satisfies the relation : $y = 2X - 8$, find the value of m

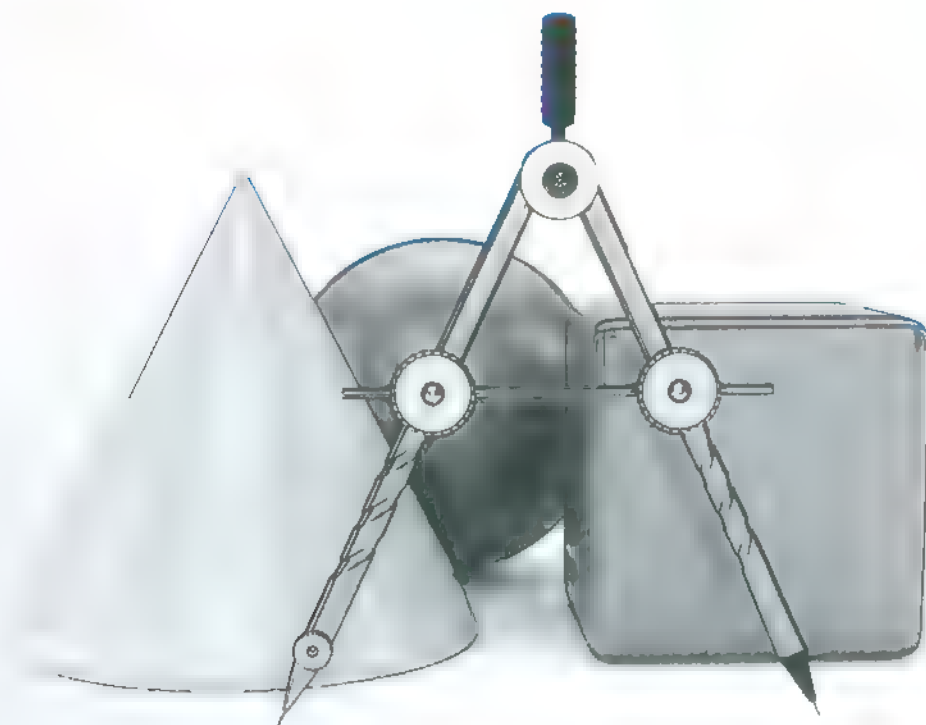

[b] The following table shows the frequency distribution of marks of 40 pupils in an exam :

Sets of marks	30 -	40 -	50 -	60 -	70 -	80 -	Total
Frequency	3	4	12	8	7	6	40

Find the mean mark.

Accumulative test

1

on lesson 1 – unit 4

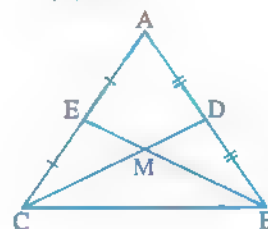

1 Choose the correct answer from the given ones :

- 1** The number of medians of the triangle is
 (a) 1 (b) 2 (c) 3 (d) 4
- 2** The point of concurrence of the medians of the triangle divides each median in the ratio from the vertex.
 (a) 2 : 1 (b) 1 : 2 (c) 3 : 1 (d) 3 : 2
- 3** If M is the point of intersection of the medians of $\triangle ABC$, \overline{AD} is a median, then $AD = \dots\dots\dots$
 (a) 2 AM (b) $\frac{2}{3}$ MD (c) $\frac{3}{2}$ AM (d) 4 MD
- 4** If \overline{AD} is a median in $\triangle ABC$, M is the point of intersection of the medians, $AM = 12$ cm., then $AD = \dots\dots\dots$ cm.
 (a) 8 (b) 4 (c) 18 (d) 9
- 5** The point of intersection of medians of the triangle divides each of them in the ratio 4 : from the base.
 (a) 2 (b) 8 (c) 1 (d) 4
- 6** In $\triangle XYZ$, \overline{XD} is a median, M is the point of intersection of the medians, then $XM \dots\dots\dots MD$
 (a) $>$ (b) $<$ (c) $=$ (d) \leq

7 In the opposite figure :

$BM = 6$ cm., then $ME = \dots\dots\dots$ cm.

- (a) 3 (b) 6
(c) 7 (d) 9

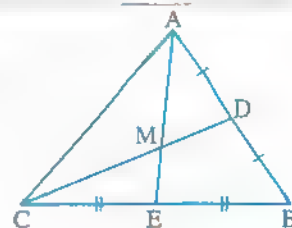

8 In $\triangle ABC$, \overline{AD} is a median, M is the point of intersection of its medians, then $(AM)^2 = \dots\dots\dots (AD)^2$

- (a) 2 (b) $\frac{3}{2}$ (c) $\frac{4}{9}$ (d) $\frac{1}{2}$

2 [a] In the opposite figure :

ABC is a triangle in which D, E are the midpoints of \overline{AB} , \overline{BC} respectively, $\overline{AE} \cap \overline{CD} = \{M\}$, if $AM = 4$ cm., $CD = 9$ cm.

Find : The length of each of \overline{AE} , \overline{MC}

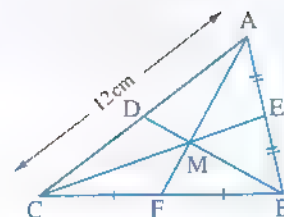

[b] In the opposite figure :

E is the midpoint of \overline{AB}

, F is the midpoint of \overline{BC} , $AC = 12$ cm.

Find with proof : The length of \overline{AD}

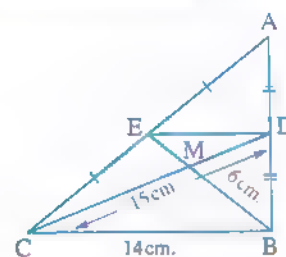

3 In the opposite figure :

M is the point of intersection of the medians of $\triangle ABC$

, $BM = 6$ cm. , $BC = 14$ cm. , $DC = 15$ cm.

Find : The perimeter of $\triangle MDE$

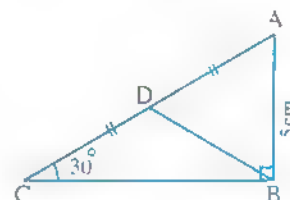

**1 Choose the correct answer from the given ones :**

- 1 The length of the side opposite to the angle of measure 30° in the right-angled triangle = the length of the hypotenuse.
(a) $\frac{1}{4}$ (b) $\frac{1}{2}$ (c) $\frac{1}{3}$ (d) $\frac{1}{5}$
- 2 If ABC is a right-angled triangle at B , $AB = 6$ cm. , $BC = 8$ cm. , then the length of the median drawn from B equals cm.
(a) 10 (b) 5 (c) 3 (d) 4

3 In the opposite figure :

ABC is a right-angled triangle at B
D is the midpoint of \overline{AC} , $m(\angle ACB) = 30^\circ$
AB = 5 cm. , then BD = cm.

- (a) 5 (b) 10 (c) 2.5 (d) 15
- 4 The point of intersection of medians of the triangle divides each median in the ratio from the base.
(a) 2 : 1 (b) 3 : 6 (c) 3 : 2 (d) 1 : 3
- 5 If \overline{BD} is a median in $\triangle ABC$, $BD = \frac{1}{2} AC$, then
(a) $m(\angle ABC) = 90^\circ$ (b) $m(\angle BAC) = 90^\circ$
(c) $m(\angle ABC) = 30^\circ$ (d) $m(\angle ACB) = 90^\circ$
- 6 If M is the point of intersection of the medians of $\triangle ABC$, D is the midpoint of \overline{BC} , then $MD : AD =$
(a) 1 : 2 (b) 2 : 3 (c) 1 : 3 (d) 3 : 2
- 7 If M is the point of intersection of the medians of $\triangle ABC$, \overline{AD} is a median of length 9 cm. , then $AM =$ cm.
(a) 6 (b) 3 (c) 4 (d) 2
- 8 A rectangle , its diagonals intersect at M , the length of its diagonal is 6 cm. , then the length of the median \overline{AM} is
(a) 1 cm. (b) 2 cm. (c) 3 cm. (d) 4 cm.

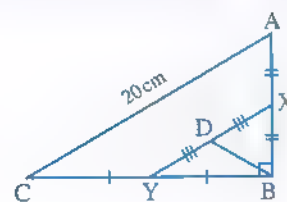

2 [a] In the opposite figure :

$m(\angle ABC) = 90^\circ$, X is the midpoint of \overline{AB}

, Y is the midpoint of \overline{BC}

, D is the midpoint of \overline{XY} , $AC = 20$ cm.

Find : The length of \overline{BD}

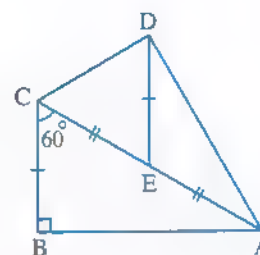

[b] In the opposite figure :

ABC is a right-angled triangle at B

, $m(\angle ACB) = 60^\circ$

, E is the midpoint of \overline{AC} , $DE = BC$

Prove that : $m(\angle ADC) = 90^\circ$

3 In the opposite figure :

ABC is a right-angled triangle at B

, $m(\angle C) = 30^\circ$, D is the midpoint of \overline{BC}

, E is the midpoint \overline{AC} , $\overline{AD} \cap \overline{BE} = \{M\}$

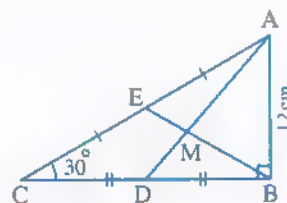

, if $AB = 12$ cm, $AD = 15$ cm.

Find with proof :

1 The length of \overline{AE}

2 The length of \overline{ME}

3 The perimeter of $\triangle AME$

1 Choose the correct answer from the given ones :

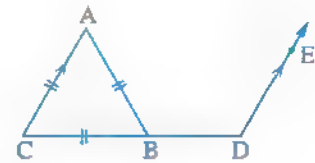

- 1 The measure of the exterior angle of the equilateral triangle equals
 (a) 60° (b) 90° (c) 120° (d) 180°

- 2 The two base angles of the isosceles triangle are
 (a) complementary. (b) congruent.
 (c) supplementary. (d) different.

3 In the opposite figure :

ABC is an equilateral triangle
 $\overrightarrow{DE} \parallel \overrightarrow{CA}$, then $m(\angle D) = \dots$

- (a) 100° (b) 60°
 (c) 120° (d) 150°

- 4 The point of intersection of the medians of the triangle divides each median in the ratio from the base.

- (a) 1 : 2 (b) 2 : 1 (c) 3 : 1 (d) 1 : 3

- 5 ABC is a right-angled triangle at B , $AC = 20$ cm. , D is the midpoint of \overline{AC}
 , then $BD = \dots$ cm.

- (a) 10 (b) 8 (c) 6 (d) 5

- 6 XYZ is an isosceles triangle in which $m(\angle Y) = 100^\circ$, then $m(\angle Z) = \dots$

- (a) 100° (b) 80° (c) 60° (d) 40°

- 7 If ΔXYZ is right-angled at Y , $m(\angle X) = 60^\circ$, $XZ = 10$ cm.
 , then $XY = \dots$ cm.

- (a) 10 (b) 6 (c) 8 (d) 5

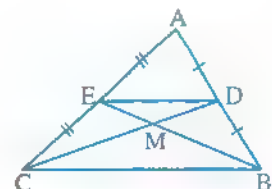

- 8 In ΔABC , if $AB = AC$, $m(\angle A) = 2 m(\angle B)$, then $m(\angle C) = \dots$

- (a) 30° (b) 45° (c) 60° (d) 90°

2 [a] In the opposite figure :

\overline{BE} , \overline{CD} are two medians in ΔABC intersect at point M
 , the perimeter of $\Delta MDE = 12$ cm.

Find : The perimeter of ΔMBC

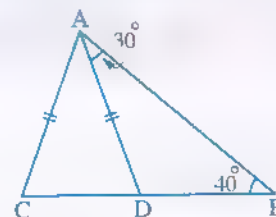

[b] In the opposite figure :

$$AD = AC, B \in \overline{CD}$$

$$, m(\angle B) = 40^\circ$$

$$, m(\angle BAD) = 30^\circ$$

Prove that : $AB = CB$

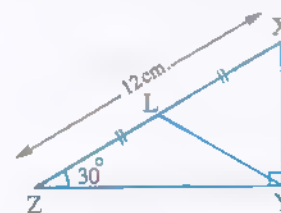

3 [a] In the opposite figure :

XYZ is a right-angled triangle at Y

, L is the midpoint of \overline{XZ} , $m(\angle Z) = 30^\circ$

, $XZ = 12$ cm.

Find : The perimeter of $\triangle XLY$

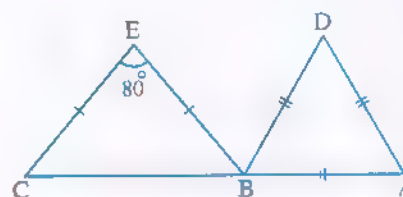

[b] In the opposite figure :

$B \in \overline{AC}$, $\triangle ABD$ is equilateral

, $EB = EC$, $m(\angle E) = 80^\circ$

Find : $m(\angle DBE)$

1 Choose the correct answer from the given ones :

- 1 If the measures of two angles in a triangle are 42° , 69° , then the triangle is
 (a) isosceles. (b) scalene. (c) equilateral. (d) otherwise.
- 2 If the length of the median drawn from the vertex of the right angle in the right-angled triangle equals the hypotenuse.
 (a) half (b) double (c) quarter (d) third
- 3 A right-angled triangle , the measure of one of its angles is 45° , then it is
 (a) isosceles triangle. (b) scalene triangle.
 (c) equilateral triangle. (d) otherwise.

4 In the opposite figure :

ABC is a triangle in which

$m(\angle B) = m(\angle C)$, then $x =$

(a) $\frac{2}{5}$

(b) $\frac{4}{5}$

(c) 2

(d) 4

5 If ABC is a triangle , $AB = BC$, then $\angle C$ is

(a) acute.

(b) right.

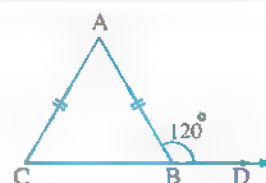

(c) obtuse.

(d) straight.

2 [a] In the opposite figure :

$AB = AC$, $m(\angle ABD) \approx 120^\circ$

Prove that : $\triangle ABC$ is equilateral.

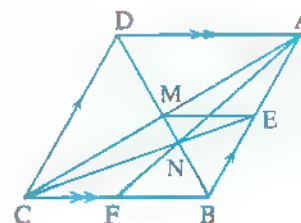

[b] In the opposite figure :

ABCD is a parallelogram its diagonals

intersect at M , if $N \in \overline{BM}$

where $BN = 2 NM$, $\overrightarrow{CN} \cap \overline{AB} = \{E\}$

Prove that : $EM = \frac{1}{2} BC$

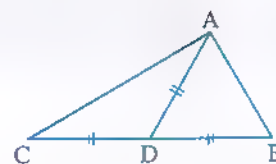

3 [a] In the opposite figure :

ABC is a triangle

, $AD = BD = CD$

Find : $m(\angle BAC)$

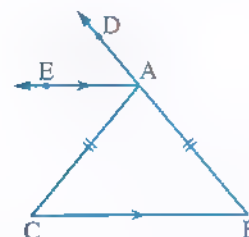

[b] In the opposite figure :

$D \in \overrightarrow{BA}$, $AB = AC$

, $\overrightarrow{AE} \parallel \overrightarrow{BC}$

Prove that : \overrightarrow{AE} bisects $\angle DAC$

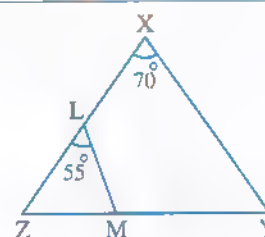

4 In the opposite figure :

$XZ = XY$, $m(\angle MLZ) = 55^\circ$

, $m(\angle X) = 70^\circ$

Prove that : $ML = MZ$

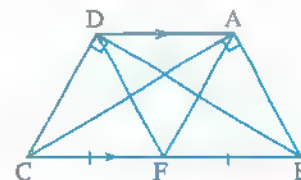

1 Choose the correct answer from the given ones :

- 1 The median of the isosceles triangle from the vertex angle bisects it and ... to the base.
(a) axis of symmetry (b) parallel (c) congruent (d) perpendicular
- 2 An isosceles triangle, the measure of one of its angles is 60° , then the number of its axes of symmetry is
(a) 4 (b) 3 (c) 2 (d) 1
- 3 The length of the hypotenuse in the right-angled triangle equals ... the length of the side opposite to the angle of the measure 30°
(a) $\frac{1}{2}$ (b) $\frac{1}{3}$ (c) 2 (d) 3
- 4 The number of medians of the isosceles triangle is
(a) zero (b) 1 (c) 2 (d) 3
- 5 If ABC is a triangle, $AB = AC$, $m(\angle B) = 50^\circ$, then $m(\angle A) =$
(a) 80° (b) 110° (c) 40° (d) 50°
- 6 The triangle which has no axes of symmetry is
(a) the isosceles triangle. (b) the scalene triangle.
(c) the equilateral triangle. (d) the right-angled triangle.
- 7 If \overleftrightarrow{AB} is the axis of symmetry of \overline{FD} , then $\frac{AD}{AF} =$
(a) zero (b) 1 (c) $\frac{1}{2}$ (d) 2
- 8 ABC is an equilateral triangle, X is the point of intersection of its axes of symmetry, \overleftrightarrow{AX} cuts \overline{BC} at D, if $DX = 5$ cm., then $AX =$
(a) 10 cm. (b) 15 cm. (c) 2.5 cm. (d) 7.5 cm.

2 [a] In the opposite figure :

\overline{AF} , \overline{DF} are two medians

Prove that : $AF = FD$

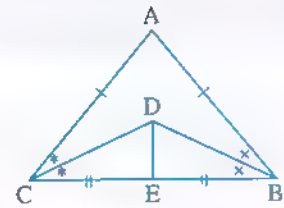

[b] In the opposite figure :

$AB = AC$, \overrightarrow{BD} bisects $\angle ABC$

, \overrightarrow{CD} bisects $\angle ACB$

, E is the midpoint of \overline{BC}

Prove that : $\overline{DE} \perp \overline{BC}$

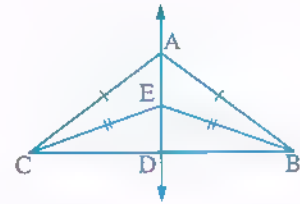

3 [a] In the opposite figure :

ABC is a triangle in which $AB = AC = 10$ cm.

, $BE = EC$, $BC = 16$ cm.

, $\overrightarrow{AE} \cap \overline{BC} = \{D\}$

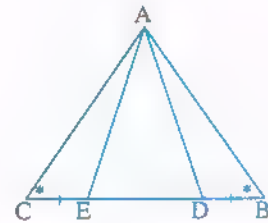

Find : The length of \overline{AD}

[b] In the opposite figure :

$BD = EC$, $m(\angle B) = m(\angle C)$

Prove that : $m(\angle ADE) = m(\angle AED)$

1 Choose the correct answer from the given ones :

1 If $x - z > y - z$, then x y

- (a) = (b) > (c) < (d) \leq

2 If $C \in$ the axis of symmetry of \overline{AB} , then $AC - BC =$

- (a) zero (b) 1 (c) 3 (d) 2

3 If the measure of the vertex angle of an isosceles triangle is 80° , then the measure of one of its base angles is

- (a) 45° (b) 40° (c) 50° (d) 100°

4 If $\triangle ABC$ is right-angled at B , $AB = \frac{1}{2} AC$, then $m(\angle A) =$

- (a) 45° (b) 30° (c) 90° (d) 60°

5 In the opposite figure :

$C \in \overrightarrow{AB}$, $D \in \overrightarrow{AB}$

, $m(\angle ACE) < m(\angle BDF)$

, then $m(\angle ECD)$ $m(\angle FDC)$

- (a) > (b) <
(c) = (d) \leq

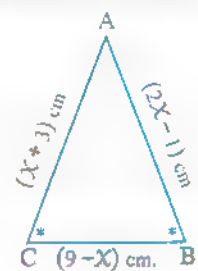

2 [a] In the opposite figure :

ABC is a triangle ,

$m(\angle B) = m(\angle C)$

Find : The perimeter of $\triangle ABC$

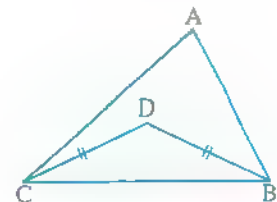

[b] In the opposite figure :

$m(\angle ABC) > m(\angle ACB)$

, $BD = CD$

Prove that : $m(\angle ABD) > m(\angle ACD)$

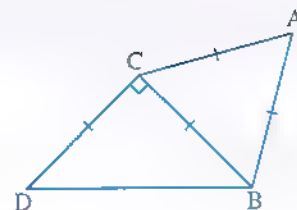

3 [a] In the opposite figure :

$$AB = BC = AC = CD$$

$$, m(\angle BCD) = 90^\circ$$

Find : $m(\angle ABD)$

[b] In the opposite figure :

ABC is a triangle, D, E are the midpoint of \overline{AB} , \overline{AC} respectively

, $\overline{CD} \cap \overline{BE} = \{M\}$, if $CD = 15$ cm.

, $EM = 4$ cm., $DE = 6$ cm.

Find : The perimeter of $\triangle MBC$

4 [a] In the opposite figure :

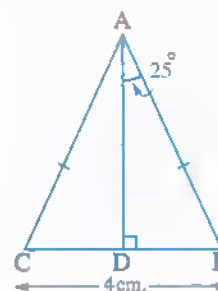

ABC is a triangle, $AB = AC$, $\overline{AD} \perp \overline{BC}$

, $m(\angle BAD) = 25^\circ$, $BC = 4$ cm.

Find :

1 $m(\angle DAC)$

2 The length of \overline{DC}

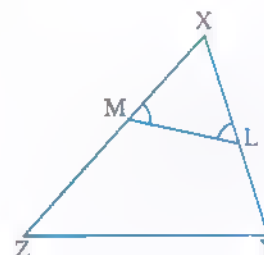

[b] In the opposite figure :

$$XZ > XY$$

$$, m(\angle XLM) = m(\angle XML)$$

Prove that : $ZM > YL$

1 Choose the correct answer from the given ones :

1 In $\triangle ABC$, if $AB > AC$, then $m(\angle C)$ $m(\angle B)$

- (a) $<$ (b) $>$ (c) $=$ (d) \leq

2 In $\triangle XYZ$, \overline{XY} is the shortest side , then the angle of the smallest measure is ..

- (a) X (b) Y (c) Z (d) otherwise.

3 If M is the point of intersection of medians of $\triangle ABC$, \overline{AD} is a median , then $AD : MD =$

- (a) 2 : 3 (b) 3 : 2 (c) 3 : 1 (d) 1 : 3

4 A triangle has 3 axes of symmetry , then the measure of the exterior angle at one of its vertices equals

- (a) 90° (b) 80° (c) 120° (d) 60°

5 In $\triangle ABC$, $AB = 7$ cm. , $BC = 5$ cm. , $AC = 6$ cm. , then $m(\angle B)$ $m(\angle C)$

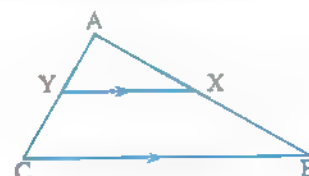

- (a) $>$ (b) $<$ (c) $=$ (d) \equiv

2 [a] In the opposite figure :

ABC is a triangle in which $AB > AC$

, $\overline{XY} \parallel \overline{BC}$

Prove that : $m(\angle AYX) > m(\angle AXY)$

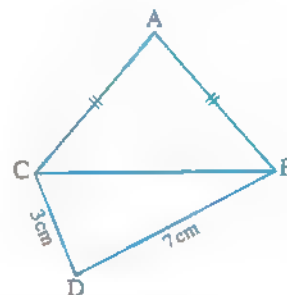

[b] In the opposite figure :

$AB = AC$

, $BD = 7$ cm.

, $DC = 3$ cm.

Prove that : $m(\angle ACD) > m(\angle ABD)$

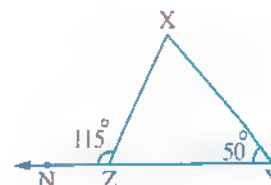

3 [a] In the opposite figure :

XYZ is a triangle in which

$m(\angle Y) = 50^\circ$, $N \in \overleftrightarrow{YZ}$

, $m(\angle XZN) = 115^\circ$

Prove that : $\triangle XYZ$ is isosceles

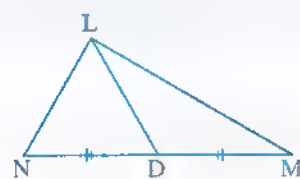

[b] In the opposite figure :

If the perimeter of $\triangle LMD >$ the perimeter of $\triangle LDN$

, D is the midpoint of \overline{MN}

Prove that : $m(\angle N) > m(\angle M)$

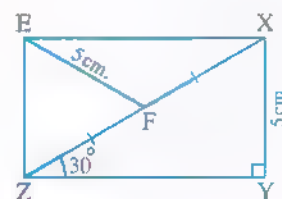

4 [a] In the opposite figure :

$m(\angle Y) = 90^\circ$, $m(\angle XZY) = 30^\circ$

, $XY = EF = 5$ cm. , F is the midpoint of \overline{XZ}

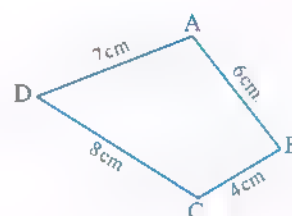

Prove that : $m(\angle XEZ) = 90^\circ$

[b] In the opposite figure :

From the data on the figure.

Prove that : $m(\angle ABC) > m(\angle ADC)$

1 Choose the correct answer from the given ones :

- 1] In $\triangle ABC$, if $m(\angle B) > m(\angle C)$, then
 - (a) $AB > AC$
 - (b) $BC > AC$
 - (c) $AC > AB$
 - (d) $AB > BC$
- 2] In $\triangle XYZ$, $m(\angle Y) = 130^\circ$, then the longest side is
 - (a) \overline{XZ}
 - (b) \overline{XY}
 - (c) \overline{YZ}
 - (d) its median.
- 3] In $\triangle XYZ$, $m(\angle Z) = 70^\circ$, $m(\angle Y) = 60^\circ$, then YZ XZ
 - (a) $<$
 - (b) $>$
 - (c) $=$
 - (d) twice
- 4] In $\triangle ABC$, if $AB > AC$, then $m(\angle B)$ $m(\angle C)$
 - (a) $>$
 - (b) $<$
 - (c) $=$
 - (d) \geq
- 5] If the measures of two angles in a triangle are 48° , 84° , then its type is
 - (a) isosceles.
 - (b) equilateral.
 - (c) scalene.
 - (d) right-angled.
- 6] If A lies on the axis of symmetry of \overline{BC} , then \overline{AB} \overline{AC}
 - (a) $=$
 - (b) $//$
 - (c) \perp
 - (d) \equiv
- 7] If ABC is an obtuse-angled triangle at C , then BC AB
 - (a) $>$
 - (b) $<$
 - (c) $=$
 - (d) \geq
- 8] The longest side in $\triangle XYZ$ where $m(\angle Y) = m(\angle X) + m(\angle Z)$ is
 - (a) \overline{XY}
 - (b) \overline{XZ}
 - (c) \overline{YZ}
 - (d) otherwise.

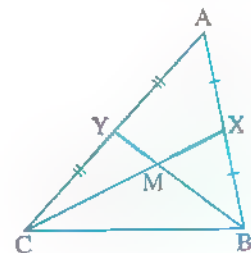

- 2] [a] In $\triangle ABC$, $m(\angle A) = (5X + 2)^\circ$, $m(\angle B) = (6X - 10)^\circ$, $m(\angle C) = (X + 20)^\circ$

Order the lengths of the sides of the triangle ascendingly

[b] In the opposite figure :

X , Y are the midpoints
of \overline{AB} , \overline{AC} respectively
 , $XM > YM$

Prove that : $m(\angle MBC) > m(\angle MCB)$

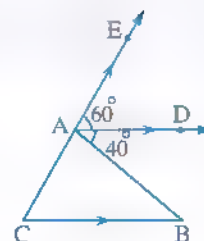

3 [a] In the opposite figure :

$\overrightarrow{AD} \parallel \overrightarrow{BC}$, $m(\angle EAD) = 60^\circ$

, $m(\angle BAD) = 40^\circ$

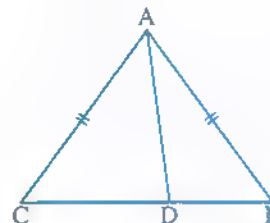

Prove that : $AB > AC$

[b] In the opposite figure :

$AB = AC$, $D \in \overline{BC}$

Prove that : $AB > AD$

1 Choose the correct answer from the given ones :

- 1 The sum of the lengths of any two sides in a triangle is the length of the third side.
(a) greater than (b) equal to (c) smaller than (d) twice
- 2 Which of the following numbers can be the lengths of sides of a triangle ?
(a) 5 , 3 , 2 (b) 6 , 3 , 2 (c) 6 , 3 , 3 (d) 3 , 3 , 3
- 3 If z , 12 , $2z$ are the lengths of sides of a triangle , then the greatest value of $z =$
(a) 12 (b) 11 (c) 4 (d) 3
- 4 The measure of the exterior angle of the equilateral triangle equals
(a) 60° (b) 80° (c) 120° (d) 180°
- 5 If ABC is a right-angled triangle at B , then
(a) $AC < AB$ (b) $AC < BC$ (c) $AB < AC$ (d) $BC > AB$
- 6 ABC is a right-angled triangle at B , if $AC = 20$ cm. , then the length of the median drawn from B equals cm.
(a) 10 (b) 8 (c) 6 (d) 5
- 7 A triangle has one axis of symmetry and the lengths of two sides in it are 3 cm. , 8 cm. , then its perimeter = cm.
(a) 14 (b) 19 (c) 11 (d) 24
- 8 In $\triangle XYZ$, $XY = 8$ cm. , $YZ = 5$ cm. , then its perimeter \in
(a) $]3 , 13[$ (b) $[16 , 26]$ (c) $]16 , 26[$ (d) $\{16 , 26\}$

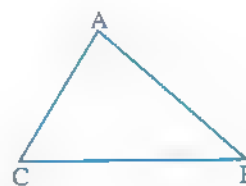

2 [a] In $\triangle ABC$, $m(\angle A) = 50^\circ$, $m(\angle B) = 70^\circ$

Order the lengths of the sides of the triangle descendingly.

[b] In the opposite figure :

ABC is a triangle.

Prove that : $AB < \frac{1}{2}$ the perimeter of $\triangle ABC$

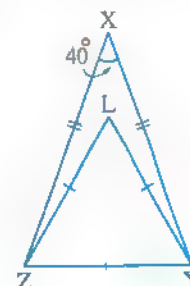

3 In the opposite figure :

LYZ is an equilateral triangle

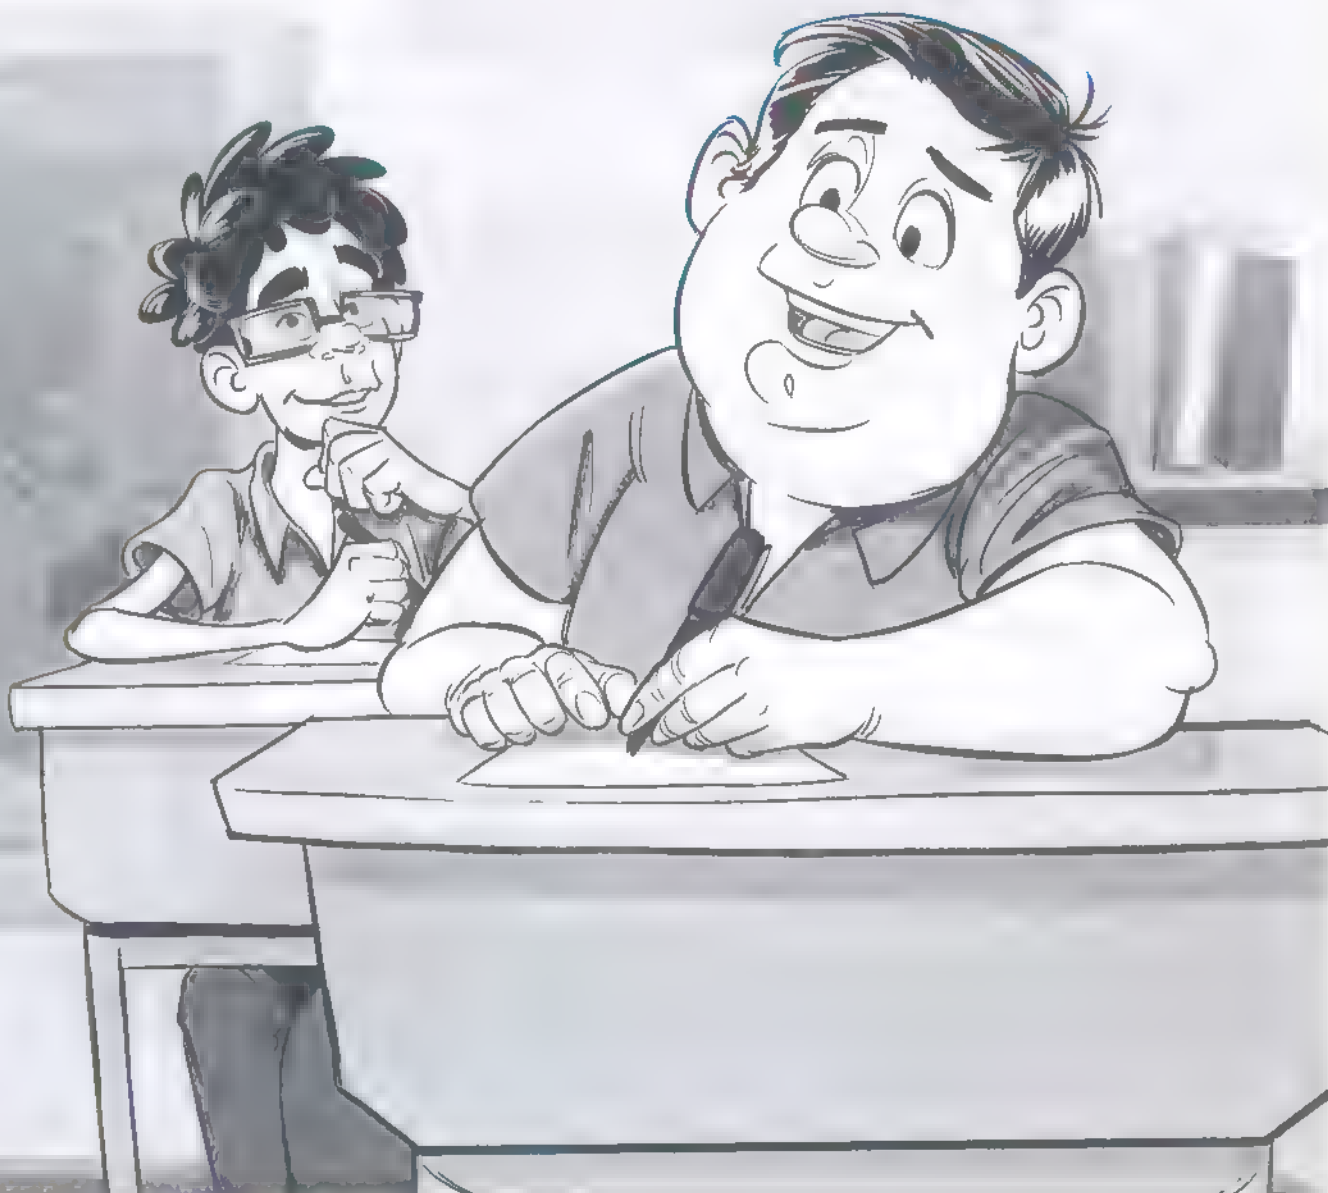

, $XY = XZ$, $m(\angle X) = 40^\circ$

Find : $m(\angle XZL)$

Important Questions

Important questions on Unit Four

First Multiple choice questions

- 1 The number of medians of the right-angled triangle equals
(a) one. (b) two. (c) three. (d) four.
- 2 The length of the side opposite to the angle of measure 30° in the right-angled triangle equals the length of the hypotenuse.
(a) $\frac{1}{4}$ (b) $\frac{1}{3}$ (c) $\frac{2}{4}$ (d) 2
- 3 The length of the median drawn from the vertex of the right angle in the right-angled triangle equals the length of the hypotenuse.
(a) third (b) quarter (c) half (d) double
- 4 The measure of the exterior angle of the equilateral triangle equals $^\circ$
(a) 60 (b) 90 (c) 120 (d) 180
- 5 If the measure of the vertex angle of an isosceles triangle is 50° , then the measure of one of its base angles is $^\circ$
(a) 65 (b) 45 (c) 55 (d) 70
- 6 If the measure of one of the base angles of an isosceles triangle is 40° , then the measure of its vertex angle equals $^\circ$
(a) 40 (b) 50 (c) 80 (d) 100
- 7 An isosceles triangle, the measure of one of its angles is 60° , then the number of its axes of symmetry is
(a) 1 (b) zero. (c) 3 (d) 2
- 8 If the measures of two angles of a triangle are 42° , 69° , then its type is
(a) scalene. (b) isosceles. (c) equilateral. (d) right-angled.
- 9 The point of concurrence of the medians of the triangle divides each of them in the ratio of from the base.
(a) 2 : 1 (b) 1 : 2 (c) 1 : 3 (d) 3 : 1
- 10 The point of concurrence of the medians of the triangle divides each median in the ratio of 5 : from the vertex.
(a) 2.5 (b) 5 (c) 6 (d) 10

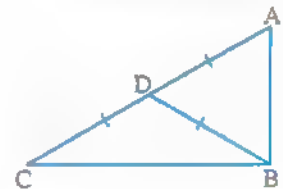

- 11 If M is the point of intersection of the medians of $\triangle ABC$, \overline{AD} is a median, then $AD = \dots\dots\dots AM$
 (a) $\frac{1}{2}$ (b) $\frac{1}{3}$ (c) $\frac{2}{3}$ (d) $\frac{3}{2}$
- 12 In $\triangle ABC$, \overline{AD} is a median, M is the point of intersection of its medians. If $AD = 9$ cm., then $AM = \dots\dots\dots$ cm.
 (a) 3 (b) 6 (c) 9 (d) 12
- 13 The triangle in which the measures of two angles are 48° , 84° , then the number of its axes of symmetry is
 (a) 1 (b) 2 (c) 3 (d) zero.
- 14 If X lies on the axis of symmetry of \overline{AB} , then $XA \dots\dots\dots XB$
 (a) \parallel (b) \perp (c) $=$ (d) \equiv
- 15 $\triangle XYZ$ is an isosceles triangle in which $m(\angle X) = 100^\circ$, then $m(\angle Y) = \dots\dots\dots^\circ$
 (a) 100 (b) 80 (c) 60 (d) 40
- 16 $\triangle ABC$ is right-angled at B, $AC = 12$ cm., $m(\angle A) = 60^\circ$, then $AB = \dots\dots\dots$ cm.
 (a) 12 (b) 6 (c) 4 (d) 3
- 17 A right-angled isosceles triangle, then the measure of one of its base angles is
 (a) 30 (b) 45 (c) 60 (d) 90
- 18 In the opposite figure :
 $x + y = \dots\dots\dots$
 (a) 100° (b) 140°
 (c) 180° (d) 280°

Second Complete questions

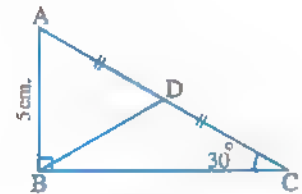

- The medians of a triangle intersect at
- The base angles of the isosceles triangle are
- The bisector of the vertex angle of an isosceles triangle is to the base and ...

- 8 If the measure of one angle in a right-angled triangle is 45° , then the triangle is
- 9 If $C \in$ the axis of symmetry of \overline{AB} , then $AC - BC = \dots\dots\dots$
- 10 If the length of the median drawn from a vertex of a triangle equals half the length of the opposite side to this vertex, then the angle at this vertex is
- 11 In $\triangle ABC$, $AB = AC$, $m(\angle A) = 3 m(\angle B)$, then $m(\angle C) = \dots\dots\dots^\circ$
- 12 In the opposite figure :
 $m(\angle B) = \dots\dots\dots^\circ$

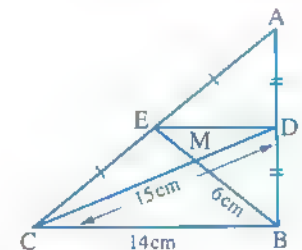

Third Essay questions

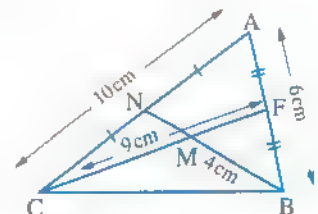

- 1 In the opposite figure :
 $m(\angle ABC) = 90^\circ$
 $m(\angle C) = 30^\circ$, $AD = DC$
 $AB = 5$ cm.
 Calculate : The length of each of \overline{CA} and \overline{BD}

- 2 In the opposite figure :
 M is the intersection point of
 the medians of the triangle ABC
 $BM = 6$ cm. , $BC = 14$ cm. , $DC = 15$ cm.
 Find : The perimeter of $\triangle MDE$

- 3 In the opposite figure :
 F and N are the midpoints of \overline{AB} and \overline{AC} respectively
 $AB = 6$ cm. , $AC = 10$ cm.
 $BM = 4$ cm , $CF = 9$ cm.
 Find : The perimeter of the figure AFMN

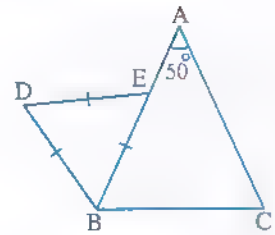

4 In the opposite figure :

$AB = AC$

$m(\angle A) = 50^\circ$

$BD = BE = DE$

Find : $m(\angle DBC)$

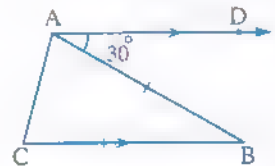

5 In the opposite figure :

$\overrightarrow{AD} \parallel \overrightarrow{CB}$, $m(\angle DAB) = 30^\circ$

$BA = BC$

Find : The measures of the angles of $\triangle ABC$

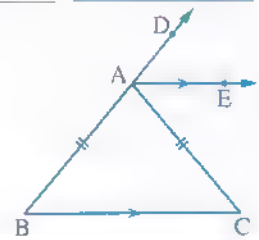

6 In the opposite figure :

$AB = AC$

$\overrightarrow{AE} \parallel \overrightarrow{BC}$

Prove that : \overrightarrow{AE} bisects $\angle DAC$

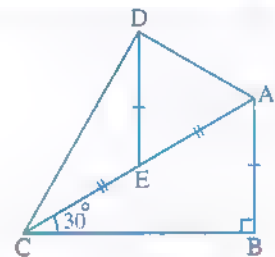

7 In the opposite figure :

$AB = DE$, E is the midpoint of \overline{AC}

$m(\angle B) = 90^\circ$

$m(\angle ACB) = 30^\circ$

Prove that : $m(\angle ADC) = 90^\circ$

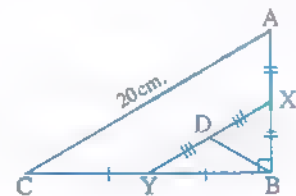

8 In the opposite figure :

$m(\angle ABC) = 90^\circ$, X is the midpoint of \overline{AB}

Y is the midpoint of \overline{BC}

D is the midpoint of \overline{XY} , $AC = 20$ cm.

Find : The length of \overline{BD}

9 In the opposite figure :

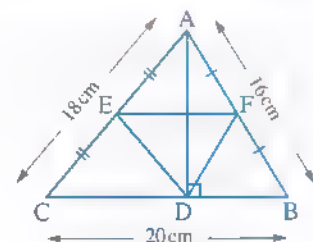

$AB = 16$ cm., $AC = 18$ cm.

$BC = 20$ cm.

F and E are the midpoints of \overline{AB} and \overline{CA} respectively

$\overline{AD} \perp \overline{CB}$

Find : The perimeter of $\triangle DEF$

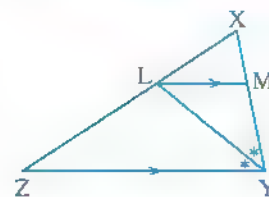

10 In the opposite figure :

XYZ is a triangle , \overline{YL} bisects $\angle XYZ$

and intersects \overline{XZ} at L

, $\overline{LM} \parallel \overline{YZ}$ and intersects \overline{XY} at M

Prove that : $\triangle LMY$ is an isosceles triangle.

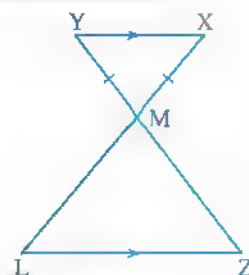

11 In the opposite figure :

$XM = YM$

, $\overline{XY} \parallel \overline{ZL}$

Prove that :

$\triangle MLZ$ is an isosceles triangle.

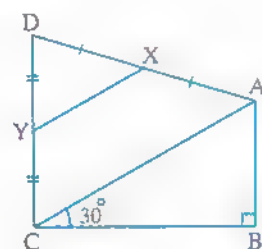

12 In the opposite figure :

$m(\angle B) = 90^\circ$, $m(\angle ACB) = 30^\circ$

, X and Y are the midpoints

of \overline{AD} and \overline{CD} respectively.

Prove that : $AB = XY$

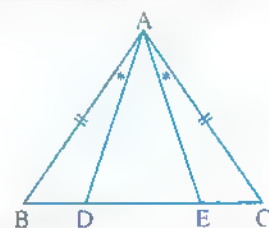

13 In the opposite figure :

$AB = AC$

, $m(\angle BAD) = m(\angle CAE)$

Prove that : $AD = AE$

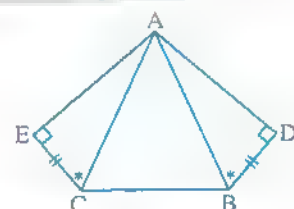

14 In the opposite figure :

$BD = CE$, $m(\angle D) = m(\angle E) = 90^\circ$

, $m(\angle ABD) = m(\angle ACE)$

Prove that : $m(\angle ABC) = m(\angle ACB)$

15 In the opposite figure :

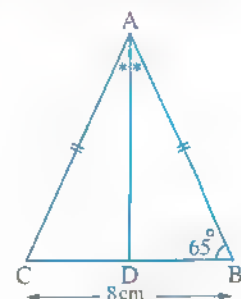

$AB = AC$, \overline{AD} bisects $\angle BAC$

, $BC = 8$ cm.

, $m(\angle B) = 65^\circ$

Prove that : $\overline{AD} \perp \overline{BC}$

and find : The length of \overline{DC} , $m(\angle DAC)$

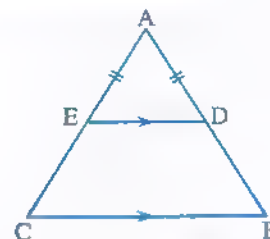

16 In the opposite figure :

$$\overline{DE} \parallel \overline{BC}$$

$$, AD = AE$$

Prove that : $\triangle ABC$ is an isosceles triangle.

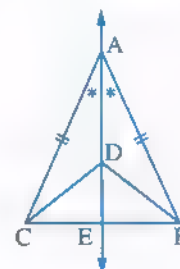

17 In the opposite figure :

$$AB = AC, \overline{AE} \text{ bisects } \angle BAC$$

$$, \overline{AE} \cap \overline{BC} = \{E\}, D \in \overline{AE}$$

$$\text{Prove that : } \textcircled{1} BE = \frac{1}{2} BC$$

$$\textcircled{2} BD = CD$$

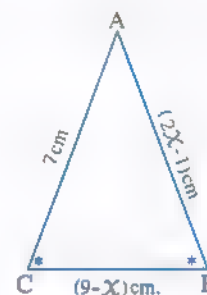

18 In the opposite figure :

$$m(\angle B) = m(\angle C)$$

Find : $\textcircled{1}$ The value of x

$\textcircled{2}$ The perimeter of $\triangle ABC$

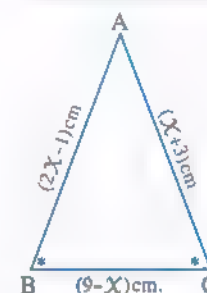

19 In the opposite figure :

$$AB = (2x - 1) \text{ cm.}, AC = (x + 3) \text{ cm.}$$

$$, BC = (9 - x) \text{ cm.}$$

$$, m(\angle B) = m(\angle C)$$

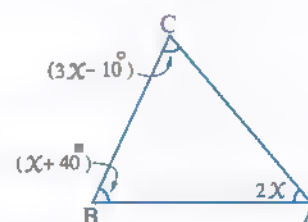

Find : The perimeter of $\triangle ABC$

20 In the opposite figure :

Prove that :

$\triangle ABC$ is an isosceles triangle.

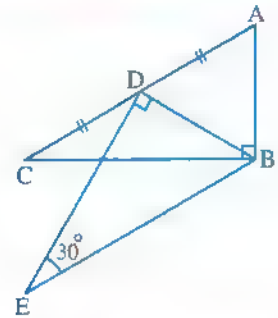

21 In the opposite figure :

$$m(\angle ABC) = m(\angle BDE) = 90^\circ$$

, D is the midpoint of \overline{AC}

$$, m(\angle BED) = 30^\circ$$

Prove that : $AC = BE$

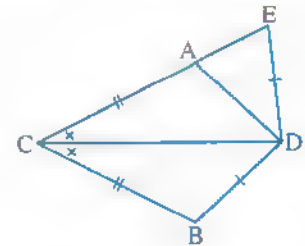

22 In the opposite figure :

$$m(\angle ACD) = m(\angle BCD)$$

$$, AC = BC$$

$$, DB = DE$$

Prove that : $m(\angle E) = m(\angle EAD)$

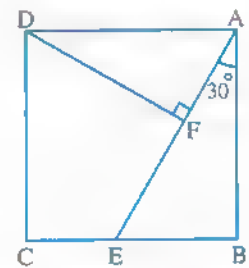

23 In the opposite figure :

ABCD is a square

$$, m(\angle BAE) = 30^\circ$$

$$, \overline{DF} \perp \overline{AE}, AF = 4 \text{ cm.}$$

Calculate : The area of the square.

24 In the opposite figure :

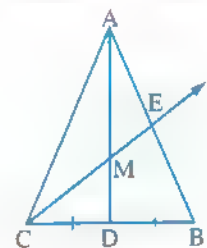

ABC is a triangle

, D is the midpoint of \overline{BC}

, $M \in \overline{AD}$ where $AM = 2 MD$

, $\overline{CM} \cap \overline{AB} = \{E\}$, $EC = 12 \text{ cm.}$

Find : The length of \overline{EM}

Prove that : 1 $AC > AE$

2 $BC > AC$

Final Revision

of Geometry

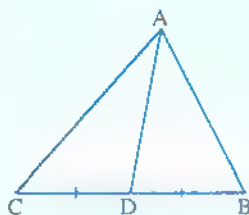

Revision for the important theorems, corollaries and rules of

Geometry

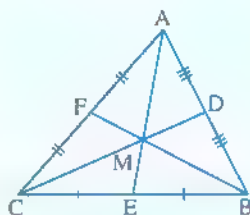

Medians of Triangle

The median of the triangle is the line segment drawn from any vertex of the triangle to the midpoint of the opposite side of this vertex.

If D is the midpoint of \overline{BC} , then \overline{AD} is a median in $\triangle ABC$

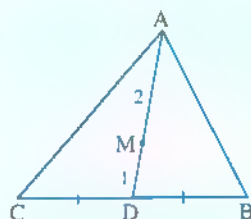

The medians of a triangle are concurrent.

If \overline{CD} , \overline{BF} and \overline{AE} are the medians of $\triangle ABC$ where $\overline{CD} \cap \overline{BF} \cap \overline{AE} = \{M\}$, then M is the intersection point of the medians of $\triangle ABC$

The point of concurrence of the medians of the triangle divides each median in the ratio of :

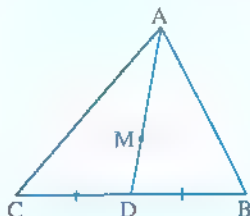

- 1 : 2 from the base.
- 2 : 1 from the vertex.

If M is the intersection point of the medians of $\triangle ABC$, then :

- $DM = \frac{1}{2} AM$
- $AM = 2 DM$
- $DM = \frac{1}{3} AD$
- $AM = \frac{2}{3} AD$

The point which divides the median of a triangle by the ratio 1 : 2 from the base is the point of the intersection of the medians of the triangle.

If $DM : MA = 1 : 2$, then M is the intersection point of the medians of $\triangle ABC$

Right-angled triangle

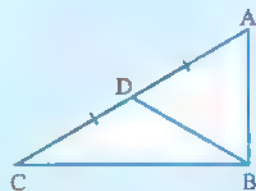

The length of the median from the vertex of the right angle equals half the length of the hypotenuse.

If $\triangle ABC$ is right-angled at B, \overline{BD} is a median in it, then

$$BD = \frac{1}{2} AC$$

If the length of the median drawn from a vertex of a triangle equals half the length of the opposite side to this vertex, then the angle at this vertex is right.

If \overline{BD} is a median of $\triangle ABC$, $BD = \frac{1}{2} AC$, then $m(\angle ABC) = 90^\circ$

The length of the side opposite to the angle of measure 30° in the right-angled triangle equals half the length of the hypotenuse.

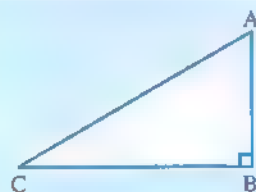

If $\triangle ABC$ is right-angled at B in which :

$$m(\angle C) = 30^\circ$$

, then $AB = \frac{1}{2} AC$

In the right-angled triangle, the hypotenuse is the longest side of the triangle.

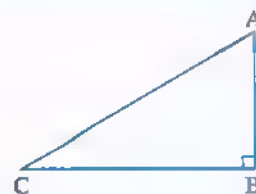

If $\triangle ABC$ is right-angled at B, then

$$AC > AB, AC > BC$$

If $\triangle ABC$ is right-angled at B, then :

- $(AC)^2 = (AB)^2 + (BC)^2$
- $(AB)^2 = (AC)^2 - (BC)^2$
- $(BC)^2 = (AC)^2 - (AB)^2$

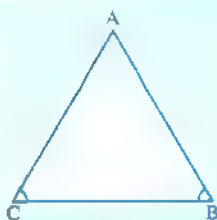

The isosceles triangle

The base angles of the isosceles triangle are congruent.

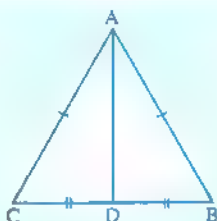

If $\triangle ABC$ in which :
 $AB = AC$, then
 $m(\angle B) = m(\angle C)$

If two angles of a triangle are congruent , then the two sides opposite to these two angles are congruent and the triangle is isosceles.

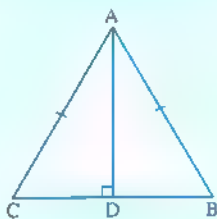

If $\triangle ABC$ in which :
 $m(\angle B) = m(\angle C)$
 , then $AB = AC$

The median of an isosceles triangle from the vertex angle bisects it and is perpendicular to the base.

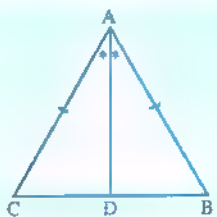

If $\triangle ABC$ in which :
 $AB = AC$, \overline{AD} is a median
 , then \overline{AD} bisects $\angle BAC$
 , $\overline{AD} \perp \overline{BC}$

The straight line drawn passing through the vertex angle of an isosceles triangle perpendicular to the base bisects each of the base and the vertex angle.

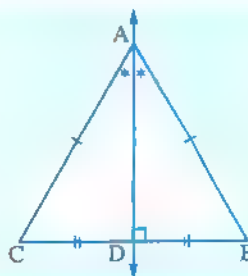

If $\triangle ABC$ in which :
 $AB = AC$, $\overline{AD} \perp \overline{BC}$
 , then D is the midpoint
 of \overline{BC} ,
 \overline{AD} bisects $\angle BAC$

The bisector of the vertex angle of an isosceles triangle bisects the base and is perpendicular to it.

If $\triangle ABC$ in which :
 $AB = AC$, \overline{AD} bisects
 $\angle BAC$, then D is the
 midpoint of \overline{BC} , $\overline{AD} \perp \overline{BC}$

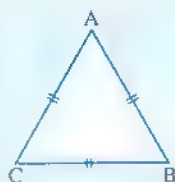

The number of axes of symmetry of the isosceles triangle equals 1

If $\triangle ABC$ in which :
 $AB = AC$, $\overline{AD} \perp \overline{BC}$ and
 intersect it at D
 , then \overleftrightarrow{AD} is the axis of
 symmetry of the triangle ABC

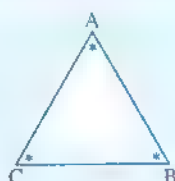

The equilateral triangle

If the triangle is an equilateral, then it is equiangular where each angle measure is 60°

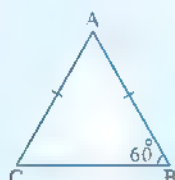

If $\triangle ABC$ in which :
 $AB = BC = CA$, then
 $m(\angle A) = m(\angle B) = m(\angle C) = 60^\circ$

If the angles of a triangle are congruent, then the triangle is equilateral.

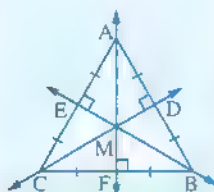

If $\triangle ABC$ in which :
 $m(\angle A) = m(\angle B) = m(\angle C)$
 , then $AB = BC = CA$

The isosceles triangle in which the measure of one of its angles $= 60^\circ$ is an equilateral triangle.

If $\triangle ABC$ in which :
 $AB = AC$, $m(\angle B) = 60^\circ$
 , then $\triangle ABC$ is an equilateral triangle.

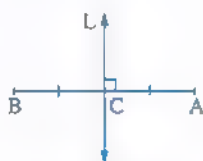

The equilateral triangle has three axes of symmetry.

If $\triangle ABC$ is an equilateral triangle
 $\overrightarrow{AF} \perp \overrightarrow{BC}$, $\overrightarrow{CD} \perp \overrightarrow{AB}$, $\overrightarrow{BE} \perp \overrightarrow{AC}$
 , then \overrightarrow{AF} , \overrightarrow{CD} and \overrightarrow{BE} are the axes of symmetry of the triangle ABC

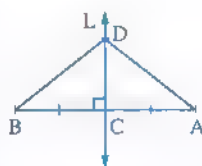

The axis of symmetry

The axis of symmetry of a line segment is the straight line perpendicular to it from its middle.

If the straight line $L \perp \overline{AB}$,
 $C \in \overline{AB}$ where $CA = CB$
 , $C \in$ the straight line L
 , then L is the axis of \overline{AB}

Any point on the axis of symmetry of a line segment is at equal distances from its terminals (end points).

If the straight line L is the axis of \overline{AB} , $D \in$ the straight line L , then $DA = DB$

If a point is at equal distances from the two terminals of a line segment, then this point lies on the axis of this line segment.

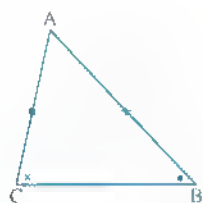

If $CA = CB$, then
 C lies on the axis of \overline{AB}

Inequality relations in the triangle

Comparing the measures of angles in a triangle

If two sides have unequal lengths, the longer is opposite to the angle of the greater measure

If $AB > AC$, then $m(\angle C) > m(\angle B)$

Comparing the lengths of sides in a triangle

If two angles are unequal in measure, then the greater angle in measure is opposite to a side greater in length than that opposite to the other angle.

If $m(\angle B) > m(\angle C)$, then $AC > AB$

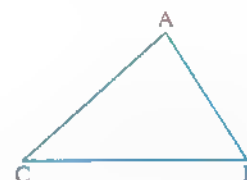

Triangle inequality

In any triangle, the sum of the lengths of any two sides is greater than the length of the third side.

$$AB + BC > AC$$

$$, BC + CA > AB$$

$$, CA + AB > BC$$

Notice that :

- The length of any side of a triangle is greater than the difference between the lengths of the two other sides and less than their sum.

In $\triangle ABC$:

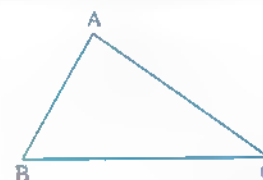

$$AC - AB < BC < AC + AB$$

- The measure of any exterior angle of a triangle is greater than the measure of any interior angle of the triangle except its adjacent angle.

In $\triangle ABC$:

$$m(\angle ABD) > m(\angle A)$$

$$, m(\angle ABD) > m(\angle C)$$

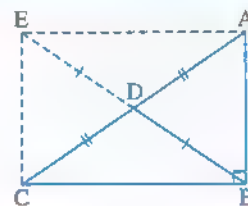

Proofs of the important theorems

Theorem

In the right-angled triangle, the length of the median from the vertex of the right angle equals half the length of the hypotenuse.

Given

ABC is a triangle in which $m(\angle ABC) = 90^\circ$,
 \overline{BD} is a median in the triangle ABC

R.T.P.

$$BD = \frac{1}{2} AC$$

Construction

Draw \overline{BD} and take the point $E \in \overline{BD}$ such that $BD = DE$

Proof

In the figure $ABCE$: $\because \overline{AC}$ and \overline{BE} bisect each other

\therefore The figure $ABCE$ is a parallelogram.

$$\therefore m(\angle ABC) = 90^\circ$$

\therefore The figure $ABCE$ is a rectangle.

$$\therefore BE = AC$$

$$\therefore BD = \frac{1}{2} BE$$

$$\therefore BD = \frac{1}{2} AC$$

(Q.E.D.)

Theorem

If the length of the median drawn from a vertex of a triangle equals half the length of the opposite side to this vertex, then the angle at this vertex is right.

Given

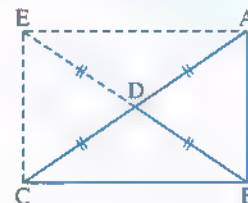

In $\triangle ABC$, \overline{BD} is a median and $DA = DB = DC$

R.T.P.

$$m(\angle ABC) = 90^\circ$$

Construction

Draw \overline{BD} , then take the point $E \in \overline{BD}$
 such that $BD = DE$

Proof

$$\therefore BD = \frac{1}{2} BE = \frac{1}{2} AC$$

$$\therefore BE = AC$$

\therefore In the figure $ABCE$:

\overline{AC} and \overline{BE} are equal in length and bisect each other.

\therefore The figure $ABCE$ is a rectangle.

$$\therefore m(\angle ABC) = 90^\circ$$

(Q.E.D.)

Theorem

The base angles of the isosceles triangle are congruent.

Given

ABC is a triangle in which $\overline{AB} \equiv \overline{AC}$

R.T.P.

$\angle B \equiv \angle C$

Construction

Draw $\overline{AD} \perp \overline{BC}$ where $\overline{AD} \cap \overline{BC} = \{D\}$

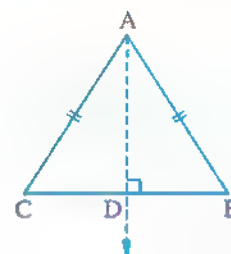

Proof

$\therefore \triangle ADB, ADC$ in which :

$$\begin{cases} m(\angle ADB) = m(\angle ADC) = 90^\circ & (\text{const.}) \\ \overline{AB} \equiv \overline{AC} & (\text{given}) \\ \overline{AD} \text{ is a common side} \end{cases}$$

$\therefore \triangle ADB \equiv \triangle ADC$, then we deduce that $\angle B \equiv \angle C$

(Q.E.D.)

**Theorem**

If two angles of a triangle are congruent, then the two sides opposite to these two angles are congruent and the triangle is isosceles.

Given

ABC is a triangle in which $\angle B \equiv \angle C$

R.T.P.

$\overline{AB} \equiv \overline{AC}$

Construction

bisect $\angle BAC$ by \overline{AD} to intersect \overline{BC} at D

Proof

$\therefore \angle B \equiv \angle C$

$\therefore m(\angle B) = m(\angle C)$

$\therefore \overline{AD}$ bisects $\angle BAC$

$\therefore m(\angle BAD) = m(\angle CAD)$

\therefore The sum of measures of the interior angles of the triangle = 180°

$\therefore m(\angle ADB) = m(\angle ADC)$

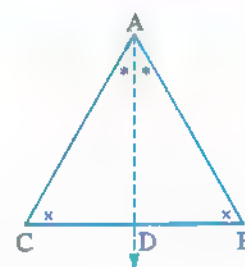

\therefore In $\triangle ABD$ and $\triangle ACD$:

$$\begin{cases} \overline{AD} \text{ is a common side} \\ m(\angle BAD) = m(\angle CAD) & (\text{const.}) \\ m(\angle ADB) = m(\angle ADC) & (\text{by proof}) \end{cases}$$

$\therefore \triangle ABD \equiv \triangle ACD$, then we deduce that

$\overline{AB} \equiv \overline{AC}$, then $\triangle ABC$ is an isosceles triangle.

(Q.E.D.)

Theorem

In a triangle, if two sides have unequal lengths, the longer is opposite to the angle of the greater measure.

Given

ABC is a triangle in which $AB > AC$

R.T.P.

$m(\angle ACB) > m(\angle ABC)$

Construction

Take $D \in \overline{AB}$ such that $AD = AC$

Proof

In $\triangle ACD$: $\because AD = AC \therefore m(\angle ADC) = m(\angle ACD)$ (1)

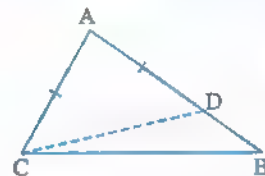

$\therefore \angle ADC$ is an exterior angle of $\triangle DBC$

$\therefore m(\angle ADC) > m(\angle B)$ (2)

From (1) and (2) : $\therefore m(\angle ACD) > m(\angle B)$

$\therefore m(\angle ACB) > m(\angle ACD)$

$\therefore m(\angle ACB) > m(\angle ABC)$ (Q.E.D.)

Theorem

In a triangle, if two angles are unequal in measure, then the greater angle in measure is opposite to a side greater in length than that opposite to the other angle.

Given

ABC is a triangle in which $m(\angle C) > m(\angle B)$

R.T.P.

$AB > AC$

Proof

$\therefore \overline{AB}$ and \overline{AC} are two line segments.

\therefore One of the following cases should be verified.

① $AB > AC$

② $AB = AC$

③ $AB < AC$

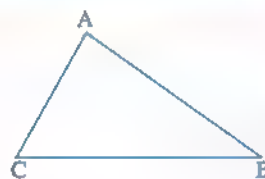

Unless $AB > AC$, then either $AB = AC$ or $AB < AC$

• If : $AB = AC$, then $m(\angle C) = m(\angle B)$ and this contradicts the given where $m(\angle C) > m(\angle B)$

• If : $AB < AC$, then $m(\angle C) < m(\angle B)$ according to the preceding theorem.

Again this contradicts the given, where $m(\angle C) > m(\angle B)$

\therefore It should be that $AB > AC$ (Q.E.D.)

Final Examinations

on Geometry

Model 1

Answer the following questions :

1 Complete the following :

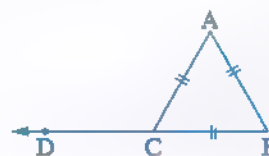

- 1 The longest side in the right-angled triangle is
- 2 If the lengths of two sides in a triangle are 2 cm. and 7 cm. , then
..... < the length of the third side <
- 3 If the measures of two angles in a triangle are different , then the greater in measure of them is opposite to
- 4 If the length of the median drawn from a vertex of a triangle equals half the opposite side to this vertex in length , then
- 5 If the measure of an angle in the isosceles triangle equals 60° , then the triangle is

2 Choose the correct answer from those given :

1 In the opposite figure :

ΔABC is equilateral , then $m(\angle ACD) = \dots\dots\dots$

- | | |
|-----------------|-----------------|
| (a) 45° | (b) 60° |
| (c) 120° | (d) 135° |

2 In ΔABC which is right-angled at B , if $AC = 20$ cm. , then the length of the median of the triangle drawn from B equals

- | | | | |
|------------|-----------|-----------|-----------|
| (a) 10 cm. | (b) 8 cm. | (c) 6 cm. | (d) 5 cm. |
|------------|-----------|-----------|-----------|

3 XYZ is a triangle in which : $m(\angle Z) = 70^\circ$ and $m(\angle Y) = 60^\circ$, then $YZ \dots\dots\dots XY$

- | | | | |
|---------|---------|---------|-----------|
| (a) $>$ | (b) $<$ | (c) $=$ | (d) twice |
|---------|---------|---------|-----------|

4 The lengths which can be lengths of sides of a triangle are

- | | | | |
|---------------|---------------|---------------|---------------|
| (a) 0 , 3 , 5 | (b) 3 , 3 , 5 | (c) 3 , 3 , 6 | (d) 3 , 3 , 7 |
|---------------|---------------|---------------|---------------|

5 The triangle in which the measures of two angles of it are 42° and 69° is

- | | |
|----------------------------|------------------------------|
| (a) an isosceles triangle. | (b) an equilateral triangle. |
| (c) a scalene triangle. | (d) a right-angled triangle. |

6 In the opposite figure :

$m(\angle C) = 2 m(\angle A)$

, $BC = 6$ cm.

, then $AC = \dots\dots\dots$ cm.

- | | |
|-------|--------|
| (a) 3 | (b) 6 |
| (c) 9 | (d) 12 |

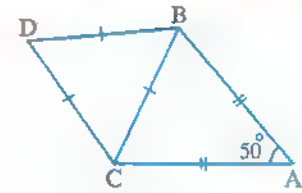

- 3 [a] Complete : ABC is a triangle in which $AB > AC$, then $m(\angle C) \dots\dots m(\angle B)$

[b] In the opposite figure :

$$m(\angle A) = 50^\circ, AB = AC$$

and $\triangle DBC$ is equilateral

Find : $m(\angle ABD)$

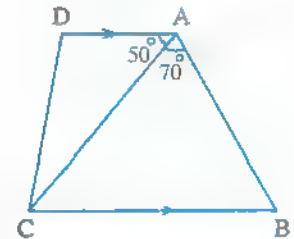

[c] In the opposite figure :

$$\overline{AD} \parallel \overline{BC}$$

$$, m(\angle BAC) = 70^\circ$$

$$\text{and } m(\angle DAC) = 50^\circ$$

Prove that : $BC > AC$

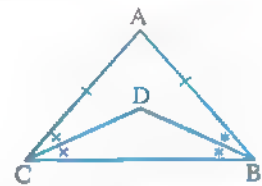

- 4 [a] Prove that : The two base angles of the isosceles triangle are congruent.

[b] In the opposite figure :

$$AB = AC, \overline{BD} \text{ bisects } \angle B$$

and \overline{CD} bisects $\angle C$

Prove that : $\triangle DBC$ is isosceles.

- 5 [a] In the opposite figure :

Arrange the angles

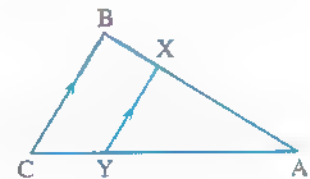

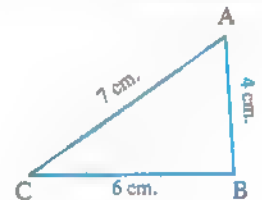

of $\triangle ABC$ descendingly

due to their measures.

[b] In the opposite figure :

$$AB > BC, \overline{XY} \parallel \overline{BC}$$

Prove that : $AX > XY$

Model 2

Answer the following questions :

- 1 Choose the correct answer from those given :

1 The triangle which has three axes of symmetry is

- (a) scalene. (b) isosceles. (c) right-angled. (d) equilateral.

2 The sum of lengths of two sides in a triangle is the length of the third side.

- (a) greater than (b) smaller than (c) equal to (d) twice

3 If the lengths of two sides in an isosceles triangle are 8 cm. and 4 cm. , then the length of the third side is cm.

- (a) 4 (b) 8 (c) 3 (d) 12

- 4 In $\triangle ABC$, if $m(\angle B) = 130^\circ$, then the longest side of it is
 (a) \overline{BC} (b) \overline{AC} (c) \overline{AB} (d) its median.

- 5 $\triangle XYZ$ is an isosceles triangle in which : $m(\angle X) = 100^\circ$, then $m(\angle Y) = \dots\dots\dots$
 (a) 100° (b) 80° (c) 60° (d) 40°

- 6 In the opposite figure :

$x + y = \dots\dots\dots$

- (a) 100° (b) 140°
 (c) 180° (d) 280°

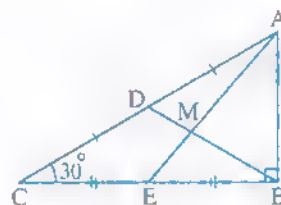

- 2 Complete the following :

- 1 If the measure of an angle in a right-angled triangle is 45° , then the triangle is
 2 The length of any side in a triangle the sum of lengths of the two other sides.
 3 If $\overline{AB} \equiv \overline{XY}$, then $AB = \dots\dots\dots$
 4 In $\triangle ABC$, if $m(\angle A) = 30^\circ$ and $m(\angle B) = 90^\circ$, then $BC = \dots\dots\dots AC$
 5 The axis of symmetry of a line segment is the straight line which at its midpoint.

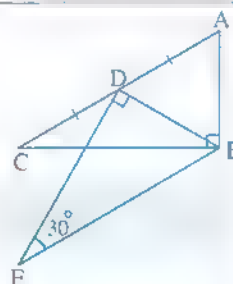

- 3 [a] In $\triangle ABC$, $AB = 7$ cm., $BC = 5$ cm. and $AC = 6$ cm.
 Arrange its angles ascendingly due to their measures.

- [b] In the opposite figure :

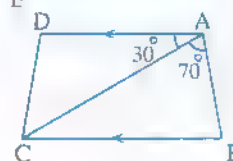

$\triangle ABC$ is right-angled at B
 , $m(\angle C) = 30^\circ$, D is the midpoint of \overline{AC}
 , E is the midpoint of \overline{BC} , $AC = 9$ cm.
 Find : The length of each of \overline{BD} , \overline{BM} and \overline{AB}

- 4 [a] In the opposite figure :
 $m(\angle ABC) = m(\angle BDE) = 90^\circ$
 , $m(\angle E) = 30^\circ$
 , D is the midpoint of \overline{AC}
 Prove that : $AC = BE$

- [b] In the opposite figure :
 $\overline{AD} \parallel \overline{BC}$, $m(\angle BAC) = 70^\circ$
 , $m(\angle DAC) = 30^\circ$
 Prove that : $AC > BC$

- 5 [a] Complete :

If the measures of two angles of a triangle are different, then the greater in measure is opposite to

- [b] In the opposite figure :

$\overline{AB} \parallel \overline{XY}$ and \overline{AB} bisects $\angle YAZ$
 Prove that : $XZ > YZ$

Model for the merge students

Answer the following questions :

1 Complete each of the following :

- 1 The point of concurrence of the medians of the triangle divides each median in the ratio : from the base.
- 2 In the right-angled triangle , the length of the median drawn from the vertex of the right angle equals
- 3 The base angles of the isosceles triangle are
- 4 In $\triangle ABC$, if $m(\angle B) = 70^\circ$, $m(\angle C) = 50^\circ$, then AC AB
- 5 The median of the isosceles triangle from the vertex angle ,

2 Choose the correct answer from those given :

- 1 If ABC is an equilateral triangle , then $m(\angle B) = \dots\dots\dots$
 (a) 30° (b) 60° (c) 70° (d) 90°
- 2 The length of the side opposite to the angle of measure 30° in the right-angled triangle equals the length of the hypotenuse.
 (a) $\frac{1}{2}$ (b) $\frac{1}{3}$ (c) $\frac{1}{4}$ (d) 2
- 3 If the measure of the vertex angle of an isosceles triangle is 80° , then the measure of one of the base angles equals
 (a) 60° (b) 40° (c) 30° (d) 50°
- 4 The number of axes of symmetry of the isosceles triangle is
 (a) 1 (b) 2 (c) 3 (d) zero
- 5 In $\triangle ABC$, if $m(\angle A) = 50^\circ$, $m(\angle B) = 60^\circ$, then the longest side is
 (a) \overline{AB} (b) \overline{BC} (c) \overline{AC}

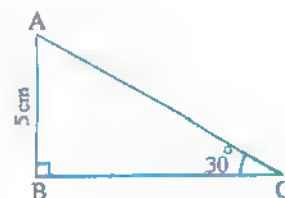

3 In the opposite figure :

$\triangle ABC$ is a right-angled triangle at B , $m(\angle C) = 30^\circ$, $AB = 5$ cm.

Find : The length of \overline{AC}

$$\therefore m(\angle B) = \dots\dots\dots^\circ , m(\angle C) = \dots\dots\dots^\circ$$

$$\therefore AB = \frac{1}{2} \times \dots\dots\dots \therefore AC = \dots\dots\dots \text{ cm.}$$

- 4 [a] In $\triangle ABC$, $m(\angle A) = 40^\circ$, $m(\angle B) = 75^\circ$, $m(\angle C) = 65^\circ$

Arrange the lengths of the sides of the triangle descendingly.

The order is : ... , ... , ...

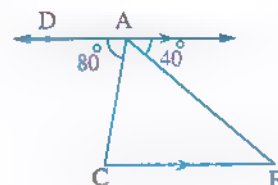

- [b] In the opposite figure :

$\overleftrightarrow{AD} \parallel \overleftrightarrow{BC}$

Complete :

1 $m(\angle B) = \dots\dots\dots^\circ$

2 The side $\dots\dots\dots$ is the longest side of $\triangle ABC$

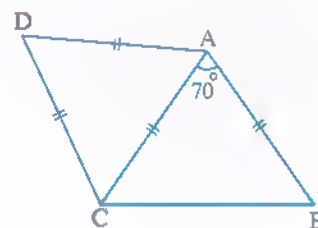

- 5 In the opposite figure :

$AB = AC = CD = AD = 10$ cm.

, $m(\angle BAC) = 70^\circ$

Put (✓) or (X) :

- | | |
|-------------------------------|-----|
| 1 $m(\angle B) = 55^\circ$ | () |
| 2 $m(\angle D) = 70^\circ$ | () |
| 3 $m(\angle DCB) = 120^\circ$ | () |
| 4 $AB + AD = 20$ cm. | () |
| 5 $AB + BC = BC + CD$ | () |

Answer the following questions :

1 Choose the correct answer :

1 In the opposite figure :

ABC is an equilateral triangle , then $m(\angle ACD) = \dots\dots\dots^\circ$

- (a) 45 (b) 60 (c) 120 (d) 135

2 The number of axes of symmetry of a scalene triangle equals

- (a) 3 (b) 2 (c) 1 (d) 0

3 If the triangle XYZ is right-angled at X , then $YZ \dots\dots\dots XZ$

- (a) < (b) > (c) = (d) \leq

4 The point M is the point of intersection of the medians of $\triangle ABC$, \overline{AD} is a median of length 12 cm. , then $MD = \dots\dots\dots$ cm.

- (a) 12 (b) 6 (c) 4 (d) 3

5 The set of numbers which can be lengths of sides of a triangle is

- (a) {4 , 6 , 10} (b) {4 , 6 , 8} (c) {2 , 3 , 6} (d) {4 , 5 , 10}

6 If the measures of two angles in a triangle are 50° , 80° , then the triangle is

- (a) scalene. (b) an isosceles triangle.
(c) an equilateral triangle. (d) a right-angled triangle.

2 Complete :

1 The longest side of the right-angled triangle is

2 The angles of the equilateral triangle are ... in measure and the measure of each of them is $\dots\dots\dots^\circ$

3 In $\triangle DEH$, $m(\angle E) = 110^\circ$, then the longest side in this triangle is

4 If $\overline{AB} \equiv \overline{XY}$, then $AB - XY = \dots\dots\dots$

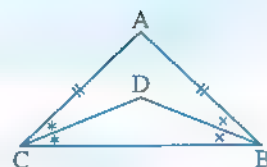

5 In $\triangle ABC$, if $m(\angle A) = 67^\circ$ and $m(\angle B) = 33^\circ$, then $AB > \dots\dots\dots > \dots\dots\dots$

3 [a] In the opposite figure :

$AB = AC$, \overline{BD} bisects $\angle ABC$

, \overline{CD} bisects $\angle ACB$

, **prove that :** $\triangle DBC$ is an isosceles triangle.

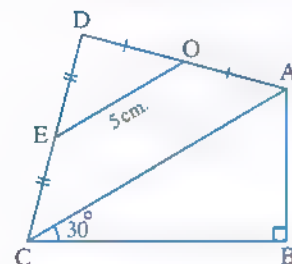

[b] In the opposite figure :

ABCD is a quadrilateral in which

$m(\angle B) = 90^\circ$, $m(\angle ACB) = 30^\circ$

, E and O are the midpoints of \overline{CD} and \overline{AD} , $EO = 5$ cm.

Find : The length of \overline{BA}

4 [a] In $\triangle ABC$, $AB = 6$ cm. , $AC = 7$ cm. , $BC = 8$ cm.

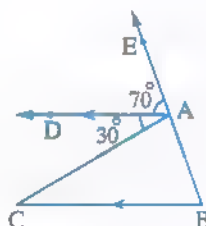

Arrange its angles ascendingly due to their measures.

[b] In the opposite figure :

$\overline{AD} \parallel \overline{BC}$, $m(\angle EAD) = 70^\circ$

, $m(\angle DAC) = 30^\circ$

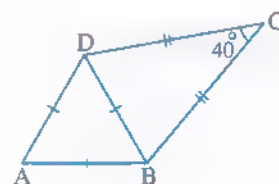

Prove that : $AC > AB$

5 [a] In the opposite figure :

ADB is an equilateral triangle

, $DC = BC$, $m(\angle C) = 40^\circ$

Find : $m(\angle ADC)$

[b] In the opposite figure :

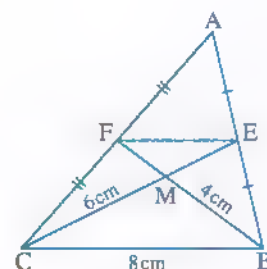

ABC is a triangle in which

E , F are the midpoints of \overline{AB} , \overline{AC} respectively

, $\overline{BF} \cap \overline{CE} = \{M\}$, $BC = 8$ cm.

, $BM = 4$ cm. and $CM = 6$ cm.

Find : The perimeter of $\triangle MEF$

Answer the following questions :

1 Choose the correct answer :

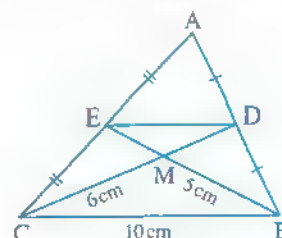

- 1 If $\triangle ABC$ is right-angled at A and $AB = AC$, then $m(\angle B) = \dots\dots\dots^\circ$
 (a) 30 (b) 45 (c) 60 (d) 90
- 2 In $\triangle ABC$, if $m(\angle C) = 65^\circ$ and $m(\angle A) = 75^\circ$, then $\dots\dots\dots$
 (a) $AB > BC$ (b) $AB > AC$ (c) $BC < AB$ (d) $AB = AC$
- 3 In $\triangle ABC$, if $AB = AC$ and $m(\angle A) = 60^\circ$, then the number of axes of symmetry of the triangle ABC is $\dots\dots\dots$
 (a) 0 (b) 1 (c) 2 (d) 3
- 4 If the lengths of two sides of a triangle are 3 cm. and 7 cm. , then the length of the third side may be $\dots\dots\dots$ cm.
 (a) 10 (b) 4 (c) 3 (d) 5
- 5 In $\triangle ABC$, if $AB = AC$ and $m(\angle A) = 80^\circ$, then $m(\angle B) = \dots\dots\dots^\circ$
 (a) 60 (b) 80 (c) 40 (d) 50
- 6 The point of concurrence of the medians of the triangle divides each median in the ratio $\dots\dots\dots$ from the vertex.
 (a) 1 : 2 (b) 2 : 1 (c) 1 : 3 (d) 3 : 1

2 Complete :

- 1 In $\triangle ABC$, if D is the midpoint of \overline{BC} , then \overline{AD} is called $\dots\dots\dots$
- 2 The number of medians in the right-angled triangle is $\dots\dots\dots$
- 3 The length of the side opposite to the angle of measure 30° in the right-angled triangle equals $\dots\dots\dots$ the length of the hypotenuse.
- 4 If the lengths of two sides in a triangle are 2 cm. and 7 cm. , then the length of the third side $\in] \dots\dots\dots , \dots\dots\dots [$
- 5 In $\triangle ABC$, if $m(\angle A) = 67^\circ$ and $m(\angle B) = 33^\circ$, then $AB > \dots\dots\dots > \dots\dots\dots$

3 [a] In the opposite figure :

D and E are the midpoints of \overline{AB} and \overline{AC} respectively

Answer the following questions :

1 Choose the correct answer :

- 1 In $\triangle ABC$, if $AC = 4$ cm. , $BC = 3$ cm. , then $m(\angle B) \dots \dots m(\angle A)$
 (a) $>$ (b) $<$ (c) $=$ (d) \leq
- 2 The length of the side opposite to the angle of measure 30° in the right-angled triangle equals the length of the hypotenuse.
 (a) half (b) twice (c) third (d) quarter
- 3 In $\triangle ABC$, if $m(\angle A) = 100^\circ$ and $AB = AC$, then $m(\angle ABC) = \dots \dots \dots^\circ$
 (a) 80 (b) 60 (c) 40 (d) 30
- 4 The point of intersection of the medians of the triangle divides each of them in the ratio from the base.
 (a) 1 : 3 (b) 3 : 1 (c) 1 : 2 (d) 2 : 1
- 5 If $\triangle ABD$ is obtuse-angled at B and C is the midpoint of \overline{BD} , then the longest side is
 (a) \overline{AB} (b) \overline{AC} (c) \overline{AD} (d) \overline{BD}
- 6 The triangle whose side lengths are 2 cm. , $(X + 3)$ cm. and 5 cm. , becomes an isosceles triangle when $X = \dots \dots \dots$
 (a) 1 (b) 2 (c) 3 (d) 4

2 Complete :

- 1 The total area of a cuboid = 120 cm^2 and its lateral area = 96 cm^2 , then the area of its base equals cm^2
- 2 The base angles of the isosceles triangle are
- 3 ABC is a right-angled triangle at B , $m(\angle C) = 30^\circ$, $AB = 5$ cm. , then $AC = \dots \dots \dots$ cm.

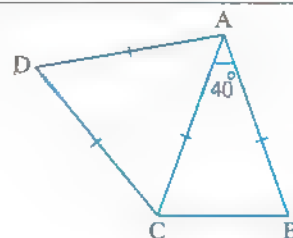

- [4] In $\triangle ABC$, if $m(\angle C) = 30^\circ$, $m(\angle A) = 70^\circ$, then the smallest side in length is ..
- [5] In any triangle, if the lengths of two sides are not equal, then the greater side in length is opposite to

3 [a] In the opposite figure :

$$AB = AC = AD = CD$$

$$, m(\angle BAC) = 40^\circ$$

Find : $m(\angle BCD)$

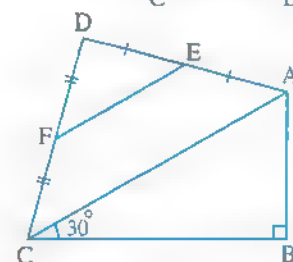

[b] In the opposite figure :

$$m(\angle B) = 90^\circ, m(\angle ACB) = 30^\circ$$

, E is the midpoint of \overline{AD}

, F is the midpoint of \overline{CD}

Prove that : $AB = EF$

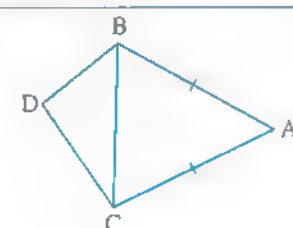

4 [a] In the opposite figure :

$$AB = AC, BD < CD$$

Prove that :

$$m(\angle ABD) > m(\angle ACD)$$

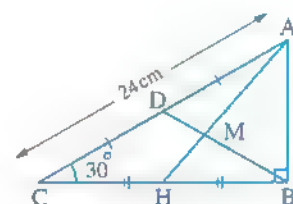

[b] In the opposite figure :

$\triangle ABC$ is right-angled at B

, \overline{AH} , \overline{BD} are two medians in it, $\overline{AH} \cap \overline{BD} = \{M\}$

$$, m(\angle C) = 30^\circ, AC = 24 \text{ cm.}$$

Find : The length of each of \overline{AB} , \overline{BD} , \overline{BM}

5 [a] In the opposite figure :

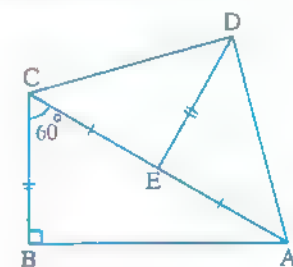

$\triangle ABC$ is a right-angled triangle at B

$$, m(\angle ACB) = 60^\circ$$

, E is the midpoint of \overline{AC}

$$, DE = BC$$

Prove that : $m(\angle ADC) = 90^\circ$

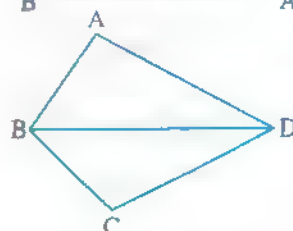

[b] In the opposite figure :

$$AB < AD \text{ and } BC < CD$$

Prove that :

$$m(\angle ABC) > m(\angle ADC)$$

Answer the following questions :

1 Choose the correct answer :

- 1 The measure of the exterior angle of the equilateral triangle equals °
(a) 60 (b) 90 (c) 120 (d) 180
- 2 The length of the side opposite to the angle of measure 30° in the right-angled triangle equals the length of the hypotenuse.
(a) half (b) twice (c) third (d) quarter
- 3 $\triangle ABC$ is an isosceles triangle in which $m(\angle B) = 130^\circ$, then $m(\angle A) = \dots\dots\dots^\circ$
(a) 65 (b) 50 (c) 25 (d) 130
- 4 The angle whose measure is 40° complements an angle of measure°
(a) 140 (b) 90 (c) 40 (d) 50
- 5 The lengths of two sides in a triangle are 4 cm. and 9 cm. and it has one axis of symmetry , then the length of the third side is cm.
(a) 13 (b) 9 (c) 5 (d) 4
- 6 The point of concurrence of the medians of the triangle divides each median in the ratio from the vertex.
(a) 1 : 2 (b) 1 : 3 (c) 3 : 1 (d) 2 : 1

2 Complete each of the following :

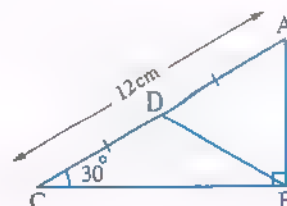

- 1 The sum of lengths of two sides in a triangle is the length of the third side.
- 2 In $\triangle ABC$, if $AB = AC$ and $\overline{AD} \perp \overline{BC}$, then $DC \dots\dots\dots BD$
- 3 In $\triangle XYZ$, if $XY = 3$ cm. and $YZ = 5$ cm. , then $XZ \in] \dots\dots\dots , \dots\dots\dots [$
- 4 If L_1 and L_2 are two straight lines in the same plane , $L_1 \cap L_2 = \emptyset$, then L_1 and L_2 are
- 5 If $\triangle ABC \cong \triangle XYZ$, then $AC = \dots\dots\dots$

3 [a] Arrange ascendingly the lengths of the sides of $\triangle XYZ$, if $m(\angle X) = 55^\circ$ and $m(\angle Z) = 65^\circ$

[b] In the opposite figure :

ABC is a right-angled triangle at B , $m(\angle C) = 30^\circ$
 , $AC = 12$ cm. and D is the midpoint of \overline{AC}

Find by proof : The perimeter of $\triangle ABD$

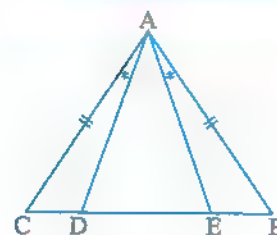

4 [a] In the opposite figure :

$$m(\angle CAD) = m(\angle BAE)$$

$$\text{and } AB = AC$$

Prove that : $AD = AE$

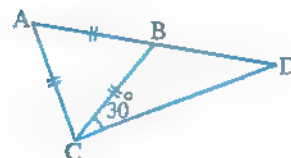

[b] In the opposite figure :

$$B \in \overline{AD}, AB = BC = AC$$

$$\text{and } m(\angle BCD) = 30^\circ$$

Prove that : $\triangle CBD$ is an isosceles triangle.

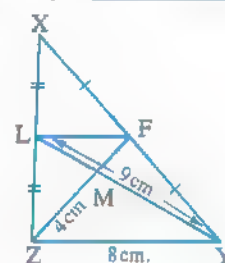

5 [a] In the opposite figure :

XYZ is a triangle in which : F is the midpoint of \overline{XY}

, L is the midpoint of \overline{XZ} , $\overline{YL} \cap \overline{ZF} = \{M\}$

, $YZ = 8$ cm. , $YL = 9$ cm. , $MZ = 4$ cm.

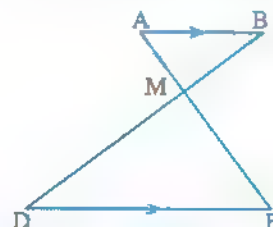

Find by proof : The perimeter of $\triangle MFL$

[b] In the opposite figure :

$$\overline{AB} \parallel \overline{DE} \text{ and } MB > MA$$

Prove that : $MD > ME$

Answer the following questions :

1 Choose the correct answer :

[1] In the opposite figure :

ABC is an isosceles triangle , then x 90°

(a) $>$

(b) $<$

(c) $=$

(d) \leq

[2] In $\triangle XYZ$, if $m(\angle Y) = 115^\circ$, then the longest side is

(a) \overline{XY}

(b) \overline{ZX}

(c) \overline{YZ}

(d) the median of the triangle.

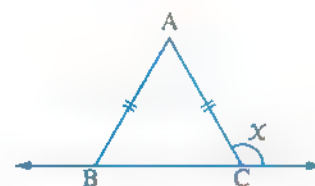

[3] In $\triangle ABC$, $AB = AC$, $m(\angle B) = 6x^\circ$, $m(\angle A) = 3x^\circ$, then $x =$

(a) 12

(b) 30

(c) 60

(d) 90

- 4 If A is a point lying on the axis of symmetry of \overline{BC} , then $AB \dots\dots AC$
 (a) $>$ (b) $<$ (c) $=$ (d) otherwise.
- 5 In $\triangle ABC$, $AB = 5$ cm., $BC = 3$ cm., then $AC \in \dots\dots\dots$
 (a) $[2, 8]$ (b) $]2, 8[$ (c) $[2, 8[$ (d) $]2, 8]$
- 6 In $\triangle ABC$, $AB + BC - AC \dots\dots\dots 0$
 (a) $>$ (b) $<$ (c) $=$ (d) \leq

2 Complete the following :

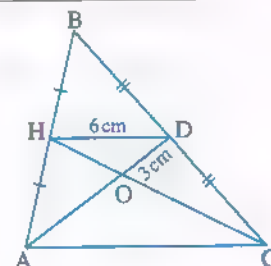

- 1 If $L_1 \parallel L_2$, then $L_1 \cap L_2 = \dots\dots\dots$
- 2 The bisector of the vertex angle of an isosceles triangle $\dots\dots\dots$ and $\dots\dots\dots$
- 3 The least number of acute angles in any triangle is $\dots\dots\dots$
- 4 The number of axes of symmetry of the isosceles triangle equals $\dots\dots\dots$
- 5 The intersection point of the medians of the triangle divides each median by the ratio $2 : \dots\dots\dots$ from the base.

3 [a] In the opposite figure :

$HD = 6$ cm., $HC = 12$ cm.

H is the midpoint of \overline{AB} and D is the midpoint of \overline{BC}
 $\overline{AD} \cap \overline{CH} = \{O\}$, $DO = 3$ cm.

Calculate : The perimeter of the triangle AOC

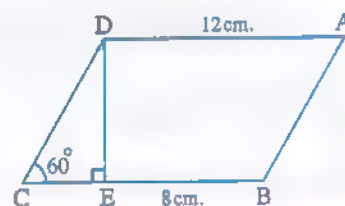

[b] In the opposite figure :

ABCD is a parallelogram, $m(\angle C) = 60^\circ$

$\overline{DE} \perp \overline{BC}$, $AD = 12$ cm., $BE = 8$ cm.

Find : The length of \overline{AB}

4 [a] In the opposite figure :

ABCD is a quadrilateral in which $AB = 6$ cm.

$BC = 4$ cm., $CD = 7$ cm., $DA = 8$ cm.

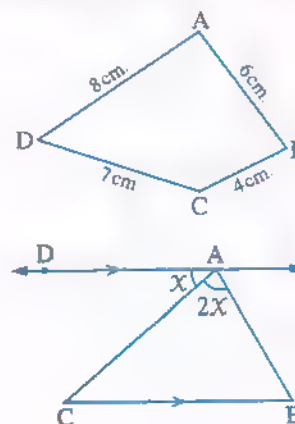

Prove that : $m(\angle BCD) > m(\angle BAD)$

[b] In the opposite figure :

$\overleftrightarrow{AD} \parallel \overleftrightarrow{BC}$

$m(\angle BAD) = 120^\circ$

Prove that : $AB < BC$

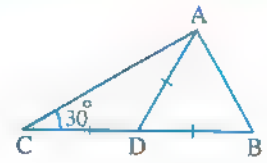

5 [a] In the opposite figure :

$D \in \overline{BC}$ such that $DA = DB = DC$

and $m(\angle C) = 30^\circ$

Prove that : **1** $\triangle ADB$ is an equilateral triangle.

2 $\triangle BAC$ is a right-angled triangle.

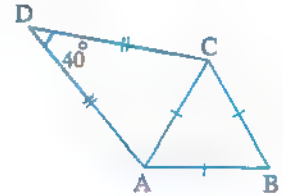

[b] In the opposite figure :

$m(\angle D) = 40^\circ$, $DC = DA$

and $\triangle ABC$ is an equilateral triangle.

Find : $m(\angle DCB)$

8 El-Kalyoubia Governorate

Answer the following questions :

1 Choose the correct answer :

1 The lengths 9 cm. , 4 cm. and ... cm. may be the side lengths of a triangle.

- (a) 4 (b) 5 (c) 8 (d) 13

2 XYZ is a triangle , $m(\angle X) = 60^\circ$, $m(\angle Y) = 40^\circ$, then $XY \dots\dots\dots YZ$

- (a) < (b) > (c) = (d) \leq

3 If \overline{DE} is the axis of symmetry of \overline{AB} and C is the midpoint of \overline{AB} , then all the following is correct except

- (a) $DA = DB$ (b) $CE = CD$ (c) $CB = CA$ (d) $EA = EB$

4 If \overline{AD} is a median of $\triangle ABC$, M is the point of intersection of the medians , E is the midpoint of \overline{AD} and $AD = 9$ cm. , then $EM = \dots\dots\dots$ cm.

- (a) 3 (b) 1 (c) 1.5 (d) 2.5

5 The area of the rhombus whose diagonal lengths are 6 cm. and 8 cm. equals ... cm²

- (a) 48 (b) 24 (c) 28 (d) 96

6 The triangle which has three axes of symmetry is

- (a) right. (b) isosceles. (c) scalene. (d) equilateral.

2 Complete each of the following :

1 If $\angle X$ and $\angle Y$ are two complementary angles and $m(\angle X) = m(\angle Y)$, then $m(\angle X) = \dots\dots\dots^\circ$

- 2] If $m(\angle A) = 70^\circ$, then the measure of reflex of $\angle A = \dots\dots\dots^\circ$
- 3] The point of intersection of the medians of the triangle divides each median in the ratio $\dots\dots\dots$: $\dots\dots\dots$ from the base.
- 4] The number of medians of the obtuse-angled triangle equals $\dots\dots\dots$
- 5] The bisector of the vertex angle of an isosceles triangle $\dots\dots\dots$ and $\dots\dots\dots$

- 3 [a] In $\triangle ABC$, if $AB = AC$, $m(\angle A) = (X + 40)$ and $m(\angle B) = (2X - 10)$

Find : The measure of each angle of the triangle.

- [b] In the opposite figure :

\overrightarrow{DE} bisects $\angle ADB$

and $\overrightarrow{DE} \parallel \overrightarrow{BC}$

Prove that : $\triangle DBC$ is an isosceles triangle.

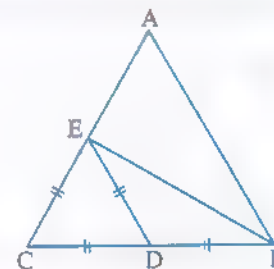

- 4 [a] In the opposite figure :

ABC is a triangle where $D \in \overline{BC}$, $E \in \overline{AC}$

, $BD = CD = CE = DE$

- 1] Prove that : $m(\angle BEC) = 90^\circ$

- 2] If $BC = BA$, prove that : ABC is an equilateral triangle.

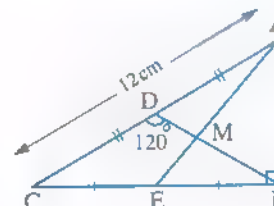

- [b] In the opposite figure :

$\triangle ABC$ is right-angled at B, $m(\angle BDC) = 120^\circ$

, \overline{AE} and \overline{BD} are two medians, $\overline{AE} \cap \overline{BD} = \{M\}$

and $AC = 12$ cm.

Find : The length of each of \overline{BD} , \overline{AB} , \overline{BM} and \overline{MD}

- 5 [a] In the opposite figure :

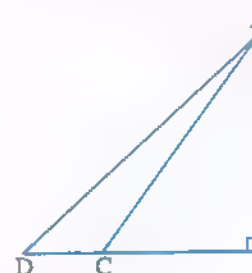

$\triangle ABC$ is right-angled at B

, $C \in \overline{BD}$

Prove that : $AD > BC$

- [b] Prove that :

The length of any side in a triangle is less than half of its perimeter.

Answer the following questions :

1 Choose the correct answer :

- 1 In $\triangle ABC$, if $m(\angle B) > m(\angle C)$, then
 (a) $AB < AC$ (b) $AB = AC$ (c) $AB > AC$ (d) $\overline{AB} \cong \overline{AC}$
- 2 The number of axes of symmetry of the equilateral triangle equals
 (a) 0 (b) 1 (c) 2 (d) 3
- 3 The triangle whose side lengths are 2 cm. , $(x + 1)$ cm. and 5 cm becomes an isosceles triangle when $x =$...
 (a) 1 (b) 2 (c) 3 (d) 4
- 4 In $\triangle ABC$ which is right-angled at B , if $AC = 20$ cm. , then the length of the median of the triangle drawn from B equals
 (a) 10 cm. (b) 8 cm. (c) 6 cm. (d) 5 cm.
- 5 ABC is a triangle in which $AB = AC$ and $m(\angle A) = 110^\circ$, then $m(\angle B) = \dots\dots\dots^\circ$
 (a) 70 (b) 55 (c) 35 (d) 110
- 6 In $\triangle ABC$, if $AB > AC$, $m(\angle C) = 70^\circ$, then $m(\angle B)$ may equal
 (a) 70 (b) 50 (c) 80 (d) 75

2 Complete the following :

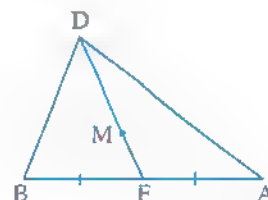

- 1 In $\triangle ABC$, if $AB = 3$ cm. and $BC = 5$ cm. , then $AC \in] \dots\dots\dots , \dots\dots\dots [$
- 2 If the measure of an angle in the isosceles triangle is 60° , then the triangle is
- 3 The length of the side opposite to the angle of measure 30° in the right-angled triangle equals the length of the hypotenuse.
- 4 The measure of the exterior angle of the equilateral triangle equals $^\circ$

5 In the opposite figure :

If \overline{DF} is a median in $\triangle ABD$

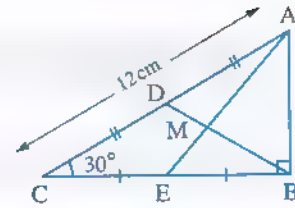

, M is the intersection point of its medians

, $MF = 2$ cm. , then $DF = \dots\dots\dots$ cm.

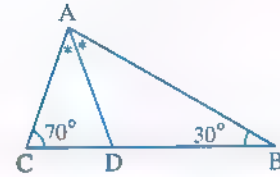

3 [a] In the opposite figure :

$m(\angle ABC) = 90^\circ$, $m(\angle C) = 30^\circ$
 , D and E are the midpoints of \overline{AC} and \overline{BC}
 , $\overline{AE} \cap \overline{BD} = \{M\}$, $AC = 12$ cm.
Find : The length of each of \overline{AB} , \overline{BM}

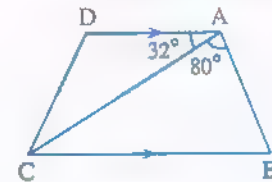

[b] In the opposite figure :

\overline{AD} bisects $\angle BAC$, $m(\angle B) = 30^\circ$
 , $m(\angle C) = 70^\circ$
Prove that : $\triangle ADC$ is an isosceles triangle.

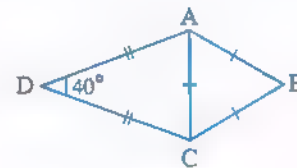

4 [a] In the opposite figure :

$\overline{AD} \parallel \overline{BC}$, $m(\angle BAC) = 80^\circ$
 , $m(\angle CAD) = 32^\circ$
Prove that : $AC > AB$

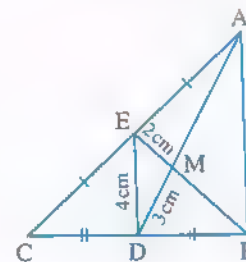

[b] In the opposite figure :

$AB = BC = AC$
 , $m(\angle D) = 40^\circ$ and $AD = DC$
Find : $m(\angle BCD)$

5 [a] In the opposite figure :

E and D are the midpoints of \overline{AC} and \overline{BC}
 , $\overline{AD} \cap \overline{BE} = \{M\}$, $ME = 2$ cm.
 , $MD = 3$ cm. , $DE = 4$ cm.
Find : The perimeter of $\triangle MAB$

[b] In $\triangle XYZ$, if $XY = 7$ cm. , $YZ = 8$ cm. , $ZX = 10$ cm.

, then arrange the measures of the angles in a descending order.

 Al-Salam Language School**

Answer the following questions :

1 Choose the correct answer :

[1] The number of axes of symmetry of the isosceles triangle equals

(a) 0

(b) 1

(c) 2

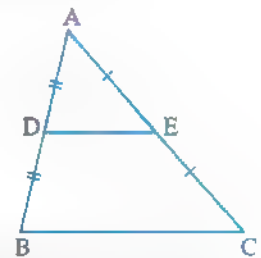

(d) 3

- 2 The triangle whose side lengths are 2 cm. , $(X + 3)$ cm. , 5 cm. becomes an isosceles triangle when $X = \dots\dots\dots$
- (a) 1 (b) 2 (c) 3 (d) 4
- 3 In $\triangle ABC$, if $m(\angle B) = 130^\circ$, then the longest side of it is $\dots\dots\dots$
- (a) \overline{BC} (b) \overline{AC} (c) \overline{AB} (d) its median.
- 4 The triangle in which the measures of two angles are 42° , 69° is $\dots\dots\dots$
- (a) right. (b) isosceles. (c) scalene. (d) equilateral.
- 5 $\triangle XYZ$ is an isosceles triangle in which $m(\angle X) = 100^\circ$, then $m(\angle Y) = \dots\dots\dots^\circ$
- (a) 100 (b) 60 (c) 80 (d) 40
- 6 The numbers which can be lengths of sides of a triangle are $\dots\dots\dots$
- (a) 0 , 3 , 5 (b) 3 , 3 , 5 (c) 3 , 3 , 6 (d) 3 , 3 , 7

2 Complete each of the following :

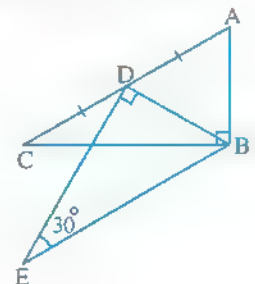

- 1 In an isosceles triangle , if any angle has a measure of 60° , then the triangle is $\dots\dots\dots$
- 2 The intersection point of the medians of a triangle divides each median in the ratio $\dots\dots\dots$ from its base.
- 3 In $\triangle ABC$, if $m(\angle A) = 30^\circ$ and $m(\angle B) = 90^\circ$, then $BC = \dots\dots\dots AC$
- 4 The measure of the exterior angle of an equilateral triangle equals $\dots\dots\dots^\circ$
- 5 In the opposite figure :

In $\triangle ABC$, $AD = DB$
 , $AE = EC$
 , then $DE = \dots\dots\dots BC$
 , $\overline{DE} \dots\dots\dots \overline{BC}$

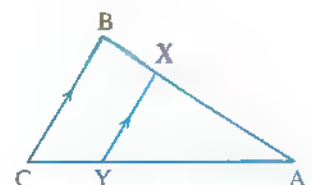

3 [a] In the opposite figure :

$m(\angle ABC) = m(\angle BDE) = 90^\circ$
 , $m(\angle E) = 30^\circ$
 , $AD = DC$
 Prove that : $AC = BE$

[b] In the opposite figure :

$AB > BC$
 , $\overline{XY} \parallel \overline{BC}$
 Prove that : $AX > XY$

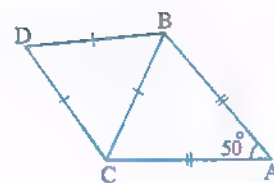

4 [a] In the opposite figure :

$m(\angle A) = 50^\circ$, $AB = AC$

, $\triangle DBC$ is an equilateral triangle.

Find : $m(\angle ABD)$

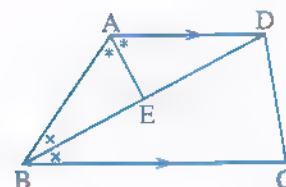

[b] In the opposite figure :

$\overline{AD} \parallel \overline{BC}$, \overline{BD} bisects $\angle ABC$

, \overline{AE} bisects $\angle BAD$

Prove that : **1** $AB = AD$

2 $\overline{AE} \perp \overline{BD}$

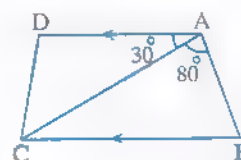

5 [a] In the opposite figure :

$m(\angle BAC) = 80^\circ$, $m(\angle CAD) = 30^\circ$

, $\overline{AD} \parallel \overline{BC}$

Prove that : $BC > AB$

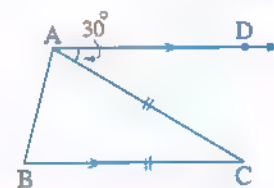

[b] In the opposite figure :

$AC = CB$, $\overline{AD} \parallel \overline{BC}$

, $m(\angle CAD) = 30^\circ$

Find : The measures of the angles of $\triangle ABC$

11

El-Dakahlia Governorate

Page 138

Answer the following questions :

1 Choose the correct answer from those given :

1 The length of the median from the vertex of the right angle in the right-angled triangle equals the length of the hypotenuse.

- (a) half (b) twice (c) third (d) quarter

2 In $\triangle ABC$, if $AB = AC$, $m(\angle B) = 50^\circ$, then $m(\angle A) = \dots\dots\dots^\circ$

- (a) 40 (b) 50 (c) 80 (d) 100

3 The measure of the exterior angle of an equilateral triangle equals $^\circ$

- (a) 60 (b) 90 (c) 120 (d) 360

4 If the point A lies on the axis of symmetry of \overline{CD} , then $\overline{AC} \dots\dots \overline{AD}$

- (a) \parallel (b) \perp (c) \equiv (d) $=$

5 The right angle supplements angle.

- (a) an acute (b) a right (c) an obtuse (d) a straight

6 In $\triangle ABC$, $AB + BC - AC$ zero.

(a) >

(b) =

(c) <

(d) otherwise.

2 Complete each of the following :

1 The longest side in the right-angled triangle is

2 ABCD is a parallelogram, $m(\angle A) + m(\angle C) = 100^\circ$, then $m(\angle B) = \dots\dots\dots^\circ$

3 In $\triangle ABC$, $m(\angle A) = 60^\circ$, $m(\angle B) = 70^\circ$, then the triangle has axes of symmetry.

4 The straight line passing through the vertex of an isosceles triangle perpendicular to the base

5 In a triangle, if the lengths of two sides are 4 cm. and 6 cm., then the length of the third side \in] , [

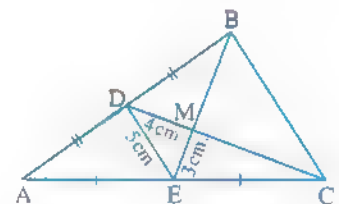

3 [a] In the opposite figure :

M is the intersection point of the medians of $\triangle ABC$

, D and E are the midpoints of \overline{AB} and \overline{AC}

, ME = 3 cm., MD = 4 cm., DE = 5 cm.

Find : The perimeter of $\triangle MBC$

[b] Arrange ascendingly the measures of the angles of $\triangle ABC$ if

AC = 8 cm., BC = 10 cm., AB = 6 cm.

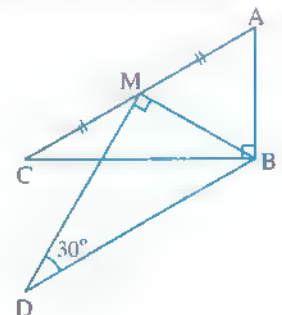

4 [a] In the opposite figure :

M is the midpoint of \overline{AC}

, $m(\angle D) = 30^\circ$

, $m(\angle ABC) = m(\angle BMD) = 90^\circ$

Prove that : AC = BD

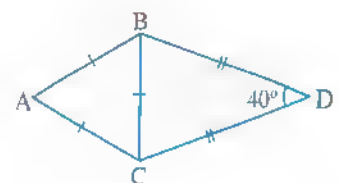

[b] In the opposite figure :

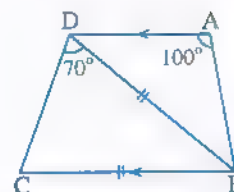

$\triangle ABC$ is equilateral, $BD = DC$

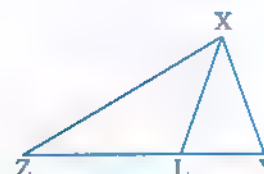

, $m(\angle D) = 40^\circ$

Find : $m(\angle ABD)$

5 [a] In the opposite figure :
 $\overline{AD} \parallel \overline{BC}$, $m(\angle A) = 100^\circ$

 , $m(\angle BDC) = 70^\circ$, $BD = BC$
Prove that : $\triangle ABD$ is an isosceles triangle.

[b] Using the opposite figure :
Prove that :

 The perimeter of $\triangle XYZ > 2 XL$

Suez Governorate

 Directorate of Education
 Inspection of Mathematics

Answer the following questions :
1 Choose the correct answer :

- 1 In $\triangle ABC$, if $m(\angle A) = 130^\circ$, then the longest side of it is
 (a) \overline{AB} (b) \overline{BC} (c) \overline{AC} (d) the hypotenuse.
- 2 In any isosceles triangle , the type of the base angle is
 (a) acute. (b) right. (c) obtuse. (d) reflex.
- 3 The length of the side opposite to the angle of measure 30° in the right-angled triangle equals the length of the hypotenuse.
 (a) half (b) third (c) quarter (d) twice
- 4 The triangle whose side lengths are 10 cm. , $(X + 3)$ cm. , 5 cm. becomes an isosceles triangle when $X =$
 (a) 5 (b) 2 (c) 7 (d) 10
- 5 In $\triangle ABC$, if $AB = 6$ cm. , $AC = 7$ cm. , then $BC \in$
 (a) $]6 , 13]$ (b) $[6 , 7]$ (c) $]1 , 13[$ (d) $[1 , 7[$
- 6 If $A \in$ the axis of symmetry of \overline{BC} , then AB AC
 (a) $=$ (b) \parallel (c) \equiv (d) \perp

2 Complete :

- 1 The sum of lengths of any two sides in a triangle is the length of the third side.
- 2 The longest side in the right-angled triangle is
- 3 The base angles of an isosceles triangle are

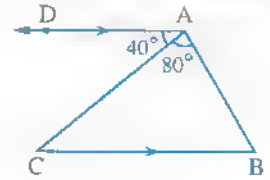

- 4 In $\triangle ABC$, if $m(\angle B) + m(\angle C) = 2m(\angle A)$, then $m(\angle A) = \dots\dots\dots^\circ$
- 5 The bisector of the vertex angle of an isosceles triangle $\dots\dots\dots$, $\dots\dots\dots$

3 [a] In the opposite figure :

$\overline{AD} \parallel \overline{BC}$, $m(\angle BAC) = 80^\circ$

, $m(\angle DAC) = 40^\circ$

Prove that : $BC > AB$

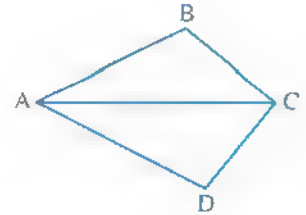

[b] In the opposite figure :

If $AB > BC$

, $AD > DC$

Prove that : $m(\angle BCD) > m(\angle BAD)$

4 [a] In the opposite figure :

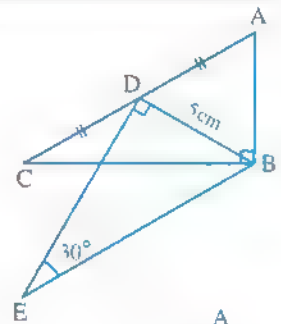

$m(\angle ABC) = m(\angle BDE) = 90^\circ$

, $m(\angle E) = 30^\circ$

, $BD = 5$ cm.

, D is the midpoint of \overline{AC}

Find : The length of each of \overline{AC} and \overline{BE}

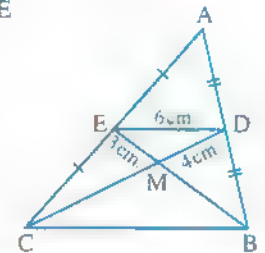

[b] In the opposite figure :

D and E are the midpoints of \overline{AB} and \overline{AC} , $\overline{BE} \cap \overline{CD} = \{M\}$

, $ED = 6$ cm. , $MD = 4$ cm. , $ME = 3$ cm.

Find : The perimeter of $\triangle MBC$

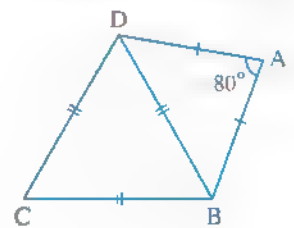

5 [a] In the opposite figure :

$DB = DC = BC$, $AB = AD$

, $m(\angle A) = 80^\circ$

Find : $m(\angle ABC)$

[b] In the opposite figure :

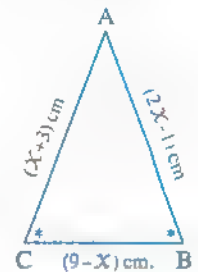

$m(\angle B) = m(\angle C)$

, $AB = (2x - 1)$ cm.

, $AC = (x + 3)$ cm.

, $BC = (9 - x)$ cm.

Find : The perimeter of $\triangle ABC$

Answer the following questions :

1 Choose the correct answer :

- 1 If the lengths of two sides in a triangle are 3 cm. , 7 cm. , then the length of the third side may be cm.
 (a) 3 (b) 4 (c) 6 (d) 10
- 2 The triangle ABC is obtuse-angled at B , then the longest side is
 (a) \overline{AB} (b) \overline{BC} (c) \overline{AC} (d) \overline{AD}
- 3 In the isosceles triangle , if one of its base angles is of measure 40° , then its vertex angle is of measure
 (a) 40° (b) 80° (c) 100° (d) 60°
- 4 The measure of the exterior angle of an equilateral triangle is
 (a) 60° (b) 70° (c) 80° (d) 120°
- 5 In the triangle ABC , if $m(\angle B) = 75^\circ$, $m(\angle C) = 50^\circ$, then BC AB
 (a) $<$ (b) $>$ (c) $=$ (d) \equiv
- 6 If $XA = XB$, $YA = YB$, then \overleftrightarrow{XY} \overline{AB}
 (a) \perp (b) \equiv (c) \parallel (d) $=$

2 Complete the following :

- 1 The point of concurrence of the medians of the triangle divides each median in the ratio : from the base.
- 2 Any point at the axis of symmetry of a line segment is at two equal distances from
- 3 The length of the side opposite to the angle whose measure is 30° in the right-angled triangle equals
- 4 In the right-angled triangle , the length of the median from the vertex of the right angle equals the length of the hypotenuse.
- 5 In $\triangle ABC$, if $m(\angle A) = 70^\circ$, $m(\angle B) = 30^\circ$, then the longest side is

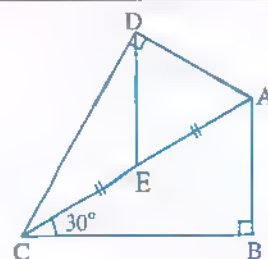

3 [a] In the opposite figure :

ABCD is a quadrilateral

, $m(\angle B) = m(\angle ADC) = 90^\circ$, $m(\angle ACB) = 30^\circ$

, E is the midpoint of \overline{AC}

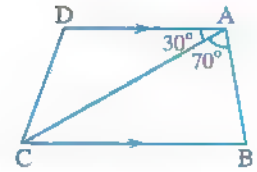

Prove that : $AB = DE$

[b] In the opposite figure :

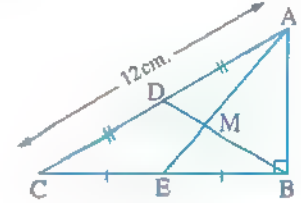

$m(\angle BAC) = 70^\circ$, $m(\angle DAC) = 30^\circ$
 , $\overline{AD} \parallel \overline{BC}$

Prove that : $AC > CB$

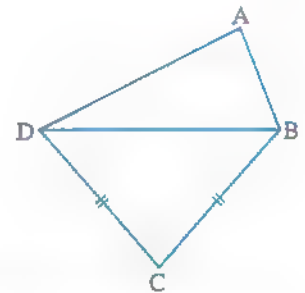

4 [a] In the opposite figure :

ABC is a right-angled triangle at B
 , \overline{AE} and \overline{BD} are two medians of
 the triangle intersecting at M , $AC = 12$ cm.
 Calculate : The length of each of \overline{BD} and \overline{MD}

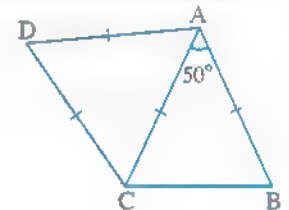

[b] In the opposite figure :

ABCD is a quadrilateral in which
 $AD > AB$ and $BC = CD$
 Prove that :
 $m(\angle ABC) > m(\angle ADC)$

5 [a] In the opposite figure :

$AB = AC = CD = DA$
 , $m(\angle BAC) = 50^\circ$
 Find : $m(\angle BCD)$

[b] ABC is a triangle in which : $m(\angle A) = (5x + 2)^\circ$, $m(\angle B) = (6x - 10)^\circ$
 , $m(\angle C) = (x + 20)^\circ$
 Arrange the lengths of the sides of the triangle in an ascending order.

Directorate of Official Language School
 Education Administration

Answer the following questions :

1 Choose the correct answer from those given :

1 The point of concurrence of the medians of the triangle divides each median in the ratio from the vertex.

(a) 3 : 2

(b) 2 : 1

(c) 1 : 2

(d) 3 : 1

- 2 The sum of lengths of any two sides in a triangle is the length of the third side.
 (a) less than (b) greater than (c) equal to (d) half
- 3 In $\triangle ABC$, if $m(\angle C) = 55^\circ$ and $m(\angle A) = 85^\circ$, then
 (a) $AB > BC$ (b) $AB < AC$ (c) $BC > AB$ (d) $AB = AC$
- 4 The number of axes of symmetry in the scalene triangle equals
 (a) zero. (b) 1 (c) 2 (d) 3
- 5 The triangle whose side lengths are 2 cm., $(X + 3)$ cm. and 5 cm. becomes an isosceles triangle when $X =$
 (a) 1 (b) 2 (c) 3 (d) 4
- 6 If $\overrightarrow{BA} \perp \overrightarrow{BC}$, then $m(\angle ABC) =$
 (a) 45 (b) 90 (c) 180 (d) 360

2 Complete each of the following :

- 1 $\triangle ABC$ is right-angled at B, $AB = 6$ cm. and $AC = 10$ cm., then the length of \overline{BC} equals cm.
- 2 The number of medians of the triangle is
- 3 In $\triangle ABC$, if $m(\angle B) = 55^\circ$ and $m(\angle C) = 70^\circ$, then the type of the triangle ABC according to its side lengths is triangle.
- 4 Any point at the axis of symmetry of a line segment is at equal distances from
- 5 In $\triangle DEF$, if $DE > EF > DF$, then the smallest angle in measure is

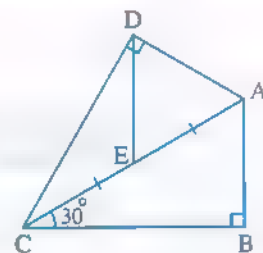

3 [a] In the opposite figure :

$$m(\angle ABC) = m(\angle ADC) = 90^\circ$$

$$, m(\angle ACB) = 30^\circ$$

and E is the midpoint of \overline{AC}

Prove that : $AB = DE$

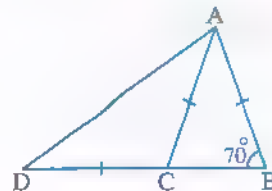

[b] In the opposite figure :

$$AB = AC = CD$$

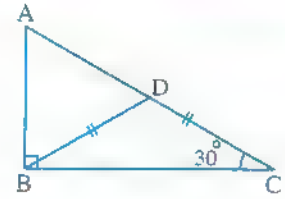

$$\text{and } m(\angle ABC) = 70^\circ$$

Find : $m(\angle BAD)$

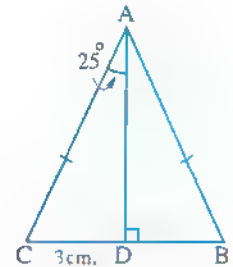

4 [a] In the opposite figure :

ABC is a right-angled triangle at B
 $m(\angle C) = 30^\circ$, $D \in \overline{AC}$ where $DB = DC$
 Prove that : $\triangle ABD$ is an equilateral triangle.

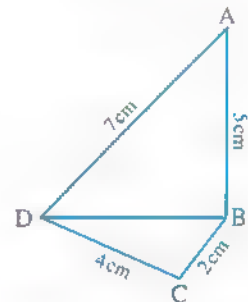

[b] In the opposite figure :

ABC is a triangle in which $AB = AC$
 $CD = 3$ cm.
 $m(\angle CAD) = 25^\circ$ and $\overline{AD} \perp \overline{BC}$
 Find : **1** The length of \overline{BC}
2 $m(\angle BAC)$

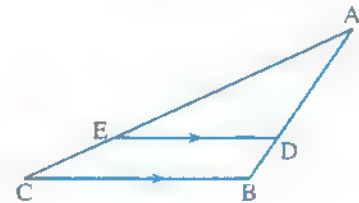

5 [a] In the opposite figure :

ABCD is a quadrilateral in which $AB = 5$ cm.
 $AD = 7$ cm.
 $BC = 2$ cm. and $DC = 4$ cm.
 Prove that :
 $m(\angle ABC) > m(\angle ADC)$

[b] In the opposite figure :

ABC is an obtuse-angled triangle at B and $\overline{DE} \parallel \overline{BC}$
 Prove that : $AE > AD$

Answer the following questions :

1 Choose the correct answer :

- 1** The angle whose measure is more than 90° and less than 180° is
 (a) acute. (b) right. (c) obtuse. (d) straight.
- 2** The point of the intersection of the medians of the triangle divides each of them by the ratio from the base.
 (a) 2 : 1 (b) 1 : 2 (c) 3 : 4 (d) 1 : 1

- 3 In $\triangle XYZ$, $XY = XZ$, $m(\angle Y) = 40^\circ$, then $m(\angle X) = \dots\dots\dots^\circ$
 (a) 40 (b) 55 (c) 70 (d) 100
- 4 The measure of the exterior angle of an equilateral triangle is $\dots\dots\dots^\circ$
 (a) 120 (b) 60 (c) 90 (d) 30
- 5 In $\triangle ABC$, if $AB > AC$, then $m(\angle B) \dots\dots\dots m(\angle C)$
 (a) $>$ (b) $<$ (c) \geq (d) $=$
- 6 In $\triangle ABC$, if $2m(\angle A) = m(\angle B) + m(\angle C)$, then $m(\angle A) = \dots\dots\dots^\circ$
 (a) 45 (b) 90 (c) 60 (d) 120

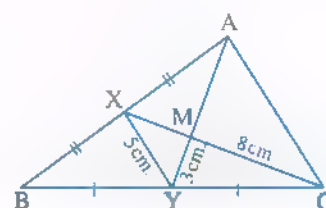

2 Complete the following :

- 1 In $\triangle DEF$, if $m(\angle E) = 120^\circ$, then the longest side is $\dots\dots\dots$
- 2 The isosceles triangle has $\dots\dots\dots$ axes of symmetry.
- 3 If $\overline{AB} \equiv \overline{CD}$ and $AB = 6$ cm., then $AB + CD = \dots\dots\dots$ cm.
- 4 The length of the side opposite to the angle whose measure is 30° in the right-angled triangle is $\dots\dots\dots$
- 5 In $\triangle ABC$, if $AB = 4$ cm., $BC = 5$ cm., then $AC \in] \dots\dots\dots , \dots\dots\dots [$

3 [a] In the opposite figure :

ABC is a triangle, X is the midpoint of \overline{AB}
 Y is the midpoint of \overline{BC} , $\overline{XC} \cap \overline{AY} = \{M\}$
 $XY = 5$ cm., $CM = 8$ cm., $YM = 3$ cm.

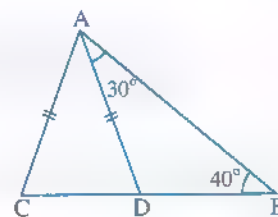

Find : The perimeter of the triangle MAC

[b] In the opposite figure :

$AD = AC$, $m(\angle DAB) = 30^\circ$
 $m(\angle ABD) = 40^\circ$

Prove that : $AB = CB$

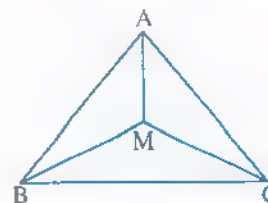

4 [a] In the opposite figure :

ABC is a triangle in which
 M is a point inside it.

Prove that :

$MA + MB + MC > \frac{1}{2}$ the perimeter of the triangle ABC

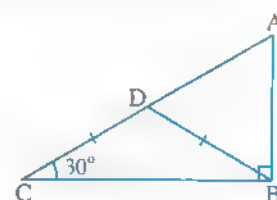

- [b] XYZ is a triangle in which : $m(\angle X) = 40^\circ$, $m(\angle Y) = 80^\circ$
 Order the lengths of sides of $\triangle XYZ$ in an ascending order.

5 [a] In the opposite figure :

ABC is a right-angled triangle at B

, $m(\angle C) = 30^\circ$, $D \in \overline{AC}$ where $DB = DC$

Prove that : $\triangle ABD$ is an equilateral triangle.

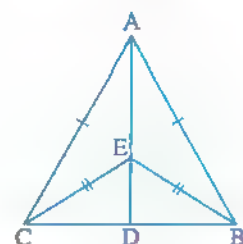

[b] In the opposite figure :

$AB = AC$ and $EB = EC$, $\overleftrightarrow{AE} \cap \overline{BC} = \{D\}$

Prove that :

[1] \overleftrightarrow{AE} is the axis of \overline{BC}

[2] $BD = DC$

Algebra and Statistics Exercises

Answers of unit one

Answers of Exercise 1

1

Number a	8	125	-27	-1000	$3\frac{3}{8}$	$\frac{8}{125}$	216	64
$\sqrt[3]{a}$	2	5	-3	-10	$\frac{3}{2}$	$-\frac{2}{5}$	6	4

2

1 6	2 -7	3 0 1	4 2
5 zero	6 -1	7 6	8 1
9 zero	10 $-\frac{1}{2}$	11 a	12 $3a^2$
13 64	14 64	15 25	16 61

3

1 c	2 b	3 a	4 a	5 d
6 c	7 c	8 d	9 a	10 d
11 c	12 c	13 d	14 b	

4

1 125	2 $\frac{1}{64}$	
3 $\sqrt[3]{x} = 2$		$x = 8$
4 $\sqrt[3]{x} = -1 + 3 = 2$		$x = 8$
5 -2	6 4	
7 $x^3 = 32 \div 5 = 27$		$x = 3$
8 $x^3 = 54 \div 2 = 27$		$x = 3$
9 $x^3 = -200 + \frac{1}{5} = -1000$		$x = -10$

5

- 1 $x^3 = -27$ $x = \sqrt[3]{-27} = -3$
 \therefore The S.S. = $\{-3\}$
- 2 $\because 8x^3 = 8 - 7 = 1$ $x^3 = \frac{1}{8}$
 $\therefore x = \sqrt[3]{\frac{1}{8}} = \frac{1}{2}$ The S.S. = $\{\frac{1}{2}\}$
- 3 $x^3 = \frac{3}{8} - 16 = -\frac{125}{8}$ $x = \sqrt[3]{-\frac{125}{8}} = -\frac{5}{2}$
 The S.S. = $\{-\frac{5}{2}\}$
- 4 $\because 2x^3 - x^3 = 3 + 5$ $\therefore x^3 = 8$
 $x = \sqrt[3]{8} = 2$ The S.S. = $\{2\}$
- 5 $\because x + 3 = \sqrt[3]{343} = 7$ $\therefore x = 7 - 3 = 4$
 \therefore The S.S. = $\{4\}$

6 $3x + 1 = \sqrt[3]{8} = 2$ $\therefore 3x = 2 - 1 = 1$
 $x = 1 \div 3 = \frac{1}{3}$ The S.S. = $\{\frac{1}{3}\}$

7 $(2x + 1)^3 = 20 + 7 = 27$ $\therefore 2x + 1 = \sqrt[3]{27} = 3$
 $2x = 3 - 1 = 2$ $x = 2 \div 2 = 1$
 \therefore The S.S. = $\{1\}$

8 $(5x - 2)^3 = 18 - 10 = 8$ $5x - 2 = \sqrt[3]{8} = 2$
 $5x = 2 + 2 = 4$ $x = \frac{4}{5}$
 The S.S. = $\{\frac{4}{5}\}$

6

1 $\sqrt[3]{2\frac{1}{4} + \frac{2}{3}} = \sqrt[3]{\frac{9}{4} \times \frac{3}{2}} = \sqrt[3]{\frac{27}{8}} = \frac{3}{2}$

2 $\sqrt[3]{2^8 \times 3^6} = \sqrt[3]{(2^3 \times 3^2)^3} = 2^3 \times 3^2 = -8 \times 9 = -72$

3 $\sqrt[3]{729} = \sqrt[3]{9} = 9$

4 $\sqrt[3]{\sqrt[3]{5} \cdot 2} = \sqrt[3]{8} = 2$

5 $\sqrt[3]{27^3 \sqrt[3]{27}} = \sqrt[3]{27 \times 3} = \sqrt[3]{81} = 9$

7

The edge length of the cube = $\sqrt[3]{27} = 3$ cm
 The area of one face = $3^2 = 9$ cm²

8

The edge length of the cube = $\sqrt[3]{216} = 6$ cm
 Its total area = $6 \times 6^2 = 216$ cm²

9

Let the number be x $\therefore \frac{1}{2}x^3 = 32$
 $x^3 = 64$ $\therefore x = 4$
 The number = 4

10

The length of the inner edge = $\sqrt[3]{1000} = 10$ cm

11

The volume of the sphere = $\frac{4}{3}\pi r^3 = \frac{1372}{81}\pi$
 $\therefore r^3 = \frac{1372}{81} \times \frac{3}{4} = \frac{343}{27}$
 $r = \sqrt[3]{\frac{343}{27}} = \frac{7}{3}$
 The diameter length of the sphere
 $= 2 \times \frac{7}{3} = \frac{14}{3}$ length unit.

∴ The volume of the sphere = $\frac{4}{3} \pi r^3 = 113.04$

∴ $\frac{4}{3} \times 3.14 \times r^3 = 113.04$

$r^3 = 27$ ∴ $r = \sqrt[3]{27} = 3$ cm

The diameter length of the sphere = $2 \times 3 = 6$ cm

13

1 $(X^2 + 6)^3 = 1000$ $X^2 + 6 = 10$

$X^2 = 4$ $X = \pm 2$

The S.S. = $\{2, -2\}$

2 $(X^3 - 14)^2 = 169$ $X^3 - 14 = \pm 13$

$X^3 = 14 \pm 13$ $X^3 = 27$ $X = 3$

or $X^3 = 1$ $X = 1$

The S.S. = $\{3, 1\}$

3 Cubing the two sides $(X - 1)^2 = 25$

$X - 1 = \pm 5$ $X = 6$ or $X = -4$

The S.S. = $\{6, -4\}$

4 $\sqrt[3]{(X-2)(X-2)^2} = 3$ $\sqrt[3]{(X-2)^3} = 3$

$X - 2 = 3$ $X = 5$

∴ The S.S. = $\{5\}$

14

Cubing the two sides

$\sqrt[3]{X + 19} = 27$ $\sqrt[3]{X} = 8$

Squaring the two sides

∴ $X = 64$ $\therefore \sqrt[3]{X} = \sqrt[3]{64} = 4$

15

Let the age of the grandfather be X year

∴ The age of the man = $\frac{1}{2}X$ year

The age of the grandson (the elder) = \sqrt{X} year.

The age of the grandson (the middle) = $\sqrt[3]{X}$ year

The age of the granddaughter = $\frac{\sqrt{X}}{\sqrt[3]{X}}$ year

∴ $\sqrt{X} = 2\sqrt[3]{X}$, then cubing the two sides,

$X\sqrt{X} = 8X$, then squaring the two sides

$X^3 = 64X^2$ ∴ $X = 64$

∴ The age of the grandfather = 64 years.

The age of the grandson (the elder) = $\sqrt{64} = 8$ years.

The age of the grandson (the middle) = $\sqrt[3]{64} = 4$ years.

The age of the granddaughter = $8 \div 4 = 2$ years

Answers of Exercise 2

1

The rational numbers are No

① $2, 3, 4, 5, 8, 9,$

$11, 13, 14, 18, 17, 18, 18$

The remained numbers are irrational

2

$1, 3, 12$

$2, 1, 9$

$3, 2, 1$

3

① $\sqrt{4} < \sqrt{5} < \sqrt{9}$ ∴ $2 < \sqrt{5} < 3$

The two numbers are 2 and 3

2 $\sqrt{9} < \sqrt{12} < \sqrt{16}$ ∴ $3 < \sqrt{12} < 4$

The two numbers are 3 and 4

3 $\sqrt[3]{8} < \sqrt[3]{10} < \sqrt[3]{27}$ ∴ $2 < \sqrt[3]{10} < 3$

The two numbers are 2 and 3

4 $\sqrt[3]{-27} < \sqrt[3]{-20} < \sqrt[3]{-8}$ ∴ $-3 < \sqrt[3]{-20} < -2$

The two numbers are -2 and -3

4

1 $\sqrt{1} < \sqrt{2} < \sqrt{4}$ ∴ $1 < \sqrt{2} < 2$ $\lambda = 1$

2 $\sqrt[3]{64} < \sqrt[3]{80} < \sqrt[3]{81}$ ∴ $4 < \sqrt[3]{80} < 5$ $\lambda = 8$

3 $\sqrt[3]{1} < \sqrt[3]{5} < \sqrt[3]{8}$ $1 < \sqrt[3]{5} < 2$ $\lambda = 1$

4 $\sqrt[3]{27} < \sqrt[3]{50} < \sqrt[3]{64}$ ∴ $3 < \sqrt[3]{50} < 4$ ∴ $X = 3$

5 $\sqrt[3]{-125} < \sqrt[3]{-100} < \sqrt[3]{-64}$

$-5 < \sqrt[3]{-100} < -4$ ∴ $X = 5$

⑥ $\sqrt{25} < \sqrt{35} < \sqrt{36}$ ∴ $5 < \sqrt{35} < 6$ ∴ $X = 5$

5

1 $\sqrt{16} < \sqrt{20} < \sqrt{25}$ ∴ $4 < \sqrt{20} < 5$

$(4.1)^2 = 16.81, (4.2)^2 = 17.64, (4.3)^2 = 18.49,$

$(4.4)^2 = 19.36, (4.5)^2 = 20.25$

∴ $4.4 < \sqrt{20} < 4.5$ ∴ $\sqrt{20} = 4.4$ or 4.5

Using the calculator $\sqrt{20} \approx 4.47$

$$\begin{aligned} (2) \quad & \sqrt[3]{8} < \sqrt[3]{17} < \sqrt[3]{27} \quad 2 < \sqrt[3]{17} < 3 \\ & (2.1)^3 = 9.261, (2.2)^3 = 10.648, (2.3)^3 = 12.167 \\ & (2.4)^3 = 13.824, (2.5)^3 = 15.625, (2.6)^3 = 17.576 \\ & 2.5 < \sqrt[3]{17} < 2.6 \end{aligned}$$

$$\sqrt[3]{17} \approx 2.5 \text{ or } 2.6$$

Using the calculator $\sqrt[3]{17} \approx 2.57$

$$\begin{aligned} (3) \quad & \sqrt[3]{4} < \sqrt[3]{5} < \sqrt[3]{9} \quad 2 < \sqrt[3]{5} < 3 \\ & (2.1)^3 = 4.41, (2.2)^3 = 4.84, (2.3)^3 = 5.29 \\ & 2.2 < \sqrt[3]{5} < 2.3 \quad 3.2 < \sqrt[3]{5} < 3.3 \\ & \sqrt[3]{5} + 1 \approx 3.2 \text{ or } 3.3 \end{aligned}$$

Using the calculator $\sqrt[3]{5} + 1 \approx 3.24$

$$\begin{aligned} (4) \quad & \sqrt[3]{8} < \sqrt[3]{9} < \sqrt[3]{27} \quad \therefore 2 < \sqrt[3]{9} < 3 \\ & (2.1)^3 = 9.261 \quad \therefore 2 < \sqrt[3]{9} < 2.1 \\ & \therefore 1 < \sqrt[3]{9} - 1 < 1.1 \quad \therefore \sqrt[3]{9} - 1 \approx 1 \text{ or } 1.1 \end{aligned}$$

Using the calculator $\sqrt[3]{9} - 1 \approx 1.08$

6

$$\begin{array}{llll} (1) d & (2) b & (3) b & (4) c \\ (5) c & (6) b & (7) b & (8) d \\ (9) c & (10) c & (11) d & \end{array}$$

7

$$\begin{aligned} 1 \quad & x^2 = \frac{10}{x} = 2 \quad x = \pm \sqrt{2} \quad x \in \mathbb{Q} \\ 2 \quad & x^2 = \frac{9}{4} \quad x = \pm \sqrt{\frac{9}{4}} = \pm \frac{3}{2} \quad \therefore x \in \mathbb{Q} \\ 3 \quad & x = \sqrt[3]{125} \quad x = 5 \quad \therefore x \in \mathbb{Q} \\ 4 \quad & x^3 = \frac{27}{x} = 9 \quad x = \sqrt[3]{9} \quad x \in \mathbb{Q} \\ 5 \quad & x^2 = \frac{-10}{0.1} = 100 \quad \therefore x = \pm \sqrt{100} = \pm 10 \quad \therefore x \in \mathbb{Q} \\ 6 \quad & x^3 = \frac{-8}{0.001} = -8000 \\ & \therefore x = \sqrt[3]{-8000} = -20 \quad \therefore x \in \mathbb{Q} \\ 7 \quad & x \cdot 1 = \pm \sqrt{4} = \pm 2 \quad x = 2 + 1 = 3 \\ & \text{or } x = -2 + 1 = -1 \quad \therefore x \in \mathbb{Q} \\ 8 \quad & (x-5) = \sqrt{1} = 1 \quad \therefore x = 1 + 5 = 6 \quad \therefore x \in \mathbb{Q} \end{aligned}$$

8

$$\begin{aligned} 1 \quad & x^2 = 13 \quad x = \pm \sqrt{13} \\ & \text{The S.S.} = \{ \sqrt{13}, -\sqrt{13} \} \end{aligned}$$

$$(2) \quad x^3 = 16 \quad x = \sqrt[3]{16} \quad \therefore \text{The S.S.} = \{ \sqrt[3]{16} \}$$

$$3 \quad x^2 = \frac{25}{2} \times \frac{5}{2} = \frac{25}{4} \quad x = \pm \sqrt{\frac{125}{4}}$$

$$\therefore \text{The S.S.} = \left\{ \sqrt{\frac{25}{4}}, \sqrt{\frac{125}{4}} \right\}$$

$$4 \quad x^3 = 2 \times \frac{4}{5} = \frac{8}{5} \quad x = \sqrt[3]{\frac{8}{5}}$$

$$\text{The S.S.} = \left\{ \sqrt[3]{-\frac{8}{5}} \right\}$$

$$5 \quad 125x^3 = 27 \quad x^3 = \frac{27}{125}$$

$$x = \sqrt[3]{\frac{27}{125}} = \frac{3}{5}$$

$$\text{The S.S.} = \emptyset \text{ because } \frac{3}{5} \notin \mathbb{Q}$$

$$6 \quad \frac{1}{4}x^2 = 64 \quad x^2 = 64 \times 4 = 256$$

$$x = \pm \sqrt{256} = \pm 16$$

$$\text{The S.S.} = \emptyset \text{ because } 16 \notin \mathbb{Q}, -16 \notin \mathbb{Q}$$

$$7 \quad (x^3 + 5)(x^3 - 1) = 0$$

$$x^3 + 5 = 0 \quad x^3 = -5 \quad x = -\sqrt[3]{5}$$

$$\text{or } x^3 - 1 = 0 \quad x^3 = 1 \quad x = \pm \sqrt[3]{1}$$

$$\text{The S.S.} = \{ -\sqrt[3]{5}, \sqrt[3]{1}, -\sqrt[3]{1} \}$$

$$8 \quad (x + \sqrt{7})(x^3 - 6) = 0$$

$$\therefore x + \sqrt{7} = 0 \quad x = -\sqrt{7}$$

$$\text{or } x^3 - 6 = 0 \quad x^3 = 6$$

$$x = \sqrt[3]{6} \quad \text{The S.S.} = \{ \sqrt[3]{7}, \sqrt[3]{6} \}$$

9

$$1 \quad (1.4)^2 = 1.96, (1.5)^2 = 2.25, (\sqrt{2})^2 = 2$$

$$\sqrt{2} \text{ is included between } 1.4 \text{ and } 1.5$$

$$2 \quad (3.31)^2 = 10.96, (3.32)^2 = 11.02, (\sqrt{11})^2 = 11$$

$$\therefore \sqrt{11} \text{ is included between } 3.31 \text{ and } 3.32$$

$$3 \quad (1.2)^3 = 1.728, (1.3)^3 = 2.197, (\sqrt[3]{2})^3 = 2$$

$$\therefore \sqrt[3]{2} \text{ is included between } 1.2 \text{ and } 1.3$$

$$4 \quad (2.4)^3 = 13.824, (2.5)^3 = 15.625$$

$$(\sqrt[3]{15})^3 = 15$$

$$\therefore \sqrt[3]{15} \text{ is included between } 2.4 \text{ and } 2.5$$

$$5 \quad (-2.6)^3 = -17.576, (-2.5)^3 = -15.625$$

$$(\sqrt[3]{-17})^3 = -17$$

$$\therefore \sqrt[3]{-17} \text{ is included between } -2.6 \text{ and } -2.5$$

Algebra and Statistics

$$2.7 - 1 = 1.7, (1.7)^2 = 2.89$$

$$2.8 - 1 = 1.8, (1.8)^2 = 3.24$$

$$\sqrt{3+1} = \sqrt{3} + (\sqrt{3})^2 = 3$$

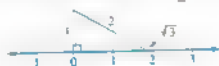

$\sqrt{3}$ is included between 1.7 & 1.8

$\therefore \sqrt{3+1}$ is included between 2.7 & 2.8

10

1 The length of one side of the right angle = $\frac{3-1}{2} = 1$

The length of the hypotenuse = $\frac{3+1}{2} = 2$

2 The length of one side

of the right angle

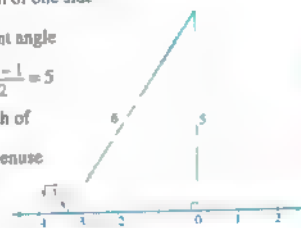

equals $\frac{11-1}{2} = 5$

The length of

the hypotenuse

$$= \frac{11+1}{2}$$

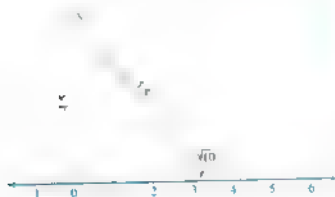

$$= 6$$

3 The length of one side of the right angle

$$= \frac{10-1}{2} = 4.5$$

The length of the hypotenuse = $\frac{10+1}{2} = 5.5$

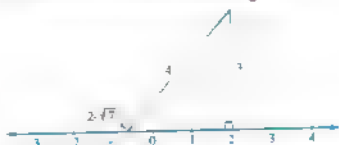

4 The length of one side of the right angle = $\frac{5-1}{2} = 2$

The length of the hypotenuse = $\frac{5+1}{2} = 3$

5 The length of one side of the right angle = $\frac{7-1}{2} = 3$

The length of the hypotenuse = $\frac{7+1}{2} = 4$

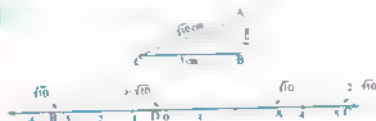

11

The length of one side of the right angle = $\frac{2-1}{2} = 0.5$

The length of the hypotenuse = $\frac{2+1}{2} = 1.5$

12

13

The length of the side of the square = $\sqrt{10}$ cm.

The square of the length of the diagonal

$$= (\sqrt{10})^2 + (\sqrt{10})^2 = 10 + 10 = 20$$

\therefore The length of the diagonal = $\sqrt{20}$ cm

14

The length of the tree = 3 m.

$\therefore AB + BC = 3$ m.

\therefore the length of the left part of the tree = 1 m.

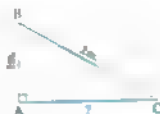

$\therefore BC = 3 - 1 = 2$ m.

\therefore In $\triangle ABC$, $m(\angle A) = 90^\circ$

$$(AC)^2 = (BC)^2 - (AB)^2 = 4 - 1 = 3$$

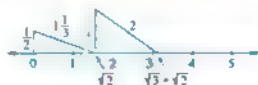

$$AC = \sqrt{3}$$
 m.

The distance between the base of the tree and the point of touching of its top with the ground = $\sqrt{3}$ m

15

We represent on the number line the point representing the number $\sqrt{3} + \sqrt{2}$ as shown in the figure

We find that the point representing the number $\sqrt{3} + \sqrt{2}$ lies between the point representing the number 3 and the point representing the number 4
i.e. $\sqrt{3} + \sqrt{2}$ lies between 3 and 4

5 d 6 c 7 a 8 b
9 b 10 a 11 d 12 a
13 c 14 d

1

- 1 The ascending order is
 $-\sqrt{11}, -\sqrt{7}, -\sqrt{3}, \sqrt{5}, \sqrt{8}$ and $\sqrt{15}$

- 2 $\because 0.6 = \sqrt{0.36}, \sqrt[3]{-1} = -1 = -\sqrt{1}$
 \therefore The ascending order is
 $\sqrt{45}, \sqrt{1}, \sqrt{0.36}, \sqrt{20}$ and $\sqrt{27}$
i.e. $-\sqrt{45}, \sqrt[3]{-1}, 0.6, \sqrt{20}$ and $\sqrt{27}$

2

- 1 $\because 8 = \sqrt{64}$
The descending order is
 $\sqrt{70}, \sqrt{64}, \sqrt{62}$ and $-\sqrt{50}$
i.e. $\sqrt{70}, 8, \sqrt{62}$ and $-\sqrt{50}$
2 $\because 9 = \sqrt{81}$
The descending order is
 $\sqrt{101}, \sqrt{81}, \sqrt{6}, -\sqrt{7}, -\sqrt{10}$ and $-\sqrt{50}$
i.e. $\sqrt{101}, 9, \sqrt{6}, \sqrt{7}, \sqrt{10}$ and $\sqrt{50}$

3

- 2² = 4 4 > 3 > 2 > $\frac{3}{2}$ > 0
 $2 > \sqrt{3} > \sqrt{2} > \sqrt{\frac{3}{2}} > 0$
 \therefore The positive irrational numbers are
 $\sqrt{3}, \sqrt{2}$ and $\sqrt{\frac{3}{2}}$
(There are other solutions)

4

- The irrational numbers are
 $-\sqrt{5}, -\sqrt{3}$ and $-\sqrt{2}$ (There are other solutions)

5

- (15)² = 225, (17)² = 289
Then choosing 4 integers included
between 225, 289
(except 256 because $\sqrt{256} = 16 \in \mathbb{Q}$)
 $225 < 235 < 245 < 255 < 265 < 289$
 $\therefore 15 < \sqrt{235} < \sqrt{245} < \sqrt{255} < \sqrt{265} < 17$
The four irrational numbers are
 $\sqrt{235}, \sqrt{245}, \sqrt{255}$ and $\sqrt{265}$
(There are other solutions)

10

 Using the calculator $\sqrt{3} \approx 1.73$

(to the nearest hundredth)

$$1.7 < \sqrt{3} < 1.8 \text{ for representing } \sqrt{3}$$

$$\therefore \text{The length of the hypotenuse} = \frac{3+1}{2} = 2$$

$$\therefore \text{the length of one side of the right angle} = \frac{3-1}{2} = 1$$

11

$$1 \quad x^2 = 6 \quad x = \pm\sqrt{6} \approx \pm 2.45$$

$$2 \quad x^2 = 24 \times \frac{4}{3} = 32 \quad x = \pm\sqrt{32} \approx \pm 5.66$$

$$3 \quad \frac{1}{2} x^2 = 5 \quad x^2 = 5 \times 2 = 10$$

$$x = \pm\sqrt{10} \quad \therefore x \approx \pm 3.16$$

$$4 \quad 5x^3 = 1 \quad x^3 = \frac{1}{5}$$

$$x = \sqrt[3]{\frac{1}{5}} \approx 0.58$$

$$5 \quad \frac{3}{4} x^2 = -13 \quad x^2 = -13 \times \frac{4}{3} = -\frac{52}{3}$$

 (has no solution in \mathbb{R})

$$6 \quad \frac{2}{x} = 16 \quad \therefore x^3 = \frac{1}{8} \quad x = \sqrt[3]{\frac{1}{8}} = \frac{1}{2}$$

$$7 \quad (x^2 - 9)(x^3 - 5) = 0$$

$$x^2 - 9 = 0 \quad \therefore x^2 = 9$$

$$x = \pm\sqrt{9} = \pm 3$$

$$\text{or } x^3 - 5 = 0 \quad \therefore x^3 = 5$$

$$\therefore x = \sqrt[3]{5} \approx 1.71$$

$$8 \quad (2x^3 - 5)(x^2 + 1) = 0$$

$$\therefore 2x^3 - 5 = 0 \quad \therefore 2x^3 = 5$$

$$x^3 = \frac{5}{2} \quad x = \sqrt[3]{\frac{5}{2}} \approx 1.36$$

$$\text{or } x^2 + 1 = 0$$

$$\therefore x^2 = -1 \text{ (has no solution in } \mathbb{R})$$

12

$$\text{The side length} = \sqrt{5} \text{ cm, } \sqrt{5} \notin \mathbb{Q}$$

13

$$\text{The edge length} = \sqrt[3]{1728} = \frac{6}{5} \text{ cm, } \frac{6}{5} \in \mathbb{Q}$$

14

$$\text{The total area of the cube} = 6l^2$$

$$13.5 = 6l^2 \quad \frac{13.5}{6} = l^2$$

$$\therefore l = \sqrt{\frac{13.5}{6}} = 1.5 \text{ cm, } 1.5 \in \mathbb{Q}$$

15

$$\text{The diagonal length} = \sqrt{6^2 + 6^2} = \sqrt{72} \text{ cm.}$$

16

$$\text{The side length} = \sqrt{32} \text{ cm.}$$

$$\begin{aligned} \text{The diagonal length} &= \sqrt{(\sqrt{32})^2 + (\sqrt{32})^2} \\ &= \sqrt{32 + 32} = \sqrt{64} = 8 \text{ cm.} \end{aligned}$$

17

$$\text{The length of the hypotenuse} = \sqrt{5^2 + 5^2} = \sqrt{50} \text{ cm.}$$

18

The diagonal length of the rectangle

$$= \sqrt{(5)^2 + (7)^2} = \sqrt{74} \text{ cm}$$

 \therefore The area of the square = the area of

$$\text{the rectangle} = 5 \times 7 = 35 \text{ cm}^2$$

$$\text{The side length of the square} = \sqrt{35} \text{ cm.}$$

$$\begin{aligned} \text{The diagonal length of the square} &= \sqrt{35 + 35} \\ &= \sqrt{70} \text{ cm.} \end{aligned}$$

19

Cubing the two sides then squaring them we find that

$$(\sqrt[3]{3})^3 = 3, 3^2 = 9, (\sqrt[3]{2})^3 = 2\sqrt{2}, (2\sqrt{2})^2 = 8$$

$$9 > 8 \quad \therefore \sqrt[3]{3} > \sqrt[3]{2}$$

20

 Let the other number = x

$$\therefore x^2 + 2^2 = 7$$

$$\therefore x^2 = 7 - 4 = 3$$

$$\therefore x = \pm\sqrt{3}$$

 \therefore The other number is $\sqrt{3}$ or $-\sqrt{3}$

$$10 \quad x = \frac{\sqrt{2}}{\sqrt{3}} \times \frac{\sqrt{3}}{\sqrt{3}} = \frac{\sqrt{6}}{3}, y = \frac{\sqrt{3}}{\sqrt{2}} \times \frac{\sqrt{2}}{\sqrt{2}} = \frac{\sqrt{6}}{2} \\ \therefore 6(x + y) = 6\left(\frac{\sqrt{6}}{3} + \frac{\sqrt{6}}{2}\right) = 6 \times \frac{\sqrt{6}}{3} + 6 \times \frac{\sqrt{6}}{2} \\ = 2\sqrt{6} + 3\sqrt{6} = 5\sqrt{6}$$

11

$$x = \frac{10}{\sqrt{5}} \times \frac{\sqrt{5}}{\sqrt{5}} = \frac{10\sqrt{5}}{5} = 2\sqrt{5}$$

$$y = 1\sqrt{5} + \sqrt{2}, z = 2\sqrt{2} + \sqrt{5}$$

$$\therefore (x - y + z)^2 \\ = (2\sqrt{5} - 1\sqrt{5} - \sqrt{2} + 2\sqrt{2} + \sqrt{5})^2 = (\sqrt{2})^2 = 2$$

12

We know that $(x + y)^2 = x^2 + 2xy + y^2$

$$\therefore x^2 + 2xy + y^2 = (2\sqrt{5} + \sqrt{2} + 2\sqrt{5} - \sqrt{2})^2 \\ = (4\sqrt{5})^2 = 16 \times 5 = 80$$

11

$$\therefore x = \sqrt{7} + \frac{1}{2} \times 2\sqrt{3} = \sqrt{7} + \sqrt{3}$$

$$\therefore y = \frac{1}{3} \times 3\sqrt{7} - \sqrt{3} = \sqrt{7} - \sqrt{3}$$

$$\begin{aligned}\therefore x^2 y^2 &= (xy)^2 = (\sqrt{7} + \sqrt{3})(\sqrt{7} - \sqrt{3})^2 \\ &= (7 - 3)^2 = 4^2 = 16\end{aligned}$$

14

The perimeter of $\triangle ABC$

$$= \sqrt{28} + 28\sqrt{\frac{1}{7}} + 5\sqrt{7}$$

$$= \sqrt{4 \times 7} + 4\sqrt{49 \times \frac{1}{7}} + 5\sqrt{7}$$

$$= 2\sqrt{7} + 4\sqrt{7} + 5\sqrt{7} = 11\sqrt{7} \text{ cm.}$$

$$1 \text{ The area of one square} = \frac{300}{6} = 50 \text{ cm}^2$$

$$\therefore \text{The side length of one square} = \sqrt{50} = 5\sqrt{2} \text{ cm.}$$

$$\begin{aligned}\therefore \text{The perimeter of the figure} &= 14 \times 5\sqrt{2} \\ &= 70\sqrt{2} \text{ cm.}\end{aligned}$$

$$2 \text{ The area of one square} = \frac{72}{6} = 12 \text{ cm}^2$$

$$\text{The side length of one square} = \sqrt{12} = 2\sqrt{3} \text{ cm}$$

$$\begin{aligned}\therefore \text{The perimeter of the figure} &= 14 \times 2\sqrt{3} \\ &= 28\sqrt{3} \text{ cm}\end{aligned}$$

$$3 \text{ The area of one square} = \frac{40}{5} = 8 \text{ cm}^2$$

$$\text{The side length of one square} = \sqrt{8} = 2\sqrt{2} \text{ cm}$$

$$\begin{aligned}\text{The perimeter of the figure} &= 12 \times 2\sqrt{2} \\ &= 24\sqrt{2} \text{ cm.}\end{aligned}$$

16

$$\begin{aligned}a^{x+y} &= a^x \times a^y = a^x + a^{-y} = 6 + \sqrt{3} = \frac{6}{\sqrt{3}} \times \frac{\sqrt{3}}{\sqrt{3}} \\ &= \frac{6\sqrt{3}}{3} = 2\sqrt{3}\end{aligned}$$

17

$$1 \frac{(\sqrt{5})^3 \times (\sqrt{5})^5}{(\sqrt{2})^6 \times (\sqrt{5})^0} = \frac{(\sqrt{5})^{3+5-0}}{(\sqrt{2})^6} = \frac{5}{8}$$

$$\begin{aligned}2 \frac{2\sqrt{2} \times (\sqrt{2})^3 \times (\sqrt{3})^3}{(\sqrt{3})^1} &= 2 \times (\sqrt{2})^2 \\ &= \frac{2}{(\sqrt{2})^2} = \frac{2}{2} = 1\end{aligned}$$

$$\begin{aligned}\therefore 3\sqrt{3} + \sqrt{4 \times \frac{1}{2}} + 3\sqrt{2} + 2\sqrt{3} - 5\sqrt{2} \\ = x\sqrt{2} + y\sqrt{3}\end{aligned}$$

$$3\sqrt{3} + \sqrt{2} + 3\sqrt{2} + 2\sqrt{3} - 5\sqrt{2} = x\sqrt{2} + y\sqrt{3}$$

$$\therefore -\sqrt{2} + 5\sqrt{3} = x\sqrt{2} + y\sqrt{3} \therefore x = -1, y = 5$$

Answers of Exercise 7

1

$$1) \sqrt{5} - \sqrt{3} \quad 2) 5 + 2\sqrt{7}$$

$$3) \therefore \sqrt{5} + \frac{2}{\sqrt{2}} = \sqrt{5} + \sqrt{2}$$

$$\therefore \text{The conjugate number} = \sqrt{5} - \sqrt{2}$$

2

$$1 \frac{5}{\sqrt{7} - \sqrt{2}} \times \frac{\sqrt{7} + \sqrt{2}}{\sqrt{7} + \sqrt{2}} = \frac{5(\sqrt{7} + \sqrt{2})}{7 - 2} = \sqrt{7} + \sqrt{2}$$

$$2 \frac{\sqrt{3}}{2 - \sqrt{3}} \times \frac{2 + \sqrt{3}}{2 + \sqrt{3}} = \frac{\sqrt{3}(2 + \sqrt{3})}{4 - 3} = 2\sqrt{3} + 3$$

$$3 \frac{\sqrt{7} + 3}{\sqrt{7} - 3} \times \frac{\sqrt{7} + 3}{\sqrt{7} + 3} = \frac{16 + 6\sqrt{7}}{7 - 9} = -8 - 3\sqrt{7}$$

3

$$\begin{aligned}x &= \frac{2}{\sqrt{7} - \sqrt{5}} \times \frac{\sqrt{7} + \sqrt{5}}{\sqrt{7} + \sqrt{5}} = \frac{2(\sqrt{7} + \sqrt{5})}{7 - 5} \\ &= \sqrt{7} + \sqrt{5}\end{aligned}$$

$$\begin{aligned}\therefore (x+y)^2 &= (\sqrt{7} + \sqrt{5} + \sqrt{7} - \sqrt{5})^2 \\ &= (2\sqrt{7})^2 = 28\end{aligned}$$

4

$$\begin{aligned}x^2 y^2 &= (xy)^2 = \left(\frac{4}{\sqrt{7} - \sqrt{3}} \times \frac{4}{\sqrt{7} + \sqrt{3}} \right)^2 \\ &= \left(\frac{16}{7 - 3} \right)^2 = 4^2 = 16\end{aligned}$$

5

$$\text{L.H.S} = \frac{4}{x} + 2x$$

$$= \frac{4}{\sqrt{5} + \sqrt{3}} + 2(\sqrt{5} + \sqrt{3})$$

$$= \frac{4(\sqrt{5} - \sqrt{3})}{(\sqrt{5} + \sqrt{3})(\sqrt{5} - \sqrt{3})} + 2(\sqrt{5} + \sqrt{3})$$

$$\begin{aligned}
 &= \frac{4(\sqrt{5}-\sqrt{3})}{2} + 2(\sqrt{5}+\sqrt{3}) \\
 &= 2(\sqrt{5}-\sqrt{3}) + 2(\sqrt{5}+\sqrt{3}) \\
 &= 2\sqrt{5} - 2\sqrt{3} + 2\sqrt{5} + 2\sqrt{3} \\
 &= 4\sqrt{5} \text{ R.H.S}
 \end{aligned}$$

6

$$\therefore b = \frac{1}{\sqrt{5}+\sqrt{2}} \times \frac{\sqrt{3}-\sqrt{2}}{\sqrt{3}-\sqrt{2}} = \frac{\sqrt{3}-\sqrt{2}}{3-2} = \sqrt{3}-\sqrt{2}$$

 We know that, $(a-b)(a+b) = a^2 - b^2$

$$\begin{aligned}
 &(\sqrt{3}+\sqrt{2}-\sqrt{3}+\sqrt{2})(\sqrt{3}+\sqrt{2}+\sqrt{3}-\sqrt{2}) \\
 &= 2\sqrt{2} \times 2\sqrt{3} = 4\sqrt{6}
 \end{aligned}$$

7

$$\therefore y = \frac{2}{\sqrt{5}-\sqrt{3}} \times \frac{\sqrt{5}+\sqrt{3}}{\sqrt{5}+\sqrt{3}} = \frac{2(\sqrt{5}+\sqrt{3})}{5-3} = \sqrt{5}+\sqrt{3}$$

$$\begin{aligned}
 x^2 + 2xy + y^2 &= (x+y)^2 \\
 &= (\sqrt{5}-\sqrt{3}+\sqrt{5}+\sqrt{3})^2 = (2\sqrt{5})^2 = 20
 \end{aligned}$$

8

$$\therefore y = \frac{3}{\sqrt{5}-\sqrt{2}} \times \frac{\sqrt{5}+\sqrt{2}}{\sqrt{5}+\sqrt{2}} = \frac{3(\sqrt{5}+\sqrt{2})}{5-2} = \sqrt{5}+\sqrt{2}$$

$$\therefore x = \sqrt{5}-\sqrt{2}$$

x and y are two conjugate numbers.

$$\begin{aligned}
 \therefore x^2 - 2xy + y^2 &= (x-y)^2 = (\sqrt{5}-\sqrt{2}-\sqrt{5}+\sqrt{2})^2 \\
 &= (-2\sqrt{2})^2 = 8
 \end{aligned}$$

9

$$\begin{aligned}
 x &= 3+\sqrt{5}, y = \frac{4}{3+\sqrt{5}} \times \frac{3-\sqrt{5}}{3-\sqrt{5}} = \frac{4(3-\sqrt{5})}{9-5} \\
 &= 3-\sqrt{5}
 \end{aligned}$$

x and y are two conjugate numbers

$$\therefore xy = (3+\sqrt{5})(3-\sqrt{5}) = 9-5=4$$

$$\begin{aligned}
 (a, x^2 + y^2 &= (x+y)^2 - 2xy \\
 &= (3+\sqrt{5}+3-\sqrt{5})^2 - 2 \times 4 = 36-8=28
 \end{aligned}$$

10

$$\therefore x = \frac{2}{\sqrt{5}-\sqrt{3}} \times \frac{\sqrt{5}+\sqrt{3}}{\sqrt{5}+\sqrt{3}} = \frac{2(\sqrt{5}+\sqrt{3})}{5-3} = \sqrt{5}+\sqrt{3}$$

$$\therefore y = \frac{2}{\sqrt{5}+\sqrt{3}} \times \frac{\sqrt{5}-\sqrt{3}}{\sqrt{5}-\sqrt{3}} = \frac{2(\sqrt{5}-\sqrt{3})}{5-3} = \sqrt{5}-\sqrt{3}$$

$$\begin{aligned}
 \therefore x^2 - xy + y^2 &= (x-y)^2 + xy \\
 &= (\sqrt{5}+\sqrt{3}-\sqrt{5}+\sqrt{3})^2 + (\sqrt{5}+\sqrt{3})(\sqrt{5}-\sqrt{3}) \\
 &= (2\sqrt{3})^2 + 2 = 14
 \end{aligned}$$

11

$$\begin{aligned}
 x+y &= \frac{\sqrt{5}+\sqrt{2}+\sqrt{5}-\sqrt{2}}{(\sqrt{5}+\sqrt{2})(\sqrt{5}-\sqrt{2})} \\
 &= \frac{2\sqrt{5}}{5-2} = \frac{2\sqrt{5}}{3} = \sqrt{5}
 \end{aligned}$$

12

$$\begin{aligned}
 \therefore a &= \frac{4}{\sqrt{7}-\sqrt{3}} \times \frac{\sqrt{7}+\sqrt{3}}{\sqrt{7}+\sqrt{3}} = \frac{4(\sqrt{7}+\sqrt{3})}{7-3} \\
 &= \sqrt{7}+\sqrt{3}
 \end{aligned}$$

$$\begin{aligned}
 \therefore b &= \frac{4}{\sqrt{7}+\sqrt{3}} \times \frac{\sqrt{7}-\sqrt{3}}{\sqrt{7}-\sqrt{3}} = \frac{4(\sqrt{7}-\sqrt{3})}{7-3} \\
 &= \sqrt{7}-\sqrt{3}
 \end{aligned}$$

$$\therefore \frac{a-b}{ab} = \frac{\sqrt{7}+\sqrt{3}-\sqrt{7}+\sqrt{3}}{(\sqrt{7}+\sqrt{3})(\sqrt{7}-\sqrt{3})} = \frac{2\sqrt{3}}{7-3} = \frac{\sqrt{3}}{2}$$

13

$$\therefore x = 2\sqrt{2}-\sqrt{3}, y = \frac{5}{2\sqrt{2}-\sqrt{3}}$$

$$\begin{aligned}
 y &= \frac{5}{2\sqrt{2}-\sqrt{3}} \times \frac{2\sqrt{2}+\sqrt{3}}{2\sqrt{2}+\sqrt{3}} = \frac{5(2\sqrt{2}+\sqrt{3})}{8-3} \\
 &= 2\sqrt{2}+\sqrt{3}
 \end{aligned}$$

x and y are conjugate numbers

$$\begin{aligned}
 \therefore \frac{x+y}{xy} &= \frac{2\sqrt{2}-\sqrt{3}+2\sqrt{2}+\sqrt{3}}{(2\sqrt{2}-\sqrt{3})(2\sqrt{2}+\sqrt{3})} \\
 &= \frac{4\sqrt{2}}{8-3} = \frac{4\sqrt{2}}{5}
 \end{aligned}$$

14

$$x = \frac{5\sqrt{2}+3\sqrt{5}}{\sqrt{5}} \times \frac{\sqrt{5}}{\sqrt{5}} = \frac{5\sqrt{10}+15}{5}$$

$$= \sqrt{10}+3$$

$$\therefore y = \frac{2\sqrt{5}-3\sqrt{2}}{\sqrt{2}} \times \frac{\sqrt{2}}{\sqrt{2}} = \frac{2\sqrt{10}-6}{2} = \sqrt{10}-3$$

$$\begin{aligned} (1) \quad x^2+y^2 &= (x+y)^2-2xy \\ &= (\sqrt{10}+3+\sqrt{10}-3)^2-2(\sqrt{10}+3)(\sqrt{10}-3) \\ &= (2\sqrt{10})^2-2 \times (10-9)=40-2=38 \end{aligned}$$

$$\begin{aligned} (2) \quad xy &= (\sqrt{10}+3)(\sqrt{10}-3)=10-9=1 \\ \therefore x^2+y^2 &= 38 \quad xy=1 \end{aligned}$$

15

$$x = \frac{1}{2+\sqrt{3}} \times \frac{2-\sqrt{3}}{2-\sqrt{3}} = \frac{2-\sqrt{3}}{4-3} = 2-\sqrt{3}$$

$$\therefore y = \frac{12}{\sqrt{3}} \times \frac{\sqrt{3}}{\sqrt{3}} = \frac{12\sqrt{3}}{3} = 4\sqrt{3}$$

$$\begin{aligned} x^2+y &= (2-\sqrt{3})^2+4\sqrt{3} \\ &= 4-4\sqrt{3}+3+4\sqrt{3}=7 \end{aligned}$$

16

$$\therefore y = \sqrt{3}-\sqrt{2}$$

$$\therefore x = \frac{1}{\sqrt{3}-\sqrt{2}} \times \frac{\sqrt{3}+\sqrt{2}}{\sqrt{3}+\sqrt{2}} = \sqrt{3}+\sqrt{2}$$

$$\begin{aligned} \therefore (x+y)^2 &= (\sqrt{3}+\sqrt{2}+\sqrt{3}-\sqrt{2})^2 \\ &= (2\sqrt{3})^2=12 \end{aligned}$$

17

$$\therefore xy=1$$

$$y = \frac{1}{x} = \frac{1}{\sqrt{13}+\sqrt{6}} = \frac{1}{\sqrt{13}+\sqrt{6}} \times \frac{\sqrt{13}-\sqrt{6}}{\sqrt{13}-\sqrt{6}}$$

$$= \frac{\sqrt{13}-\sqrt{6}}{7}$$

$$x^2-49y^2 = (x-7y)(x+7y)$$

$$= \left(\sqrt{13}+\sqrt{6}-7\left(\frac{\sqrt{13}-\sqrt{6}}{7}\right) \right)$$

$$\left(\sqrt{13}+\sqrt{6}+7\left(\frac{\sqrt{13}-\sqrt{6}}{7}\right) \right)$$

$$= (\sqrt{13}+\sqrt{6}-\sqrt{13}+\sqrt{6})(\sqrt{13}+\sqrt{6}+\sqrt{13}-\sqrt{6})$$

$$= 2\sqrt{6} \times 2\sqrt{13} = 4\sqrt{78}$$

18

$$x = \frac{4(\sqrt{7}+\sqrt{3})}{(\sqrt{7}-\sqrt{3})(\sqrt{7}+\sqrt{3})} = \frac{4(\sqrt{7}+\sqrt{3})}{7-3}$$

$$= \sqrt{7}+\sqrt{3}$$

$$y = \sqrt{7}-\sqrt{3}$$

x and y are two conjugate numbers.

$$\begin{aligned} x^2-y^2 &= (x+y)^2-[(\sqrt{7}+\sqrt{3})(\sqrt{7}-\sqrt{3})]^2 \\ &= (7-3)^2-4^2=16 \end{aligned}$$

19

$$\therefore y = \frac{2}{\sqrt{7}+\sqrt{5}} \times \frac{\sqrt{7}-\sqrt{5}}{\sqrt{7}-\sqrt{5}} = \frac{2(\sqrt{7}-\sqrt{5})}{7-5}$$

$$= \sqrt{7}-\sqrt{5}$$

$$\therefore \frac{x+y}{xy} = \frac{\sqrt{7}+\sqrt{5}+\sqrt{7}-\sqrt{5}}{(\sqrt{7}+\sqrt{5})(\sqrt{7}-\sqrt{5})} = \frac{2\sqrt{7}}{7-5} = \sqrt{7}$$

20

$$x = \frac{\sqrt{6}+\sqrt{5}}{\sqrt{6}-\sqrt{5}} \times \frac{\sqrt{6}+\sqrt{5}}{\sqrt{6}+\sqrt{5}} = \frac{11+2\sqrt{30}}{6-5}$$

$$= 11+2\sqrt{30}$$

$$\therefore \frac{1}{x} = \frac{1}{11+2\sqrt{30}} \times \frac{11-2\sqrt{30}}{11-2\sqrt{30}} = \frac{11-2\sqrt{30}}{121-120}$$

$$= 11-2\sqrt{30}$$

$$\therefore x + \frac{1}{x} = 11+2\sqrt{30}+11-2\sqrt{30}=22$$

21

$$(1) 4$$

$$(2) 3-\sqrt{2}, 7$$

$$\textcircled{11} \sqrt[3]{3} - \sqrt[3]{24} + \sqrt[3]{27 \times \frac{1}{9}} = \sqrt[3]{3} - 2\sqrt[3]{3} + \sqrt[3]{3} = \text{zero}$$

6

$$\textcircled{1} \frac{7}{3} \times 3\sqrt[3]{2} + 3\sqrt[3]{2} - 7\sqrt[3]{2} + 2\sqrt[3]{2}$$

$$= 7\sqrt[3]{2} + 3\sqrt[3]{2} - 7\sqrt[3]{2} + 2\sqrt[3]{2} = 5\sqrt[3]{2}$$

$$\textcircled{2} 3\sqrt[3]{3} + \frac{1}{3} \times 3 - 3\sqrt[3]{9 \times \frac{1}{3}} - 1$$

$$= 3\sqrt[3]{3} + 1 - 3\sqrt[3]{3} - 1 = \text{zero}$$

$$\textcircled{3} -2\sqrt[3]{2} + \frac{14}{\sqrt[3]{7}} \times \frac{\sqrt[3]{7}}{\sqrt[3]{7}} - 2\sqrt[3]{7} + 3\sqrt[3]{2}$$

$$= -2\sqrt[3]{2} + 2\sqrt[3]{7} - 2\sqrt[3]{7} + 3\sqrt[3]{2} = \sqrt[3]{2}$$

$$\textcircled{4} 3\sqrt[3]{2} + 3\sqrt[3]{2} - \sqrt[3]{\frac{216}{12}} - 2\sqrt[3]{2}$$

$$= 3\sqrt[3]{2} + 3\sqrt[3]{2} - \sqrt[3]{18} = 3\sqrt[3]{2} + 3\sqrt[3]{2} - 3\sqrt[3]{2} = 3\sqrt[3]{2}$$

$$\textcircled{5} 5\sqrt[3]{2} - \frac{1}{2} \times 10\sqrt[3]{2} + \sqrt[3]{125} = 5\sqrt[3]{2} - 5\sqrt[3]{2} + 5 = 5$$

7

$$4\sqrt[3]{2} (3\sqrt[3]{4} + 10\sqrt[3]{4} - \sqrt[3]{\frac{8}{2}})$$

$$= 4\sqrt[3]{2} (3\sqrt[3]{4} + 10\sqrt[3]{4} - \sqrt[3]{4})$$

$$= 4\sqrt[3]{2} \times 12\sqrt[3]{4} = 48\sqrt[3]{8} = 96$$

Algebra and Statistics

13

∴ The edge length of one cube $= \sqrt[3]{24} = 2\sqrt[3]{3}$ dm

The area of one face of one cube

$$= 2\sqrt[3]{3} \times 2\sqrt[3]{3} = 4\sqrt[3]{9} \text{ dm}^2$$

The area of the using ground

$$= 5 \times 4\sqrt[3]{9} = 20\sqrt[3]{9} \text{ dm}^2$$

14

$$\text{L.H.S.} = x^2 + y^2 - (x+y)^2 - 2xy$$

$$= (\sqrt{2} + 1 + \sqrt{2} - 1)^2 - 2(\sqrt{2} + 1)(\sqrt{2} - 1)$$

$$= (2\sqrt{2})^2 - 2((\sqrt{2})^2 - 1)$$

$$= 4\sqrt{4} - 2\sqrt{4} + 2 = 2\sqrt{4} + 2 = \text{R.H.S.}$$

15

$$\frac{2}{\sqrt{2}} = \frac{2 \times \sqrt{4}}{\sqrt{2} \times \sqrt{4}} = \frac{2\sqrt{4}}{\sqrt{8}} = \frac{2\sqrt{4}}{2} = \sqrt{4}$$

Another solution: $\frac{2}{\sqrt{2}} = \frac{\sqrt{8}}{\sqrt{2}} = \sqrt{\frac{8}{2}} = \sqrt{4}$

Answers of Exercise 9

1

$$1 \text{ } 125 \quad 2 \text{ } 96 \quad 3 \text{ } 4 \text{ } 1^2 \quad 4 \text{ } 6 \text{ } 1^2 \quad 5 \text{ } 8 \text{ } 1^3$$

2

Area of one face $= \frac{36}{4} = 9 \text{ cm}^2$

The edge length of the cube $= \sqrt{9} = 3 \text{ cm}$

1 Its total area $= 6 \ell^2 = 6 \times 3^2 = 54 \text{ cm}^2$

2 Its volume $= \ell^3 = 3^3 = 27 \text{ cm}^3$

3

The edge length of the cube $= \sqrt[3]{\frac{12}{4}} = 3 \text{ cm}$

1 Its volume $= \ell^3 = 3^3 = 27 \text{ cm}^3$

2 Its lateral area $= 4 \ell^2 = 4 \times 3^2 = 36 \text{ cm}^2$

4

The edge length of the cube $= \sqrt[6]{\frac{60}{12}} = 5 \text{ cm}$

1 Its volume $= \ell^3 = 5^3 = 125 \text{ cm}^3$

2 Its total area $= 6 \ell^2 = 6 \times 5^2 = 150 \text{ cm}^2$

5

1 d	2 c	3 d	4 a	5 b
6 d	7 b	8 d	9 a	

6

1 The volume of the cuboid $= X \times y \times z$

$$= 9 \times 10 \times 5 = 450 \text{ cm}^3$$

2 Its lateral area $= 2(X+y) \times z = 2(9+10) \times 5$

$$= 190 \text{ cm}^2$$

3 Its total area $= 2(Xy + yz + zX)$

$$= 2(9 \times 10 + 10 \times 5 + 5 \times 9)$$

$$= 2(90 + 50 + 45) = 370 \text{ cm}^2$$

7

The volume $= X \times y \times z = \sqrt{2} \times \sqrt{3} \times \sqrt{6} = 6 \text{ cm}^3$

8

The area of the base $= \sqrt{3}(\sqrt{3}-1) = (3-\sqrt{3}) \text{ cm}^2$

The volume = the area of the base \times height

$$= (3-\sqrt{3})(3+\sqrt{3}) = 9-3 = 6 \text{ cm}^3$$

9

The lateral area = the perimeter of the base \times height

The height $= \frac{480}{4 \times 10} = 12 \text{ cm}$

10

The area of the base $\times \frac{\text{volume}}{\text{height}} = \frac{720}{5} = 144 \text{ cm}^2$

The side length of the base $= \sqrt{144} = 12 \text{ cm}$

∴ The total area $= 2(Xy + yz + zX)$

$$= 2 \times (12 \times 12 + 12 \times 5 + 12 \times 5)$$

$$= 528 \text{ cm}^2$$

11

The area of the face of the cube $= \frac{294}{6} = 49 \text{ cm}^2$

The edge length $= \sqrt{49} = 7 \text{ cm}$

∴ The volume of the cube $= \ell^3 = 7 \times 7 \times 7 = 343 \text{ cm}^3$

∴ the volume of the cuboid $= X \times y \times z$

$$= 7\sqrt{2} \times 5\sqrt{2} \times 5$$

$$= 350 \text{ cm}^3$$

The volume of the cuboid is greater than the volume of the cube

12

The volume of the cuboid = $X \times y \times z = 17 \times 7 \times 4$
 $= 476 \text{ cm}^3$

∴ the total area = $2(X + y) \times z + Xy$
 $= 2(17 + 7) \times 4 + (17 \times 7)$
 $= 192 + 119 = 311 \text{ cm}^2$

13

The circumference of the circle = $2\pi r$
 $= 2 \times \frac{22}{7} \times 10.5$
 $= 66 \text{ cm}$

The area of the circle = $\pi r^2 = \frac{22}{7} \times (10.5)^2$
 $= 346.5 \text{ cm}^2$

14

∴ The area of the circle = πr^2
 $154 = \frac{22}{7} r^2$ $r^2 = \frac{154 \times 7}{22} = 49$
 $r = \sqrt{49} = 7 \text{ cm}$

The circumference = $2\pi r = 2 \times \frac{22}{7} \times 7 = 44 \text{ cm}$

The diameter length = $2 \times 7 = 14 \text{ cm}$

15

The area of the circle = πr^2
 $64\pi = \pi r^2$ $r^2 = 64$
 $\therefore r = \sqrt{64} = 8 \text{ cm}$

The circumference of the circle = $2\pi r$
 $= 2 \times 3.14 \times 8 \approx 50 \text{ cm}$

16

The area of the circle = $2 \times 12.32 = 24.64 \text{ cm}^2$
 $\therefore \pi r^2 = 24.64$ $\therefore r^2 = 24.64 \times \frac{7}{22} = 7.84$
 $r = \sqrt{7.84} = 2.8 \text{ cm}$

∴ The perimeter of the figure = $\pi r + 2r$
 $= \frac{22}{7} \times 2.8 + 2 \times 2.8 = 14.4 \text{ cm}$

17

The area of the shaded part = the area of the great circle
 - the area of the small circle = $\pi r_1^2 - \pi r_2^2$
 $= \pi \times 25 - \pi \times 9 = 16\pi \text{ cm}^2$

18

Let the radius length of the circle = $X \text{ cm}$
 The side length of the square = $2X \text{ cm}$

∴ The area of the shaded part

$$= \frac{\text{the area of the square} - \text{the area of the circle}}{2}$$

$$= \frac{4 \times \frac{22}{7} \times \frac{22}{7} - 10 \times \frac{22}{7}}{2}$$

$$= \frac{4 \times \frac{22}{7} \times \frac{22}{7} - \frac{22}{7} \times 10}{2} = \frac{75}{7} \times 2$$

$$= \frac{6}{7} \times \frac{22}{7} \times \frac{50}{7} \quad \lambda^2 = \frac{50}{7} \times \frac{2}{6} = 25$$

$$\lambda = \sqrt{25} = 5 \text{ cm}$$

The perimeter of the shaded part

$$= \frac{1}{2} \text{ the circumference of the circle}$$

$$+ \frac{1}{2} \text{ the perimeter of the square.}$$

$$= \frac{1}{2} \times 5 \times 20 = 35 \frac{5}{7} \text{ cm.}$$

19

In the right-angled triangle ABD at A,

$$\therefore (AB)^2 + (AD)^2 = (BD)^2 \text{ (but } AB = AD)$$

$$\therefore 2(AB)^2 = (14)^2 \quad \therefore (AB)^2 = \frac{196}{2} = 98$$

$$\therefore AB = \sqrt{98} = 7\sqrt{2} \text{ cm.}$$

The area of the shaded part

$$= \frac{\text{the area of the circle} - \text{the area of the square}}{4}$$

$$= \frac{\frac{22}{7} \times (7\sqrt{2})^2 - 7\sqrt{2} \times 7\sqrt{2}}{4} = \frac{154 - 98}{4} = 14 \text{ cm}^2$$

The perimeter of the shaded part

$$= \frac{1}{4} \text{ the circumference of the circle}$$

$$+ \text{side length of the square}$$

$$= \frac{1}{4} \times 2 \times \frac{22}{7} \times 7 + 7\sqrt{2} = (11 + 7\sqrt{2}) \text{ cm}$$

20

The volume of the cylinder = $\pi r^2 h$

$$= \frac{22}{7} \times (14)^2 \times 20 = 12320 \text{ cm}^3$$

The total area of the cylinder = $2\pi rh + 2\pi r^2$

$$= 2 \times \frac{22}{7} \times 14 \times 20 + 2 \times \frac{22}{7} \times (14)^2 = 2992 \text{ cm}^2$$

21

The volume of the cylinder = $\pi r^2 h$

$$\therefore 924 = \frac{22}{7} \times r^2 \times 6$$

$$r^2 = \frac{924 \times 7}{6 \times 22} = 49 \quad \therefore r = 7 \text{ cm}$$

$$\therefore \text{The lateral area} = 2\pi r h = 2 \times \frac{22}{7} \times 7 \times 6$$

$$= 264 \text{ cm}^2$$

22

The volume of the cylinder = $\pi r^2 h$

$$7536 = 3.14 \times r^2 \times 24$$

$$\therefore r^2 = \frac{7536}{3.14 \times 24} = 100 \quad \therefore r = 10 \text{ cm}$$

$$\therefore \text{The total area} = 2\pi r h + 2\pi r^2$$

$$= 2 \times 3.14 \times 10 \times 24 + 2 \times 3.14 \times (10)^2 = 2135.2 \text{ cm}^2$$

23

The volume of the cylinder = $\pi r^2 h$

$$= \frac{22}{7} \times (7)^2 \times 10 = 1540 \text{ cm}^3$$

$$\text{The volume of the cube} = l^3 = (11)^3 = 1331 \text{ cm}^3$$

The volume of the cylinder is greater than the volume of the cube

24

$$1) 2\pi r h, \pi r^2 h \quad 2) 2 \text{ cm} \quad 3) 20 \text{ cm}$$

$$4) r \text{ cm}$$

$$5) r \text{ cm}$$

25

The circumference of the base = $2\pi r$

$$\therefore 44 = 2 \times \frac{22}{7} \times r$$

$$r = \frac{44 \times 7}{2 \times 22} = 7 \text{ cm}$$

The volume of the cylinder = $\pi r^2 h$

$$= \frac{22}{7} \times (7)^2 \times 25 = 3850 \text{ cm}^3$$

26

The lateral area = $2\pi r h$

$$\therefore 52 = 2 \times \frac{22}{7} \times 4 \times h$$

$$h = \frac{52 \times 7}{2 \times 22 \times 4} = \frac{91}{44} \text{ cm}$$

\therefore The volume of the cylinder = $\pi r^2 h$

$$= \frac{22}{7} \times 4^2 \times \frac{91}{44} = 104 \text{ cm}^3$$

27

\therefore The volume of the cylinder = $\pi r^2 h$

$$36\pi = \pi \times r^2 \times 4$$

$$r^2 = \frac{36}{4} = 9 \quad r = 3 \text{ cm}$$

The edge length of the cube = 3 cm

$$\therefore \text{The total area of the cube} = 6l^2 = 6 \times 3^2 = 54 \text{ cm}^2$$

28

The volume of the cylinder = $\pi r^2 h$

$$h = r$$

The volume of the cylinder = πr^3

$$72\pi = \pi r^3 \quad \therefore r^3 = 72 \quad r = 2\sqrt[3]{9}$$

$$\text{The height of the cylinder} = 2\sqrt[3]{9} \text{ cm}$$

29

The volume of the tank = the volume of the cuboid

+ $\frac{1}{2}$ of the volume of the cylinder

$$= 7 \times 7 \times 14 + \frac{1}{2} \times \frac{22}{7} \times (3.5)^2 \times 14$$

$$= 686 + 269.5 = 955.5 \text{ m}^3$$

30

The circumference of the base of the cylinder = BC

$$\therefore 2\pi r = 44 \quad \therefore r = \frac{44 \times 7}{2 \times 22} = 7 \text{ cm}$$

The height = AB = 10 cm

$$\text{The volume} = \pi r^2 h = \frac{22}{7} \times (7)^2 \times 10 = 1540 \text{ cm}^3$$

31

The volume of the sphere = $\frac{4}{3}\pi r^3$

$$= \frac{4}{3} \times \frac{22}{7} \times (2)^3 = 38.808 \text{ cm}^3$$

The surface area of the sphere = $4\pi r^2$

$$= 4 \times \frac{22}{7} \times (2)^2 = 55.44 \text{ cm}^2$$

32

The volume of the sphere = $\frac{4}{3}\pi r^3$

$$4188 = \frac{4}{3} \times 3.141 \times r^3$$

$$\therefore r^3 = \frac{4188 \times 3}{4 \times 3.141} = 1000 \quad \therefore r = 10 \text{ cm}$$

The volume of the sphere = $\frac{4}{3}\pi r^3$

$$562.5\pi = \frac{4}{3}\pi r^3 \quad \therefore r^3 = \frac{562.5 \times 3}{4} = 421.875$$

$$r = \sqrt[3]{421.875} = 7.5 \text{ cm}$$

\therefore The surface area of the sphere

$$= 4\pi r^2 = 4 \times \pi \times (7.5)^2 = 225\pi \text{ cm}^2$$

34

$$1) h \quad 2) a \quad 3) \quad 4) c$$

$$5) b \quad 6) d \quad 7) b$$

35

The volume of the cylinder $\approx \pi r^2 h$

$$= \pi \times (4)^2 \times 18 = 288 \pi \text{ cm}^3$$

 \therefore The volume of the cylinder = the volume of the sphere.The volume of the sphere $= 288 \pi \text{ cm}^3$

$$\frac{4}{3} \pi r^3 = 288 \pi$$

$$r^3 = \frac{288 \times 3}{4} = 216$$

 \therefore The radius length of the sphere $= 6 \text{ cm}$.

36

The volume of the cylinder $= \pi r^2 h$

$$\therefore 7536 = 3 \cdot 14 \times r^2 \times 24$$

$$r^2 = \frac{7536}{3 \cdot 14 \times 24} = 100$$

$$r = \sqrt{100} = 10 \text{ cm.}$$

 \therefore the radius length of the sphere $=$ the radius length of the cylinder base

$$\therefore \text{The volume of the sphere} = \frac{4}{3} \times 3.14 \times (10)^3 \\ = 4186 \frac{2}{3} \text{ cm}^3$$

37

The volume of the cuboid $= 77 \times 24 \times 21 = 38808 \text{ cm}^3$

The volume of the cuboid = the volume of the sphere

$$38808 = \frac{4}{3} \pi r^3$$

$$r^3 = \frac{38808 \times 3}{4 \times 22} = 9261$$

$$r = \sqrt[3]{9261} = 21 \text{ cm}$$

38

The volume of the sphere $= \frac{4}{3} \pi (3)^3 = 36 \pi \text{ cm}^3$ \therefore The volume of the cylinder = the volume of the sphereThe volume of the cylinder $= 36 \pi \text{ cm}^3$

$$\therefore \pi r^2 h = 36 \pi \quad \therefore 9 \pi h = 36 \pi \quad h = 4 \text{ cm}$$

39

The sphere touches the six faces of the cube

The edge length of the cube $= 2r$ The volume of the sphere $= \frac{4}{3} \pi r^3$

$$\therefore 36 \pi = \frac{4}{3} \pi r^3 \quad \therefore r^3 = \frac{36 \times 3}{4} = 27$$

$$r = 3 \text{ cm}$$

The edge length of the cube $= 2 \times 3 = 6 \text{ cm}$

$$\text{The volume of the cube} = 6^3 = 216 \text{ cm}^3$$

40

The volume of the sphere

 $=$ the volume of 8 small spheres

$$\frac{4}{3} \pi r_1^3 = 8 \times \frac{4}{3} \pi r_2^3$$

$$(16.8)^3 = 8 r_2^3 \quad r_2^3 = \frac{16.8^3}{8}$$

$$r_2 = \frac{16.8}{2} = 8.4 \text{ cm}$$

41

The volume of the sphere $= \frac{4}{3} \pi (15)^3 = 4500 \pi \text{ cm}^3$

The volume of the cylinder

 $= \frac{4}{9}$ the volume of the sphere

$$\therefore \pi r^2 h = \frac{4}{9} \times 4500 \pi \quad \therefore r^2 \times 20 = 2000$$

$$r^2 = \frac{2000}{20} = 100 \quad \therefore r = \sqrt{100} = 10 \text{ cm.}$$

42

The sum of lengths of all edges $= 52 \text{ cm}$ \therefore the sum of the 4 heights $= 3 \times 4 = 12 \text{ cm}$ The sum of the remained edges $= 52 - 12 = 40 \text{ cm}$

The base is a square

The side length of the square $= \frac{40}{8} = 5 \text{ cm}$ The volume $= 5 \times 5 \times 3 = 75 \text{ cm}^3$

43

The volume of the metal = the outer volume

 $-$ the inner volume $= \frac{4}{3} \pi r_1^3 - \frac{4}{3} \pi r_2^3$

$$= \frac{4}{3} \times \pi \left\{ (3.5)^3 - (2.1)^3 \right\} = \frac{88}{21} \times 33.614 = 140.859 \text{ cm}^3$$

The mass of the metal $= 140.859 \times 20 = 2817 \text{ g}$

Answers of Exercise 10

1

$$1 \quad x = -5 \quad \text{The S.S.} = \{-5\}$$

$$[2] \quad \therefore 5x = 1 - 6 = -5 \quad x = \frac{-5}{5} = -1$$

$$\therefore \text{The S.S.} = \{-1\}$$

$$[3] \quad \therefore 2x = 3 - 4 = -1 \quad \therefore x = -\frac{1}{2}$$

∴ The S.S. = $\{-\frac{1}{5}\}$

4 $2x + 4 + 3 = 7$ $x = \frac{7-3}{2} = \frac{4}{2} = 2$
The S.S. = $\{2\}$

5 $4x + 1 = 9$ $4x = 9 - 1 = 8$ $x = \frac{8}{4} = 2$

∴ The S.S. = $\{\frac{3}{4}\}$

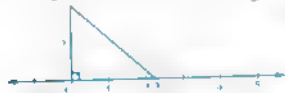

6 $\sqrt{5}x - 4 = 5$

$x = \frac{5+4}{\sqrt{5}} = \frac{9}{\sqrt{5}} = \sqrt{5}$

The S.S. = $\{\sqrt{5}\}$

The length of one side of the right angle = $\frac{5}{2} = 2.5$

The length of the hypotenuse = $\frac{5+1}{2} = 3$

7 $x + \sqrt{3} + 1 = 5$ The S.S. = $\{\sqrt{3} + 1\}$

The length of one side of the right angle = $\frac{5-1}{2} = 2$

The length of the hypotenuse = $\frac{4+1}{2} = 2.5$

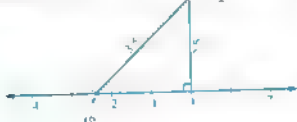

8 $2\sqrt{6}x = 8$ $\sqrt{6}x = 4$ $x = \frac{4}{\sqrt{6}} = \frac{2\sqrt{6}}{3}$

$x = \frac{4}{\sqrt{6}} \times \frac{\sqrt{6}}{\sqrt{6}} = \frac{4\sqrt{6}}{6} = \frac{2\sqrt{6}}{3}$

The S.S. = $\{\frac{2\sqrt{6}}{3}\}$

The length of one side of the right angle = $\frac{6-1}{2} = 2.5$

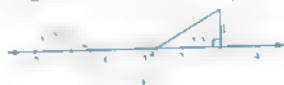

The length of the hypotenuse = $\frac{6+1}{2} = 3.5$

9 $x = 3 + 2\sqrt{3}$ The S.S. = $\{3 + 2\sqrt{3}\}$

The length of one side of the right angle = $\frac{3+1}{2} = 2$

The length of the hypotenuse = $\frac{3+1}{2} = 2$

2

1 a $2 < 3 < 4 < 5 < 6$

3

1 $x > 3$ The S.S. = $(3, \infty)$

2 $x \leq 2$ The S.S. = $(-\infty, 2]$

3 $x \leq 2$ The S.S. = $(-\infty, 2]$

4 $x > 2$ $x < 2$

The S.S. = $(-\infty, 2)$

5 $2x \geq 1$ $x \geq \frac{1}{2}$

The S.S. = $[\frac{1}{2}, \infty)$

6 $5 < x < 5$ $x > 1$

The S.S. = $(1, \infty)$

7 $\frac{1}{2}x \leq 1$ $x \leq 2$

The S.S. = $(-\infty, 2]$

8 $x \leq 4$ $x \geq 2$

The S.S. = $[2, 4]$

9

\because The weight of one box = 45 kg.

Let the number of boxes be X

Algebra and Statistics

\therefore the maximum weight that the lift can carry is 2200 kg

The weight of boxes \leq the maximum weight that the lift can carry

$$45x \leq 2200 \quad \therefore x \leq 48\frac{8}{9}$$

The maximum number of boxes can the lift carry in one time is 48 boxes

10

$$\because -4 < -2x < 2 \quad 2 > x > -1 \quad \therefore \text{The S.S.} =]-1, 2[$$

$$\sqrt{3} \approx 1.7 \quad \sqrt{3} \in]-1, 2[$$

11

$$a+3 \leq x \leq b+3 \quad \therefore \text{The S.S.} = [a+3, b+3]$$

$$[4, 7] = [a+3, b+3]$$

$$a+3 = 4 \quad \therefore a = 1$$

$$b+3 = 7 \quad b = 4$$

12

$$\because \frac{1}{5} \leq \frac{2x+1}{5} \leq 1 \quad \therefore 1 \leq 2x+1 \leq 5$$

$$0 \leq x \leq 4 \quad 0 \leq x \leq 2$$

$$\therefore \text{The S.S.} = [0, 2] \quad \therefore m = 0, m+n = 2 \quad n = 2$$

13

$$\because 5 \leq \frac{2x}{3} + 1 \leq 7 \quad \therefore 4 \leq \frac{2x}{3} \leq 6$$

$$12 \leq 2x \leq 18 \quad \therefore 6 \leq x \leq 9$$

$$\therefore 4 \leq x-2 \leq 7 \quad \therefore \text{The smallest value of } x-2 \text{ is } 4$$

14

Multiply both sides by $(\sqrt{3}-\sqrt{5})$

$$x \leq (\sqrt{3}+\sqrt{5})(\sqrt{3}-\sqrt{5})$$

"Note that the sign changed because $(\sqrt{3}-\sqrt{5})$ is a negative number because $\sqrt{3} < \sqrt{5}$ "

$$x \leq -2 \quad \text{The S.S.} =]-\infty, -2]$$

Answers of Unit Two

Answers of Exercise 11

1 $(5, 14), (2, 5), (0, -1), (-3, -10)$

2 The ordered pair $(-1, 3)$ satisfies the relation

3 1 $(1, -3), (2, -1), (3, 1), (4, 5)$

2 $(0, 5), (2, 6), (4, 7), (6, 8)$

3 $(0, 2), (3, 2), (5, 2), (-4, 2)$

4 $(2.5, 7), (2.5, 3), (2.5, -7), (2.5, 4)$

There are other solutions

4 1

x	0	1	2	3
y	1	5	9	13

2

x	-4	-3	-2
y	-5	0	5

3

a	1	4	3
b	-3	0	-1

4

a	2	5	-1
b	-1	0	-2

5 1 7 2 -9 3 zero 4 -1

6 $(3, 6)$ satisfies the relation $y = kx$
 $6 = 3k$ $\therefore k = 2$

7 $(3, 1)$ satisfies the relation $y - 3x = a$
 $\therefore 1 - 3 \times 3 = a$ $a = -8$

8 $(-3, 2)$ satisfies the relation $3x + by = 1$
 $3 \times (-3) + b \times 2 = 1$ $2b = 9 + 1$
 $2b = 10$ $\therefore b = 5$

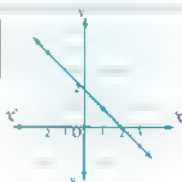

9 $(3, a)$ satisfies the relation $y - 2x = 4$
 $a - 2 \times 3 = 4$ $\therefore a = 10$

10 $(k, 2k)$ satisfies the relation $x + y = 15$
 $\therefore k + 2k = 15$ $\therefore 3k = 15$ $k = 5$

11 1 $x = 3$ 2 $y = \text{zero}$

12 1

x	1	3	2
y	1	2	4

2

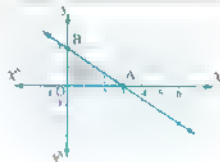

x	0	3	1
y	3	0	4

From [3] to [8] represent the relations graphically by yourself

13 $y = \frac{2}{3}x + 2$

x	0	3	6
y	2	0	-2

From the graph :

The area of $\triangle OAB = \frac{1}{2} \times 3 \times 2 = 3$ square units

14 The straight line intersects X-axis at $(3, b)$
 $b = 0$

$(3, 0)$ satisfies the relation $2x - y = a$
 $2 \times 3 - 0 = a$ $\therefore a = 6$

15

1) b	2) c	3) b	4) b
5) d	6) a	7) b	8) a
9) d	10) c	11) c	12) c
13) c	14) c		

16 Let the first number be x and the second be y
 $2x + y = 12$ $\therefore y = 12 - 2x$ The two numbers are even natural numbers
 x has the values 0, 2, 4, 6 then we can register the different possibilities to the two numbers in the following table :

x	0	2	4	6
y	12	8	4	0

17 Let the length of the rectangle = x cm and the width = y cm.
 $\therefore x > y$ \therefore the perimeter of the rectangle = 14 cm.

$2(x + y) = 14$ $\therefore x + y = 7$

We can record the different possibilities of the length and the width of the rectangle in the opposite table.

x	6	5	4
y	1	2	3

- 18 Let the number of bills of L.E. 5 be x , then its value = $5x$

and let the number of bills of L.E. 20 be y
 then its value = $20y$

$$5x + 20y = 65 \text{ where } x \text{ and } y \text{ are natural numbers}$$

$$\therefore x + 4y = 13$$

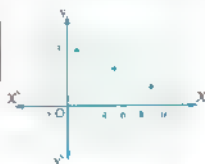

$$\therefore y = \frac{13-x}{4}$$

$$\therefore x \leq 10 \text{ , } (13-x) \text{ is divisible by 4}$$

i.e. x has the values 9, 5 and 1

then we can write the different possibilities in the following table :

x	1	5	9
y	3	2	1

- 19 Let the store sold in this week x computer's table and y chairs

$$100x + 50y = 500$$

where x and y are two natural numbers.

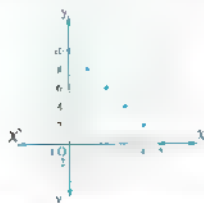

$$\therefore 2x + y = 10$$

$$\therefore y = 10 - 2x$$

x is not more than 5

We can write the expectations which represent the number of computer's tables and the number of chairs in the following table :

x	0	1	2	3	4	5
y	10	8	6	4	2	0

- 20 Let the length of any of the two congruent sides in the triangle be x cm and the length of the third side be y cm

$$\therefore \text{the perimeter of the triangle} = 19$$

$$\therefore 2x + y = 19$$

$$\therefore y = 19 - 2x$$

x and y are positive integers then x is not more than 9 and from the inequality of the triangle then x has the values 5, 6, 7, 8 and 9

then we can write all the possibilities in the following table

x	5	6	7	8	9
y	9	7	5	3	1

Answers of Exercise 12

1

figure (1) the slope is positive

figure (2) the slope is negative.

figure (3) the slope is undefined.

figure (4) the slope equals zero.

2

1. negative 2. zero 3. undefined 4. positive

3

1. zero 2. undefined 3. x -axis 4. \overline{BC} or \overline{AC}

4

1 the slope of $\overline{AB} = \frac{4-3}{1} = 1$

2 the slope of $\overline{AB} = \frac{0-2}{1} = -2$

3 the slope of $\overline{AB} = \frac{5-2}{3} = 1$

4 the slope of $\overline{AB} = \frac{1+1}{2} = 1$

5 the slope of $\overline{AB} = \frac{3-3}{2} = 0$

6 the slope of $\overline{AB} = \frac{4-2}{5-5} = \frac{2}{\text{zero}}$ undefined

7 the slope of $\overline{AB} = \frac{2+1}{1-1} = \frac{3}{\text{zero}}$ undefined

8 the slope of $\overline{AB} = \frac{1+2}{4-3} = \frac{3}{1} = 3$

9 the slope of $\overline{AB} = \frac{1-3}{2+1} = \frac{-2}{3}$

10 the slope of $\overline{NK} = \frac{7+2}{1-4} = \frac{9}{-3} = -3$

11 the slope of $\overline{EO} = \frac{0+1}{0+3} = \frac{1}{3}$

12 the slope of $\overline{AB} = \frac{1+9}{1+6} = \frac{10}{7}$

1

1 Taking the two points $(0, 0)$ and $(1, 2)$ which lie on the straight line we find that :

$$\text{the slope} = \frac{2-0}{1-0} = 2$$

2 Taking the two points $(0, -1)$ and $(-2, 3)$ which lie on the straight line we find that

$$\text{the slope} = \frac{3-(-1)}{-2-0} = \frac{4}{-2} = -2$$

5

$m(\angle M) = 45^\circ$, $\triangle MNL$ is an isosceles triangle

$ML = LN$

The length of $\overline{ML} = 4$ units

The length of $\overline{LN} = 4$ units

$N = (3, 6)$

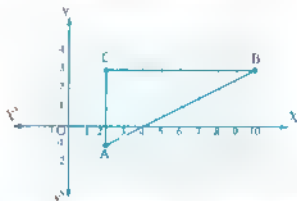

\therefore the slope of $\overline{MN} = \frac{6-2}{3-7} = \frac{4}{-4} = -1$

7

the slope of $\overline{AB} = \frac{3+1}{10-2} = \frac{1}{2}$

the slope of $\overline{BC} = \frac{3-3}{2-10} = 0$

the slope of $\overline{AC} = \frac{3+1}{2-2} = 0$ (undefined)

from the graph we find that $\triangle ABC$ is right-angled

8

The slope of the straight line which passes through the two points $(1, 3)$ and $(3, k)$ equals 3

$$\frac{k-3}{3-1} = 3 \quad \therefore \frac{k-3}{2} = 3$$

$$k-3 = 6 \quad k = 9$$

9

The slope of the straight line which passes through the two points $(3, c)$ and $(5, -2)$ equals -3

$$\frac{-2-c}{5-3} = -3 \quad \therefore \frac{-2-c}{2} = -3$$

$$-2-c = -6 \quad \therefore c = 4$$

10

$$-2 = \frac{2-4}{x-1} \quad -2 = \frac{-2}{x+1}$$

$$x+1 = 1 \quad x = 0$$

11

$$\frac{1}{3-2} = -0.6 \quad \frac{-1-y}{5} = -0.6$$

$$1-y = -3 \quad y = 2$$

12

The straight line is parallel to x -axis

$$\therefore \text{The slope} = 0 \quad \therefore \frac{k-4}{2-3} = 0$$

$$k-4 = 0 \quad k = 4$$

13

The straight line is parallel to y -axis

\therefore The slope is undefined

$$\therefore x_2 - x_1 = 0 \quad \therefore 6 - 2x = 0$$

$$2x = 6 \quad x = 3$$

14

The straight line is perpendicular to y -axis

The straight line is parallel to x -axis

$$\therefore \text{The slope} = 0 \quad \therefore y_2 - y_1 = 0$$

$$\therefore 3y - 6 = 0 \quad \therefore 3y = 6 \quad y = 2$$

15

The slope of the straight line passing through the two points $(-5, 11)$ and $(0, 8) = \frac{8-11}{0-(-5)} = \frac{-3}{5} = -\frac{3}{5}$ (1)

The slope of the straight line passing through the two points $(0, 8)$ and $(5, 5) = \frac{5-8}{5-0} = \frac{-3}{5} = -\frac{3}{5}$ (2)

from (1) and (2) we find that the three points are collinear

(lying on the straight line whose slope $= -\frac{3}{5}$)

16

$$\text{The slope of } \overline{AB} = \frac{2-1}{3-2} = 1$$

$$\text{the slope of } \overline{BC} = \frac{5-2}{4-3} = 3$$

and the slope of \overline{AC}

$$= \frac{5-1}{4-2} = 2$$

we observe that the three points are not collinear.

17

$$\therefore \text{The slope of } \overline{AB} = \frac{2-1}{2-1} = 1$$

$$\text{The slope of } \overline{BC} = \frac{-3-2}{-1-2} = 1$$

The slope of \overline{AB} is the slope of \overline{BC} and the point B is a common point.

The points A, B and C are collinear

Algebra and Statistics

- 2 The slope of $\overline{AB} = \frac{7 - \frac{3}{4}}{6 - \frac{1}{4}} = \frac{0}{10} = 0$
 The slope of $\overline{BC} = \frac{4 - \frac{7}{6}}{5 - \frac{1}{6}} = \frac{1}{11} \neq 0$
 The slope of \overline{AB} is the slope of \overline{BC} and the point B is a common point.
 The points A, B and C are collinear
- 3 The slope of $\overline{AB} = \frac{4 - \frac{12}{2}}{2 - \frac{1}{2}} = \frac{8}{4} = 2$
 The slope of $\overline{BC} = \frac{-4 - \frac{4}{2}}{6 - \frac{8}{2}} = \frac{8}{4} = 2$
 The slope of \overline{AB} is the slope of \overline{BC} and the point B is a common point.
 The points A, B and C are collinear

18

- 1 The slope of $\overline{AB} = \frac{0}{3 - 2} = -1$
 The slope of $\overline{BC} = \frac{-1 - 0}{5 - 3} = -\frac{1}{2}$
 The slope of $\overline{AB} \neq$ the slope of \overline{BC}
 The points A, B and C are not collinear.
- 2 The slope of $\overline{AB} = \frac{1 - \frac{2}{3}}{3 - \frac{1}{3}} = -\frac{1}{4}$
 The slope of $\overline{BC} = \frac{2 - \frac{1}{3}}{7 - \frac{1}{3}} = \frac{1}{4}$
 The slope of $\overline{AB} \neq$ the slope of \overline{BC}
 The points A, B and C are not collinear
- 3 The slope of $\overline{AB} = \frac{2 - (-3)}{2 - 0} = \frac{5}{2}$
 The slope of $\overline{BC} = \frac{-3 - \frac{2}{3}}{-3 - \frac{2}{3}} = 1$
 The slope of $\overline{AB} \neq$ the slope of \overline{BC}
 The points A, B and C are not collinear

19

- The slope of $\overline{AB} = \frac{5 - \frac{3}{2}}{2 - \frac{1}{2}} = \frac{7}{3}$
 The slope of $\overline{BC} = \frac{5 - \frac{1}{2}}{2 - \frac{8}{3}} = -\frac{2}{3}$
 The slope of $\overline{AB} \neq$ the slope of \overline{BC}
 C $\notin \overline{AB}$

20

- The slope of the straight line which passes through the two points (4, 1) and (-2, 7)
- $$= \frac{7 - 1}{-2 - 4} = \frac{6}{-6} = -1$$

The slope of the straight line which passes through the two points (-2, 7) and (3, 7)

$$= \frac{7 - 7}{3 - (-2)} = \frac{0}{5} = 0$$

The three points are collinear

$$\begin{aligned} \frac{y - 7}{5} &= 0 & \therefore y - 7 &= 0 \\ y &= -5 + 7 & \therefore y &= 2 \end{aligned}$$

21

The slope of the straight line which passes through the two points (3, -1) and (X, 1) equals $\frac{2}{3}$

$$\frac{1 - (-1)}{X - 3} = \frac{2}{3} \quad \therefore \frac{2}{X - 3} = \frac{2}{3}$$

$$\therefore X - 3 = 3 \quad \therefore X = 6$$

The slope of the straight line which passes through the two points (3, -1) and (9, 5) equals $\frac{2}{3}$

$$\begin{aligned} \frac{5 - (-1)}{9 - 3} &= \frac{2}{3} & \frac{y + \frac{2}{3}}{6} &= \frac{2}{3} & 3y + 3 &= 12 \\ y &= 0 & y &= 3 \end{aligned}$$

Answers of Exercise 13

1

$$\begin{aligned} \therefore \text{The uniform velocity} &= \frac{\text{the covered distance}}{\text{the taken time}} \\ &= \frac{180}{3} = 60 \text{ km/hr.} \end{aligned}$$

The covered distance = the taken time \times the uniform velocity = $60 \times 5 = 300$ km

2

The rate of consumption of fuel

$$\begin{aligned} &= \frac{\text{the amount of consumed fuel}}{\text{time}} \\ &= \frac{247}{3} = \frac{247}{300} \text{ litre/hr.} \end{aligned}$$

The consumed amount

$$\begin{aligned} &= \text{the rate of consumption} \times \text{time} \\ &= \frac{247}{300} \times 10 = 8 \frac{7}{30} \text{ litre.} \end{aligned}$$

3

- (1) At the moment of starting the motion, the body is at a distance of 2 metres from the fixed point
 At $t = 6$, the body is at a distance of 8 metres.
 Taking the two points (0, 2) and (6, 8) on the straight line which represents the relation between t and d

$$\therefore \text{the slope} = \frac{8-2}{6-0} = \frac{6}{6} = 1$$

it represents the velocity of the body within a going trip.

- 2) At the moment of starting the motion, the body is at a distance of 12 metres from the fixed point

At $t = 6$ the body is at a distance of 2 metres. Taking the two points $(0, 12)$ and $(6, 2)$ on the straight line representing the relation between t and d

$$\text{The slope} = \frac{2-12}{6-0} = \frac{-10}{6} = -\frac{5}{3}$$

It represents the velocity of the body within the returning back

- 3) On starting the motion, the body is at a distance of 8 metres from the fixed point

At $t = 6$ the body is at a distance of 8 metres

The straight line representing the relation is horizontal. \therefore The slope = zero

It means that the body is rest

Taking two points on the straight line representing the relation between t and d say $(0, 50)$ and $(4, 150)$

The uniform velocity = the slope of the straight line

$$\frac{150-50}{4-0} = \frac{100}{4} = 25 \text{ km/hr}$$

5

- 1) Taking two points on the straight line representing the relation between t and d say $(0, 50)$ and $(2, 200)$

The uniform velocity = the slope of the straight

$$\text{line} = \frac{200-50}{2-0} = 75 \text{ km/hr}$$

- 2) from the graph

The car is at a distance = 275 km from the point O after passing 3 hours from the moment of beginning the motion

- 1) The velocity within the first 3 hours = the slope of the straight line $\overline{OB} = \frac{125}{3} = 41\frac{2}{3} \text{ km/hr}$

The velocity within the next 2 hours = the slope of the straight line $\overline{BC} = \frac{125}{2} = 62\frac{1}{2} \text{ km/hr}$

- 2) The average velocity within the all trip

$$= \frac{\text{total distance}}{\text{total time}} = \frac{250}{5} = 50 \text{ km/hr.}$$

7

- 1) The velocity within the first 3 hours = the slope of the straight line = $\frac{60-20}{3-0} = \frac{40}{3} = 13\frac{1}{3} \text{ km/hr}$

- 2) The velocity within the next 4 hours = the slope of the straight line = $\frac{0-60}{7-3} = -\frac{60}{4} = -15 \text{ km/hr.}$

The negative sign means that the bicycle returns back with velocity 15 km/hr

The total distance = $40 + 60 = 100 \text{ km}$

8

- 1) The slope of the straight line \overline{AB}

$$= \frac{60-20}{4-0} = \frac{40}{4} = 10$$

It means the increasing of the capital within the first 4 years with rate equals 10 thousands pounds/year

$$\text{The slope of } \overline{BC} = \frac{60-60}{6-4} = \text{zero}$$

It means constancy of the capital within the fifth and sixth years.

$$\text{The slope of } \overline{CD} = \frac{50-60}{8-6} = -\frac{10}{2} = -5$$

It means decreasing of the capital within the 7th and 8th years with rate = 5 thousands/year.

- 2) The starting capital of the company = 20 thousand pounds.

9

- 1) The slope of $\overline{AB} = \frac{175-50}{8-0} = \frac{125}{8} = 15\frac{5}{8}$

It means that the increase in height goes with respect to the increase in age

$$\text{The slope of } \overline{BC} = \frac{175-125}{18-8} = \frac{50}{10} = 5$$

It means that the increase in height goes with respect to the increase in age but with a rate less than the rate within the first 8 years.

$$\text{The slope of } \overline{CD} = \frac{175-175}{22-18} = 0$$

It denotes the constancy in height inspite of the increase in age after 18 years.

- 2) \therefore The height of the person at age 30 years = 175 cm and the height of the person at age 8 years = 125 cm

The difference = $175 - 125 = 50 \text{ cm}$

10

1. The greatest capacity of the tank = 70 litre
2. The tank will be empty after 30 hours
3. The remained fuel = 35 litre
4. Taking the two points $(0, 70)$ & $(30, 0)$ on the straight line representing the relation.
 \therefore The rate of consumption of the fuel
 The slope of the straight line = $\frac{70-0}{0-30} = -2\frac{1}{3}$ litre/hr
 The negative sign means the rate of consumption
i.e. The amount of fuel is consumed with rate
 $2\frac{1}{3}$ litre/hr

11

1. 100 pages
2. Taking the two points $(0, 100)$ and $(3, 40)$ on the straight line representing the relation we find that the rate of decreasing the number of pages = the slope of the straight line
 $= \frac{40-100}{3-0} = -\frac{60}{3} = -20$ pages/hr
 The negative sign expresses the decreasing in the number of remained pages with rate 20 page/h.
3. The remained pages decreases with rate 20 page/h
 There are 100 pages
 The person finishes reading the book after
 $\frac{100}{20} = 5$ hours

12

1. The depth of the well before beginning digging = 5 m.
2. The depth of the well after finishing digging = 40 m.
3. The total time taken in digging = 10 hr
4. The average of digging the well in the first 5 hours = the slope of the straight line = $\frac{27.5-5}{5-0} = 4.5$ m/hr
5. The average of digging in the last two hours = the slope of the straight line
 $= \frac{40-27.5}{10-8} = 6.25$ m/hr.

13

1. The uniform velocity during the going trip = the slope of the straight line = $\frac{60-0}{3-0} = 20$ km/hr.
2. The average velocity during returning back = $\frac{\text{total distance}}{\text{total time}} = \frac{60}{5} = 12$ km/hr
3. It means that the bicycle stopped within the 6th hour from the beginning

14

- Let the covered distance be d km
 The amount of the remained fuel in the tank be y litre
 At the beginning the covered distance = zero
 The amount of remained fuel = 40 litre
 We express this by the point A $(0, 40)$

After covering distance

The amount of remained fuel

$$= \frac{3}{4} \times 40 = 30 \text{ litre}$$

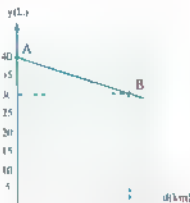

We express this by the point B $(120, 30)$

The rate of decreasing the amount of fuel = the slope of \overline{AB}

$$= \frac{30-40}{120-0} = -\frac{10}{120} = -\frac{1}{12}$$

- \therefore The amount of fuel decreases with the rate one litre for every 12 km

The distance covered by the car when the tank becomes empty = $12 \times 40 = 480$ km

15

1. 100 km
2. The train A took 2 hours
 the train B took $2\frac{1}{2}$ hours.
3. The average speed = $\frac{\text{total distance}}{\text{total time}}$
 with respect to the train A
 The average speed = $\frac{100}{2} = 50$ km/hr
 with respect to the train B
 the average speed = $\frac{100}{2.5} = 40$ km/hr
4. It means that the train A was at rest from half past ten till half past eleven

16

1. Tortoise
2. The velocity of the tortoise = $\frac{\text{the covered distance}}{\text{the taken time}}$
 $= \frac{100}{60} = 1\frac{2}{3}$ metre / minute.
3. The average velocity of the rabbit = $\frac{\text{total distance}}{\text{total time}}$
 $= \frac{100}{65} = 1\frac{7}{13}$ metre / minute.
4. It means that the rabbit was at rest from the tenth minute to 60th minute

17

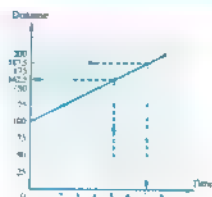

- 1 The velocity of the bicycle = the slope of the

$$\text{straight line} = \frac{200}{8} - \frac{125}{2} = 12.5 \text{ km/h}$$

- 2 300 minutes = 5 hours
then the bicycle is at
distance = 162.5 km

- 3 7 hours

- 4 From the graph
the starting point is
far from the fixed
point = 100 km

Answers of unit three

Answers of Exercise 15

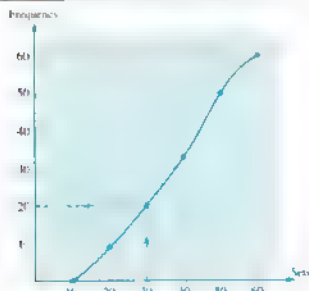

First : Problems on the ascending cumulative
frequency curve.

1

The upper boundaries of sets	Ascending cumulative frequency
less than 2	0
less than 6	3
less than 10	8
less than 14	17
less than 18	27
less than 22	39
less than 26	46
less than 30	50

The upper boundaries of sets	Ascending cumulative frequency
less than 10	0
less than 20	9
less than 30	20
less than 40	33
less than 50	50
less than 60	60

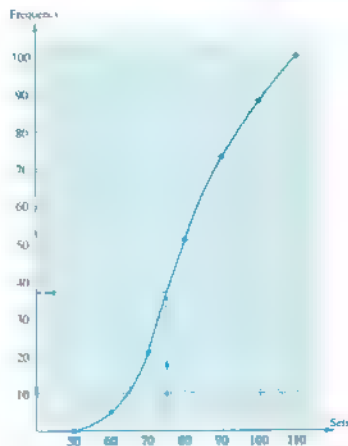

From the graph

The number of failed pupils = 20 pupils

3

The upper boundaries of sets	Ascending cumulative frequency
less than 50	0
less than 60	5
less than 70	21
less than 80	51
less than 90	73
less than 100	88
less than 110	100

2 From the graph, The number of factories which work less than 75 hours = 37 factories

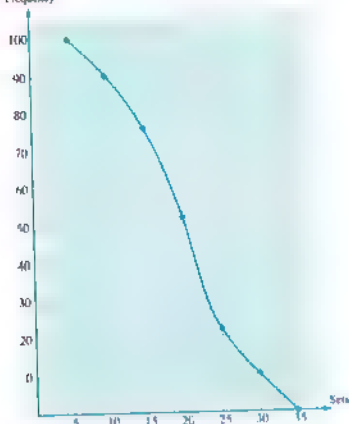

3 The percentage of the number of factories which work less than 75 hours

$$= \frac{37}{100} \times 100\% = 37\%$$

Second : Problems on the descending cumulative frequency curve

The lower limits of sets	Descending cumulative frequency
5 and more	100
10 and more	90
15 and more	76
20 and more	52
25 and more	22
30 and more	10
35 and more	0

Frequency

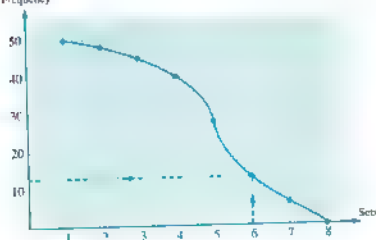

5

9

The lower boundaries of sets	Descending cumulative frequency
1 and more	50
2 and more	48
3 and more	45
4 and more	40
5 and more	28
6 and more	13
7 and more	6
8 and more	0

Frequency

2 From the graph : The number of pupils who study 6 hours and more daily = 13 pupils

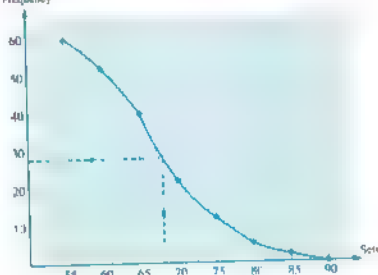

3 The percentage of the number of pupils who study 6 hours and more daily = $\frac{13}{50} \times 100\% = 26\%$

6

The missed value in the table = 10

The lower limits of sets	Descending cumulative frequency
55 and more	60
60 and more	52
65 and more	40
70 and more	22
75 and more	12
80 and more	5
85 and more	2
90 and more	0

Frequency

From the graph :

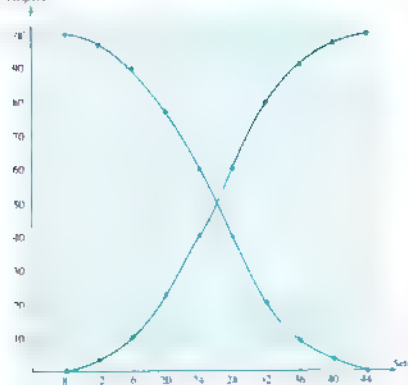

The number of persons whose weights are 68 kg and more = 28 persons

Third : Problems on the two curves together

7

The upper limits of sets	Ascending cumulative frequency	The lower limits of sets	Descending cumulative frequency
less than 8	0	8 and more	100
less than 12	4	12 and more	96
less than 16	11	16 and more	89
less than 20	23	20 and more	77
less than 24	41	24 and more	59
less than 28	61	28 and more	39
less than 32	80	32 and more	20
less than 36	91	36 and more	9
less than 40	97	40 and more	3
less than 44	100	44 and more	0

Frequency

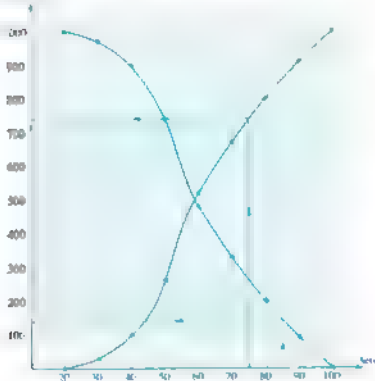

8

1

The upper boundaries of sets	Ascending cumulative frequency	The lower boundaries of sets	Descending cumulative frequency
less than 20	0	20 and more	1000
less than 30	30	30 and more	970
less than 40	100	40 and more	900
less than 50	260	50 and more	740
less than 60	520	60 and more	480
less than 70	670	70 and more	330

Total		100	3910

$$\text{The mean} = \frac{3910}{100} = 39.1$$

12

$$1) 3k + 4k = 50 \quad (7 + 10 + 8 + 4)$$

$$7k = 21 \quad \therefore k = \frac{21}{7} = 3$$

Algebra and Statistics

2

Sets	"x"	"f"	"x × f"
30 -	32.5	7	227.5
35 -	37.5	9	337.5
40 -	42.5	12	510
45 -	47.5	10	475
50 -	52.5	8	420
55 -	57.5	4	230
Total		50	2200

$$\text{The mean} = \frac{2200}{50} = 44 \text{ kg.}$$

13

$$1 \quad k - 2 = 50 - (4 + 5 + 8 + 7 + 5 + 1)$$

$$k - 2 = 20 \quad \therefore k = 22$$

2

Sets	"x"	"f"	"x × f"
2 -	4	4	16
6 -	8	5	40
10 -	12	8	96
14 -	16	20	320
18 -	20	7	140
22 -	24	5	120
26 -	28	1	28
Total		50	760

$$\text{The mean} = \frac{760}{50} = 15.2 \text{ days.}$$

14

∵ The total of marks of the student in 5 months
= $5 \times 23.8 = 119$ marks

∴ let the required mark of the sixth month be x

$$\therefore \frac{119 + x}{6} = 24 \quad \therefore 119 + x = 144$$

$$\therefore x = 144 - 119 = 25 \text{ marks}$$

∴ The mark of the student in the 6th month is 25

15

∵ The total of marks of Magdi in 4 exams

$$= 4 \times 16 = 64 \text{ marks}$$

$$\therefore \text{let the required mark be } x \quad \frac{64 + x}{5} = 18$$

$$\therefore 64 + x = 90 \quad x = 90 - 64 \quad x = 26 \text{ marks}$$

∴ The mark of Magdi in the 5th exam should be 26 marks

16

$$1 \quad a = \frac{0 + 4}{2} = 2 \quad b = \frac{40}{6} = 1\frac{2}{3} \quad c = \frac{300}{30} = 10$$

$$\therefore \frac{4 + d}{2} = 6 \quad d = 8$$

$$\therefore e = \frac{16 + 12}{2} = 14 \quad f = \frac{16 + 20}{2} = 18$$

$$\therefore x = 10 \times 18 = 180$$

$$\therefore y = 1140 - (10 + 90 + 300 + 180) = 560$$

$$\therefore z = \frac{560}{14} = 40$$

$$\therefore m = 5 + 15 + 30 + 40 + 10 = 100$$

$$2 \quad \text{The mean} = \frac{1140}{100} = 11.4 \text{ marks}$$

less than 17	330	17 and more	170
less than 18	410	18 and more	90
less than 19	480	19 and more	20
less than 20	500	20 and more	0

The median age ≈ 6.3 years

9

The upper limits of sets	Ascending cumulative frequency	The lower limits of sets	Descending cumulative frequency
less than 10	0	10 and more	90
less than 14	8	14 and more	82
less than 18	18	18 and more	72
less than 22	42	22 and more	48
less than 26	63	26 and more	27
less than 30	75	30 and more	15
less than 34	84	34 and more	6
less than 38	90	38 and more	0

From the graph we find that the median mark ≈ 22.5 marks

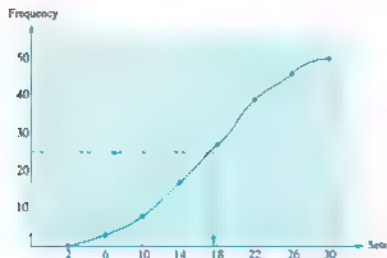

1

Sets	"X"	"f"	"X × f"
2 –	4	3	12
6 –	8	5	40
10 –	12	9	108
14 –	16	10	160
18 –	20	12	240
22 –	24	7	168
26 –	28	4	112
Total		50	840

$$\text{The mean} = \frac{840}{50} = 16.8$$

2 We form the ascending cumulative frequency table

The upper limits of sets	Ascending cumulative frequency
less than 2	0
less than 6	3
less than 10	8
less than 14	17
less than 18	27
less than 22	39
less than 26	46
less than 30	50

$$\therefore \text{The order of the median} = \frac{50}{2} = 25$$

$$\therefore \text{The median} \approx 17.6$$

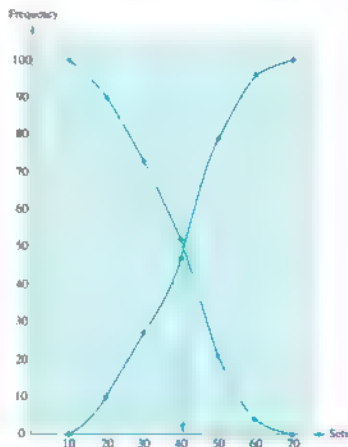

11

$$1) X = 30 + k + 2 = 100 - (10 + 17 + 20 + 32 + 4)$$

$$\therefore k + 2 = 17 \quad \therefore k = 15$$

2)

The upper limits of sets	Ascending cumulative frequency	The lower limits of sets	Descending cumulative frequency
less than 10	0	10 and more	100
less than 20	10	20 and more	90
less than 30	27	30 and more	73
less than 40	47	40 and more	53
less than 50	79	50 and more	21
less than 60	96	60 and more	4
less than 70	100	70 and more	0

 The median ≈ 41

Answers of Exercise 18

1 1) b

2) b

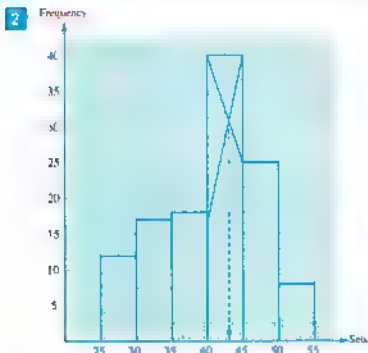

3) a

4) c

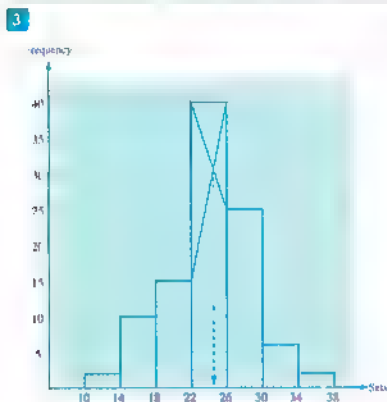

5) d

6) b

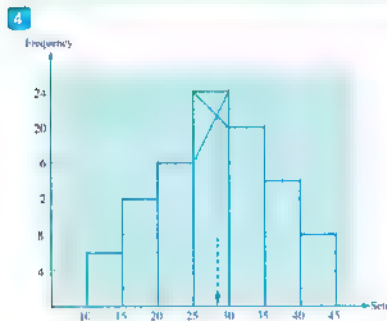

7) d

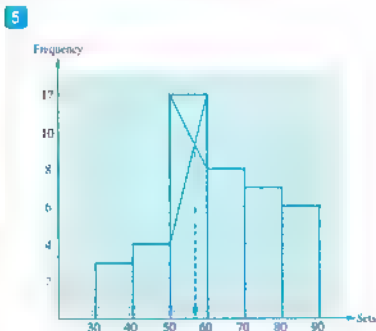

From the graph : The mode age = 43 years

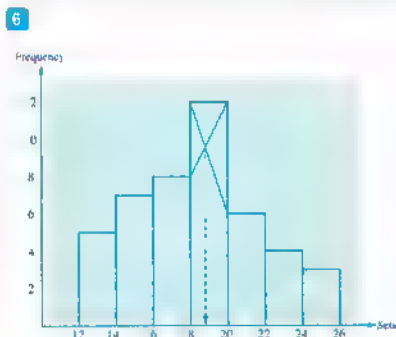

From the graph : The mode mark ≈ 24.5 marks.

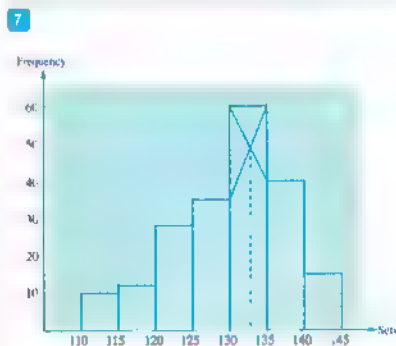

From the graph , The mode wage ≈ 28.5 pounds

From the graph : The mode = 57

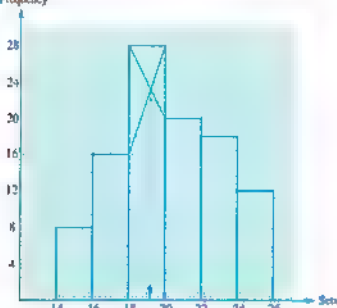

From the graph : The mode age ≈ 18.8 years

From the graph : The mode height ≈ 132.75 cm

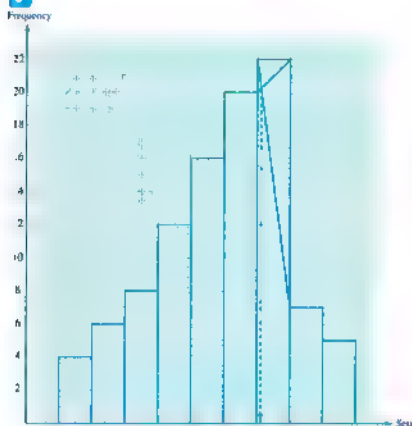

8 Frequency

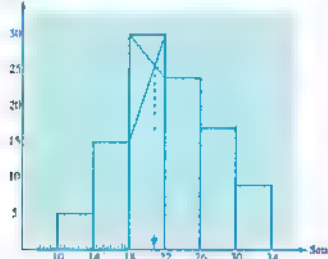

From the graph :

 The mode of the amount of milk ≈ 19.2 gallons

9 Frequency

 From the graph : The mode mark ≈ 45.5 marks

10 Frequency

 From the graph : The mode weight ≈ 20.8 kg.

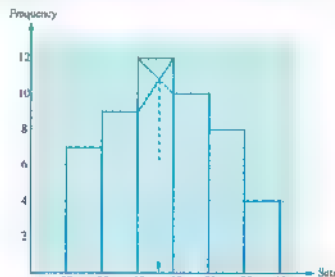

11

$$1 \quad \therefore k + 4 + 3k + 4k + 3k + 1 + 3k + 1 + k + 1 = 50$$

$$15k + 5 = 50 \quad 15k = 45 \quad \therefore k = 3$$

2

Weight in kg.	30 - 35	35 - 40	45 - 50	50 - 55	Total	
number of students	7	9	12	8	4	50

 From the graph : The mode weight ≈ 43 kg

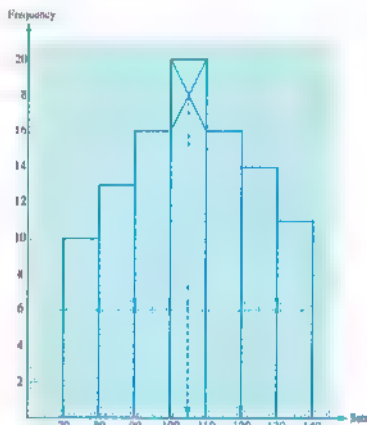

12

$$1 \quad x = 110$$

$$\therefore k - 4 = 100 - (10 + 13 + 20 + 16 + 14 + 11)$$

$$\therefore k - 4 = 16 \quad \therefore k = 20$$

2

 From the graph : The mode wage ≈ 105 pounds

13

1

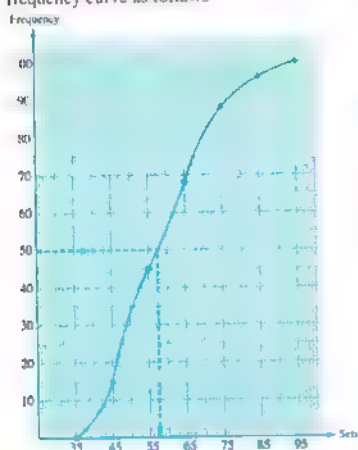

Sets	"X"	"f"	"X × f"
35 -	40	15	600
45 -	50	30	1500
55 -	60	23	1380
65 -	70	20	1400
75 -	80	8	640
85 -	90	4	360
Total		100	5880

∴ The mean of working hours = $\frac{5880}{100}$
= 58.8 hours

2 We form the ascending cumulative frequency table as follows :

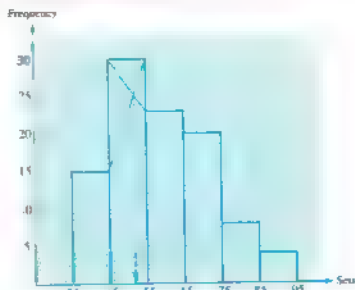

The upper limits of sets	Ascending cumulative frequency
less than 35	0
less than 45	15
less than 55	45
less than 65	68
less than 75	88
less than 85	96
less than 95	100

∴ then we draw the ascending cumulative frequency curve as follows

∴ The order of the median = $\frac{100}{2} = 50$
The median ≈ 57.5 hours

2 We graph the histogram of the distribution as follows

From the graph :

We find that the mode ≈ 52 hours

14

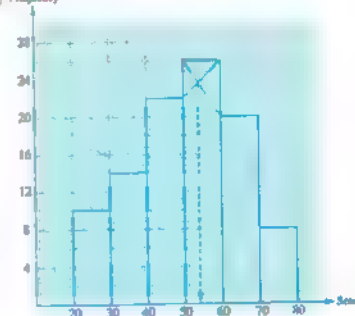

1 $k = 100 - (10 + 22 + 26 + 20 + 8) = 14$

2

Sets	"X"	"f"	"X × f"
20 -	25	10	250
30 -	35	14	490
40 -	45	22	990
50 -	55	26	1430
60 -	65	20	1300
70 -	75	8	600
Total		100	5060

The mean = $\frac{5060}{100} = 50.6$ pounds

3

From the graph : The mode value = 54 pounds.

15

1 $\therefore 3k + 4k = 50 - (7 + 10 + 8 + 4)$

$\therefore 7k = 21 \quad \therefore k = \frac{21}{7} = 3$

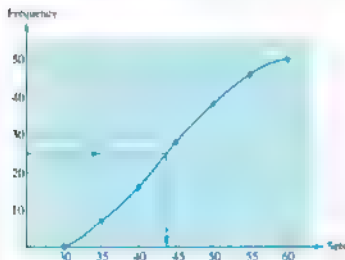

2

Sets	"x"	"f"	"x × f"
30 –	32.5	7	227.5
35 –	37.5	9	337.5
40 –	42.5	12	510
45 –	47.5	10	475
50 –	52.5	8	420
55 –	57.5	4	230
Total		50	2200

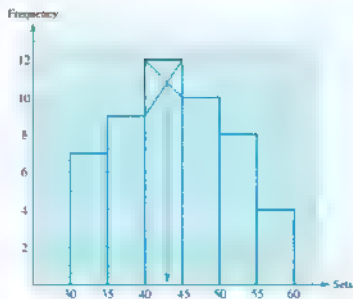

\therefore The mean = $\frac{2200}{50} = 44$ kg

3

The upper limits of sets	Ascending cumulative frequency
less than 30	0
less than 35	7
less than 40	16
less than 45	28
less than 50	38
less than 55	46
less than 60	50

4

From the graph : The mode weight = 43 kg

5 The order of the median = $\frac{50}{2} = 25$

\therefore The median = 43.5 kg.

Guide Answers of Geometry Exercises

Answers of unit four

Answers of Exercise 1

- 1 a median 2 3 3 one point 4 1 : 2
5 2 : 1 6 4 7 16

- 1 d 2 a 3 d 4 d
5 a 6 d 7 c

- 1 8 cm, 5 cm. 2 6 cm, 4 cm, $\frac{1}{3}$, $\frac{2}{3}$
3 6 cm, 3 cm, 4 cm. 4 5 cm, 12 cm, 27 cm

- 4 \overline{AD} , \overline{BE} are two medians in $\triangle ABC$,
 $\overline{AD} \cap \overline{BE} = \{M\}$
 $\therefore M$ is the point of concurrence of the medians of $\triangle ABC$

$$MD = \frac{1}{3} AD = \frac{1}{3} \times 6 = 2 \text{ cm} \quad (1)$$

$$ME = \frac{1}{3} BE = \frac{1}{3} \times 9 = 3 \text{ cm} \quad (2)$$

D is the midpoint of \overline{BC} , E is the midpoint of \overline{AC} in $\triangle ABC$

$$DE = \frac{1}{2} AB = \frac{1}{2} \times 9 = 4.5 \text{ cm}, \quad (3)$$

From (1), (2) and (3),

$$\text{The perimeter of } \triangle MDE = 2 + 3 + 4.5 = 9.5 \text{ cm.} \quad (\text{The req})$$

- 5 D is the midpoint of \overline{AB} ,
 E is the midpoint of \overline{AC}

$$\therefore BC = 2 DE \quad \therefore BC = 8 \text{ cm.}$$

M is the intersection point of medians of $\triangle ABC$

$$MC = 2 DM \quad \therefore MC = 6 \text{ cm}$$

$$BM = \frac{2}{3} BE \quad \therefore BM = 4 \text{ cm.}$$

$$\therefore \text{The perimeter of } \triangle BMC = 8 + 6 + 4 = 18 \text{ cm.} \quad (\text{The req})$$

- 6 M is the intersection point of the medians of $\triangle ABC$
 $XM = \frac{1}{2} MC = 4 \text{ cm}$

The perimeter of $\triangle MXY = 4 + 5 + 3 = 12 \text{ cm}$

(First req)

$$\therefore AM = 2 MY = 6 \text{ cm}$$

$\therefore X$ is the midpoint of \overline{AB} ,

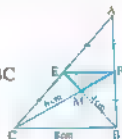

Y is the midpoint of \overline{BC}

$$AC = 2 XY = 10 \text{ cm.}$$

$$\text{The perimeter of } \triangle MAC = 6 + 8 + 10 = 24 \text{ cm}$$

(Second req)

- 7 F is the midpoint of \overline{AB} ,
 E is the midpoint of \overline{AC}
 \overline{BE} , \overline{CF} are two medians in $\triangle ABC$
 M is the intersection point of the medians of $\triangle ABC$

$$ME = \frac{1}{2} MB = 2 \text{ cm} \quad (1)$$

$$MF = \frac{1}{2} MC = 3 \text{ cm} \quad (2)$$

F is the midpoint of \overline{AB} , E is the midpoint of \overline{AC}

$$FE = \frac{1}{2} BC = 4 \text{ cm} \quad (3)$$

From (1), (2) and (3),

$$\therefore \text{The perimeter of } \triangle MFE = 2 + 3 + 4 = 9 \text{ cm.} \quad (\text{The req})$$

- 8 M is the intersection point of medians of $\triangle ABC$
 $MF = \frac{1}{2} AM \quad (1)$
 $MD = \frac{1}{2} MC \quad (2)$
 D is the midpoint of \overline{AB} ,
 F is the midpoint of \overline{BC} in $\triangle ABC$
 $DF = \frac{1}{2} AC \quad (3)$

By adding (1), (2) and (3):

$$MF + MD + DF = \frac{1}{2} AM + \frac{1}{2} MC + \frac{1}{2} AC$$

$$\begin{aligned} \therefore \text{The perimeter of } \triangle MFD &= \frac{1}{2} (AM + MC + AC) \\ &= \frac{1}{2} \text{ the perimeter of } \triangle AMC \\ &= \frac{1}{2} \times 36 = 18 \text{ cm.} \quad (\text{The req.}) \end{aligned}$$

- 9 M is the point of concurrence of the medians of $\triangle ABC$
 \overline{CD} is a median in $\triangle ABC$

Geometry

$$DM = \frac{1}{2} MC = 3 \text{ cm}$$

$\therefore \triangle AMD$ is a right-angled triangle at M

$$(AM)^2 = (AD)^2 - (DM)^2 = 25 - 9 = 16$$

$$\therefore AM = 4 \text{ cm}$$

$$ME = \frac{1}{2} AM = 2 \text{ cm} \quad (\text{The req.})$$

ABCD is a parallelogram

The two diagonals bisect each other

M is the midpoint of \overline{AC}

\overline{DM} is a median in $\triangle ADC$

$$DE = 2 EM$$

$\therefore E$ is the intersection point of the medians of $\triangle ADC$

$E \in \overline{FC}$

$\therefore \overline{CF}$ is a median in $\triangle ACD \quad \therefore AF = FD$ (Q.E.D.)

11

The two diagonals of the rectangle bisect each other

M is the midpoint of \overline{AC}

$\therefore \overline{BM}$ is a median in $\triangle ABC$

E is the midpoint of \overline{AB}

$\therefore \overline{CE}$ is a median in $\triangle ABC$

$$\overline{CE} \cap \overline{BM} = \{F\}$$

F is the intersection point of the medians of $\triangle ABC$

(First req.)

$$\therefore BF = \frac{2}{3} BM \quad \therefore 4 = \frac{2}{3} BM \quad \therefore BM = 6 \text{ cm.}$$

The two diagonals of the rectangle are equal in length and bisect each other

$$AM = BM = 6 \text{ cm.} \quad (\text{Second req.})$$

12

D is the midpoint of \overline{BC}

$\therefore \overline{AD}$ is a median in $\triangle ABC$

$$\therefore AM = \frac{2}{3} AD$$

$\therefore M$ is the intersection point of the medians of $\triangle ABC$

$\therefore \overline{CF}$ is a median in $\triangle ABC$

$$\therefore F \text{ is the midpoint of } \overline{AB} \quad \therefore BF = \frac{1}{2} AB$$

$$\therefore AC = AB \quad \therefore BF = \frac{1}{2} AC \text{ (Q.E.D.)}$$

13

D is the midpoint of \overline{BC}

$\therefore \overline{AD}$ is a median in $\triangle ABC$

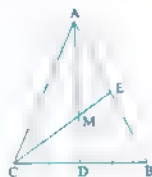

$$AM = 2 MD$$

M is the intersection point of the medians of $\triangle ABC$

$M \in \overline{CE}$

$\therefore \overline{CE}$ is a median in $\triangle ABC$

$$\therefore EM = \frac{1}{3} EC = \frac{1}{3} \times 12 = 4 \text{ cm.} \quad (\text{The req.})$$

14

$\therefore M$ is the point of concurrence of the medians of $\triangle ABC$

\overline{CD} is a median in $\triangle ABC$

D is the midpoint of \overline{AB}

In $\triangle MB$

D is the midpoint of \overline{AB} , E is the midpoint of \overline{BM}

$\therefore \overline{MD}$, \overline{AE} are two medians in $\triangle AMB$

N is the point of concurrence of the medians of $\triangle AMB$

$$\therefore MN = 2 ND \quad \therefore X + 3 = 2(X - 1)$$

$$\therefore X + 3 = 2X - 2 \quad \therefore 3 + 2 = 2X - X$$

$$\therefore X = 5$$

$$\therefore ND = 5 - 1 = 4 \text{ cm} \quad \therefore MN = 5 + 3 = 8 \text{ cm}$$

$$\therefore MD = ND + MN = 12 \text{ cm}$$

$\therefore \overline{CD}$ is a median in $\triangle ABC$

$$\therefore MC = 2 MD = 24 \text{ cm} \quad (\text{The req.})$$

15

ABCD is a parallelogram

The two diagonals bisect each other

$\therefore M$ is the midpoint of \overline{BD}

$\therefore \overline{CM}$ is a median in $\triangle DBC$

$\therefore E$ is the midpoint of \overline{BC}

$\therefore \overline{DE}$ is a median in $\triangle DBC$

$\therefore F$ is the intersection point of the medians of $\triangle DBC$

$\therefore \overline{BF}$ bisects \overline{CD} (Q.E.D. 1)

$$\therefore CF = \frac{2}{3} CM, \quad \therefore CM = \frac{1}{2} AC$$

$$CF = \frac{2}{3} \times \frac{1}{2} AC = \frac{1}{3} AC \quad (\text{Q.E.D. 2})$$

16

\overline{AD} and \overline{BE} are medians in $\triangle ABC$

• M is the intersection point of the medians of $\triangle ABC$
 $\therefore M \in CF$ $\therefore CF$ is a median in $\triangle ABC$

$\therefore F$ is the midpoint of \overline{AB}

In $\triangle ABM$,

F is the midpoint of \overline{AB} , N is the midpoint of \overline{BM}

$\therefore NF \parallel AM$ $\therefore NF \parallel MD$ (1)

In $\triangle BMC$

D is the midpoint of \overline{BC} , N is the midpoint of \overline{BM}

$\therefore ND \parallel CM$ $\therefore ND \parallel MF$ (2)

From (1) and (2)

The figure FNDM is a parallelogram. (Q.E.D.)

17

• D is the midpoint of \overline{BC}

\overline{AD} is a median in $\triangle ABC$

$\therefore AM = 2 MD$, $M \in \overline{AD}$

• M is the intersection point of the medians of $\triangle ABC$

$\therefore M \in \overline{BE}$

\overline{BE} is a median in $\triangle ABC$ $\therefore BM = 2 ME$

$\therefore BM = 4$ cm $\therefore BE = 2 + 4 = 6$ cm

$\therefore \triangle BCE$ in which

D is the midpoint of \overline{BC} , $\overline{DF} \parallel \overline{BE}$

$\therefore F$ is the midpoint of \overline{EC}

$DF = \frac{1}{2} BE = 3$ cm (The req.)

18

• D is the midpoint of \overline{BC} , $\overline{DF} \parallel \overline{AC}$

F is the midpoint of \overline{AB} $\therefore DF = \frac{1}{2} AC$

In $\triangle ABD$

• E is the midpoint of \overline{BD} , F is the midpoint of \overline{AB}

$\therefore \overline{AE}$ and \overline{DF} are medians in $\triangle ABD$

• M is the intersection point of the medians of $\triangle ABD$

$DM = \frac{2}{3} DF$ $\therefore DF = \frac{1}{2} AC$

$DM = \frac{2}{3} \times \frac{1}{2} AC = \frac{1}{3} AC$ (Q.E.D.)

19

\overline{CD} and \overline{BE} are two medians in $\triangle ABC$

M is the intersection point

of the medians of $\triangle ABC$

\overline{AF} is a median in $\triangle ABC$

F is the midpoint of \overline{BC}

• E is the midpoint of \overline{AC}

$\overline{FE} \parallel \overline{AB}$, $FE = \frac{1}{2} AB$

$\overline{FE} \parallel \overline{BD}$, $FE = BD$

$\therefore DBFE$ is a parallelogram (Q.E.D.)

4

In $\triangle ADC$

$m(\angle D) = 90^\circ$, E is the midpoint of \overline{AC}

$\therefore DE = \frac{1}{2} AC$ (1)

In $\triangle ABC$

$\therefore m(\angle B) = 90^\circ$, $m(\angle ACB) = 30^\circ$

$\therefore AB = \frac{1}{2} AC$ (2)

From (1) and (2)

$AB = DE$ (Q.E.D.)

5

In $\triangle LXZ$

D is the midpoint of \overline{LX} , E is the midpoint of \overline{LZ}

$\therefore DE = \frac{1}{2} XZ$ (1)

From $\triangle XYZ$

$m(\angle Y) = 90^\circ$, M is the midpoint of \overline{XZ}

$\therefore YM = \frac{1}{2} XZ$ (2)

From (1) and (2)

$\therefore DE = YM$ (Q.E.D.)

1

In $\triangle ACD$

E is the midpoint of \overline{AD} , F is the midpoint of \overline{CD}

Geometry

$$EF = \frac{1}{2} AC \quad \therefore AC = 8 \text{ cm.}$$

In $\triangle ABC$:

$$\therefore m(\angle B) = 90^\circ, m(\angle ACB) = 30^\circ$$

$$AB = \frac{1}{2} AC = 4 \text{ cm.} \quad (\text{The req.})$$

7

In $\triangle ABC$:

$$m(\angle BAC) = 90^\circ, D \text{ is the midpoint of } \overline{BC}$$

$$\therefore BC = 2 AD = 2 \times 3 = 6 \text{ cm.}$$

In $\triangle CBE$:

$$m(\angle CBE) = 90^\circ, m(\angle E) = 30^\circ$$

$$EC = 2 BC = 2 \times 6 = 12 \text{ cm.}$$

$\therefore F$ is the midpoint of \overline{CE}

$$\therefore BF = \frac{1}{2} EC = \frac{1}{2} \times 12 = 6 \text{ cm.} \quad (\text{The req.})$$

8

In $\triangle ABC$:

$$m(\angle B) = 90^\circ, m(\angle ACB) = 60^\circ$$

$$m(\angle CAB) = 30^\circ \quad \therefore BC = \frac{1}{2} AC$$

$$\overline{DE} \cong \overline{BC} \quad \therefore \overline{DE} = \frac{1}{2} \overline{AC}$$

\overline{DE} is a median in $\triangle ACD$

$$\therefore m(\angle ADC) = 90^\circ \quad (\text{Q.E.D.})$$

9

In $\triangle ABC$:

$$\therefore m(\angle B) = 90^\circ, m(\angle ACB) = 30^\circ$$

$$\therefore AB = \frac{1}{2} AC$$

$$\therefore AB = DE = 5 \text{ cm.} \quad \therefore DE = \frac{1}{2} AC$$

\overline{DE} is a median in $\triangle ACD$

$$\therefore m(\angle ADC) = 90^\circ \quad (\text{Q.E.D.})$$

10

In $\triangle DBC$

E is the midpoint of \overline{BC} , $\overline{EF} \perp \overline{BD}$

$$\therefore EF = \frac{1}{2} BD$$

$$\therefore AM = EF \quad \therefore AM = \frac{1}{2} BD$$

\overline{AM} is a median in $\triangle ABD$

$$m(\angle BAD) = 90^\circ \quad (\text{Q.E.D.})$$

11

$\angle ADC$ is an exterior angle of $\triangle ABD$

$$m(\angle ADC) = 33^\circ + 27^\circ = 60^\circ$$

\therefore In $\triangle ADC$:

$$m(\angle DAC) = 180^\circ - (60^\circ + 90^\circ) = 30^\circ$$

$$\therefore DC = \frac{1}{2} AD$$

$$\therefore AD = 8 \text{ cm.} \quad (\text{The req.})$$

12

In $\triangle ADB$

$$m(\angle ADB) = 90^\circ, AE = EB$$

$$\therefore DE = \frac{1}{2} AB$$

Similarly in $\triangle ACB$:

$$\therefore m(\angle ACB) = 90^\circ, AE = EB$$

$$\therefore CE = \frac{1}{2} AB \quad \therefore DE = CE$$

$$\therefore \triangle CED \text{ is an isosceles triangle} \quad (\text{Q.E.D.})$$

13

In $\triangle LYE$:

$$\therefore m(\angle YLE) = 90^\circ, m(\angle E) = 30^\circ$$

$$\therefore LY = \frac{1}{2} YE = 5 \text{ cm.}$$

In $\triangle ZYX$:

$$m(\angle ZYX) = 90^\circ, L \text{ is the midpoint of } \overline{ZX}$$

$$YL = \frac{1}{2} ZX \quad ZX = 10 \text{ cm} \quad (\text{The req.})$$

14

In $\triangle ABC$:

$$m(\angle ABC) = 90^\circ, m(\angle C) = 30^\circ$$

$$\therefore AC = 2 AB = 14 \text{ cm}$$

$\therefore D$ is the midpoint of \overline{AC}

$$\therefore BD = \frac{1}{2} AC = 7 \text{ cm}$$

In $\triangle DEC$:

$$\therefore m(\angle DEC) = 90^\circ, m(\angle C) = 30^\circ$$

$$DE = \frac{1}{2} DC \quad \therefore DC = \frac{1}{2} AC = 7 \text{ cm}$$

$$DE = 3.5 \text{ cm} \quad (\text{The req.})$$

15

In $\triangle ABC$:

$$m(\angle ABC) = 90^\circ, m(\angle C) = 30^\circ$$

$$AB = \frac{1}{2} AC = 4 \text{ cm.}$$

X is the midpoint of \overline{AB} , Y is the midpoint of \overline{BC}

$$XY = \frac{1}{2} AC = 4 \text{ cm}$$

In $\triangle XBY$,

$$m(\angle XBY) = 90^\circ$$

$\therefore Z$ is the midpoint of \overline{XY}

$$\therefore BZ = \frac{1}{2} XY = 2 \text{ cm.} \quad (\text{The req.})$$

16

In $\triangle MED$

$$m(\angle MED) = 90^\circ \quad (MD)^2 = 3^2 + 4^2 = 25$$

$$MD = \sqrt{25} = 5 \text{ cm}$$

$\therefore M$ is the point of concurrence of the medians of $\triangle ABC$

$$\therefore AD = 3 MD = 15 \text{ cm}$$

$$\therefore m(\angle BAC) = 90^\circ$$

$\therefore AD$ is a median in $\triangle ABC$

$$\therefore BC = 2 AD = 30 \text{ cm} \quad (\text{The req.})$$

17

In $\triangle ABC$

$$m(\angle BAC) = 90^\circ$$

$$(BC)^2 = (12)^2 + (9)^2 = 225$$

$$BC = \sqrt{225} = 15 \text{ cm}$$

$\therefore AD$ is a median in $\triangle ABC$, $m(\angle BAC) = 90^\circ$

$$AD = \frac{1}{2} BC = 7\frac{1}{2} \text{ cm}$$

$\therefore M$ is the point of concurrence of the medians of $\triangle ABC$

$$AM = \frac{2}{3} AD = 5 \text{ cm.} \quad (\text{The req.})$$

18

$ABCD$ is a parallelogram

$$m(\angle C) = m(\angle A) = 60^\circ$$

In $\triangle DEC$

$$m(\angle EDC) = 180^\circ - (60^\circ + 90^\circ) = 30^\circ$$

$$CE = \frac{1}{2} DC \quad \therefore DC = 8 \text{ cm.}$$

The perimeter of the parallelogram $ABCD$

$$= (12 + 8) \times 2 = 40 \text{ cm.} \quad (\text{The req.})$$

19

$$\therefore m(\angle BAD) = 90^\circ, m(\angle BAE) = 30^\circ$$

$$\therefore m(\angle DAF) = 60^\circ$$

From $\triangle AFD$

$$m(\angle AFD) = 90^\circ, m(\angle DAF) = 60^\circ$$

$$m(\angle ADF) = 30^\circ \quad \therefore AD = 2 AF = 8 \text{ cm}$$

$$\text{The area of the square} = 64 \text{ cm}^2 \quad (\text{The req.})$$

20

In $\triangle BCE$

$$m(\angle EBC) = 30^\circ$$

$$\therefore CE = \frac{1}{2} BE \quad (1)$$

$$\therefore m(\angle EBC) = 30^\circ \quad m(\angle ABE) = 60^\circ$$

In $\triangle ABE$

$$m(\angle EAB) = 30^\circ$$

$$\therefore m(\angle AEB) = 90^\circ$$

$$\therefore BE = \frac{1}{2} AB \quad (2)$$

From (1) and (2)

$$\therefore CE = \frac{1}{2} \times \frac{1}{2} AB = \frac{1}{4} AB \quad (\text{Q.E.D.})$$

21

In $\triangle ABC$

$$m(\angle ABC) = 90^\circ, m(\angle A) = 30^\circ$$

$$\therefore AC = 2 BC = 16 \text{ cm}$$

$$m(\angle C) = 180^\circ - (90^\circ + 30^\circ) = 60^\circ$$

In $\triangle BCD$

$$m(\angle BDC) = 90^\circ, m(\angle C) = 60^\circ$$

$$\therefore m(\angle CBD) = 180^\circ - (90^\circ + 60^\circ) = 30^\circ$$

$$\therefore CD = \frac{1}{2} BC = 4 \text{ cm}$$

$$AD = AC - CD = 16 - 4 = 12 \text{ cm} \quad (\text{The req.})$$

22

In $\triangle ABC$

$$m(\angle B) = 30^\circ, m(\angle C) = 90^\circ$$

$$AC = \frac{1}{2} AB$$

$\therefore E$ is the midpoint of BC

$\therefore O$ is the midpoint of \overline{AC}

$$EO = \frac{1}{2} AB \quad \therefore EO = AC$$

In $\triangle DEO$

X is the midpoint of DE

$\therefore Y$ is the midpoint of \overline{DO}

$$XY = \frac{1}{2} EO \quad \therefore XY = \frac{1}{2} AC \quad (\text{Q.E.D.})$$

23

In $\triangle ADB$

$$m(\angle ADB) = 90^\circ$$

$\therefore E$ is the midpoint of \overline{AB}

$$\therefore DE = \frac{1}{2} AB$$

In $\triangle ADC$

$$m(\angle ADC) = 90^\circ$$

$$\therefore F \text{ is the midpoint of } \overline{AC} \quad \therefore DF = \frac{1}{2} AC$$

$$DE + DF = \frac{1}{2} AB + \frac{1}{2} AC \text{ but } AB = AC \text{ (Given)}$$

$$DE + DF = \frac{1}{2} AB + \frac{1}{2} AB = AB \quad (\text{Q.E.D.})$$

24

In $\triangle ABC$

$\overline{EO} \parallel \overline{AC}$, E is the midpoint of \overline{AB}

$\therefore O$ is the midpoint of \overline{BC}

$$\therefore BC = 4 + 12 = 16 \text{ cm}$$

$$BO = \frac{1}{2} BC = 8 \text{ cm}$$

$$\therefore DO = 8 - 4 = 4 \text{ cm}$$

$$BD = DO$$

$\therefore \overline{EO} \parallel \overline{AC}$, \overline{AB} is a transversal

$$m(\angle BEO) = m(\angle A) = 90^\circ \text{ (corresponding angles)}$$

$$ED = \frac{1}{2} BO = 4 \text{ cm.} \quad (\text{The req.})$$

25

Let the service station lie at the

point D which is the midpoint of \overline{AB}

The road length = the length of \overline{CD}

In $\triangle ACB$:

$$m(\angle ACB) = 90^\circ$$

$$(AB)^2 = (AC)^2 + (BC)^2 = 1600 + 900 = 2500$$

$$\therefore AB = 50 \text{ km}$$

$\therefore D$ is the midpoint of \overline{AB}

$$\therefore CD = \frac{1}{2} AB = \frac{1}{2} \times 50 = 25 \text{ km}$$

$$\text{The length of the road } 25 \text{ km} \quad (\text{The req.})$$

26

Constr : Draw \overline{BM} to intersect \overline{AC} at D

Proof : $\therefore M$ is the point of concurrence of the medians of $\triangle ABC$

$$\therefore MD = \frac{1}{2} BM = 5 \text{ cm.}$$

In $\triangle AMC$, $\therefore m(\angle AMC) = 90^\circ$

$\therefore MD$ is a median

$$MD = \frac{1}{2} AC \quad \therefore AC = 10 \text{ cm.} \quad (\text{First req.})$$

In $\triangle BMC$, $\therefore m(\angle BMC) = 90^\circ$

$$\therefore (MC)^2 = (10)^2 - (6)^2 = 64$$

$$\therefore MC = \sqrt{64} = 8 \text{ cm.} \quad (\text{Second req.})$$

27

$$\therefore \overline{DA} \parallel \overline{CB}$$

$\therefore \overline{DC}$ is a transversal.

$$\therefore m(\angle ADC) + m(\angle DCB) = 180^\circ$$

$$\therefore \frac{1}{2} m(\angle ADC) + \frac{1}{2} m(\angle DCB) = 90^\circ$$

$$m(\angle XDC) + m(\angle DCX) = 90^\circ$$

but the sum of the measures of the interior angles of a triangle $XDC = 180^\circ$

$$m(\angle DXC) = 90^\circ, \quad DY = YC$$

$$XY = \frac{1}{2} DC, \quad XY = YC \quad (\text{Q.E.D.})$$

4

In $\triangle ABC$

$$AB = AC$$

$$\therefore m(\angle ABC) = m(\angle ACB)$$

$$= \frac{180^\circ - 40^\circ}{2} = 70^\circ \quad (\text{First req.})$$

$$m(\angle ABC) = m(\angle ACB)$$

$\angle ABD$ supplements $\angle ABC$

$\angle ACE$ supplements $\angle ACB$

\therefore The supplementaries of the congruent angles are congruent

$$\therefore \angle ABD = \angle ACE \quad (\text{Second req.})$$

5

From $\triangle ABC$

$$\therefore AB = AC$$

$$\therefore m(\angle B) = m(\angle ACB) = 70^\circ$$

$$m(\angle BAC) = 180^\circ - (2 \times 70^\circ) = 40^\circ$$

In $\triangle ACD$

$$AC = CD \quad \therefore m(\angle CAD) = m(\angle D)$$

 $\angle ACB$ is an exterior angle of $\triangle ACD$

$$m(\angle ACB) = m(\angle CAD) + m(\angle D)$$

$$\therefore m(\angle CAD) = \frac{70^\circ}{2} = 35^\circ$$

$$m(\angle BAD) = m(\angle BAC) + m(\angle CAD) \\ = 40^\circ + 35^\circ = 75^\circ \quad (\text{The req.})$$

6

 $\therefore \angle ACD$ is an exterior angle of $\triangle ABC$

$$\therefore m(\angle ACD) = 30^\circ + 40^\circ = 70^\circ$$

From $\triangle ACD$

$$\therefore AC = AD$$

$$\therefore m(\angle D) = m(\angle ACD) = 70^\circ \quad (\text{First req.})$$

$$\therefore m(\angle CAD) = 180^\circ - (70^\circ + 70^\circ) = 40^\circ \quad (\text{Second req.})$$

7

 $\therefore \triangle ACD$ is an equilateral triangle

$$\therefore m(\angle CAD) = 60^\circ \quad (1)$$

From $\triangle ABC$,

$$\therefore AB = BC$$

$$m(\angle BAC) = m(\angle BCA) = \frac{180^\circ - 40^\circ}{2} = 70^\circ \quad (2)$$

From (1) and (2),

$$m(\angle BAD) = 60^\circ + 70^\circ = 130^\circ \quad (\text{The req.})$$

8

In $\triangle ABD$

$$AB = AD$$

$$m(\angle ADB) = m(\angle ABD) = \frac{180^\circ - 120^\circ}{2} = 30^\circ \quad (\text{First req.})$$

 $\overline{AD} \parallel \overline{BC}$, \overline{DC} is a transversal to them

$$\therefore m(\angle C) + m(\angle ADC) = 180^\circ$$

$$\therefore m(\angle C) = 180^\circ - (65^\circ + 30^\circ) = 85^\circ \quad (\text{Second req.})$$

9

 \overline{AD} , \overline{BC} , \overline{AC} is a transversal to them

$$m(\angle C) = m(\angle DAC) = 30^\circ \quad (\text{alternate angles})$$

In $\triangle ABC$,

$$\therefore AC = BC$$

$$\therefore m(\angle CAB) = m(\angle B) = \frac{180^\circ - 30^\circ}{2} = 75^\circ \quad (\text{The req.})$$

10

 $\therefore \triangle DEC$ is an equilateral triangle

$$\therefore m(\angle ECD) = 60^\circ \quad (1)$$

From $\triangle ABC$,

$$AB = AC \quad \therefore m(\angle B) = m(\angle ACB)$$

$$\therefore m(\angle B) + m(\angle ACB) = 180^\circ - 80^\circ = 100^\circ$$

$$\therefore m(\angle B) = m(\angle ACB) = \frac{100^\circ}{2} = 50^\circ \quad (2)$$

From (1) and (2)

$$\therefore m(\angle BCD) = 50^\circ + 60^\circ = 110^\circ \quad (\text{The req.})$$

11

In $\triangle ABC$

$$BA = BC, m(\angle B) = 80^\circ$$

$$m(\angle BAC) = m(\angle BCA) = \frac{180^\circ - 80^\circ}{2} = 50^\circ$$

$$\therefore m(\angle DAC) = 114^\circ - 50^\circ = 64^\circ$$

In $\triangle ADC$

$$\therefore DA = DC, m(\angle DAC) = 64^\circ$$

$$\therefore m(\angle ADC) = 180^\circ - (64^\circ \times 2) = 52^\circ \quad (\text{The req.})$$

12

From $\triangle ABC$

$$AB = AC$$

$$\therefore m(\angle B) = m(\angle BCA)$$

$$\therefore m(\angle B) + m(\angle BCA) = 180^\circ - 48^\circ = 132^\circ$$

$$\therefore m(\angle B) = m(\angle BCA) = \frac{132^\circ}{2} = 66^\circ \quad (\text{First req.})$$

 \overline{CD} bisects $\angle ACB$

$$m(\angle BCD) = \frac{66^\circ}{2} = 33^\circ \quad (\text{Second req.})$$

13

 $\triangle ABC$ is an equilateral triangle

$$\therefore m(\angle ABC) = m(\angle ACB) = 60^\circ$$

$$\frac{1}{2} m(\angle ABC) = \frac{1}{2} m(\angle ACB) = 30^\circ$$

 \overline{BD} bisects $\angle ABC$, \overline{CD} bisects $\angle ACB$

$$m(\angle DCB) = m(\angle DCB) = 30^\circ$$

 \therefore From $\triangle DBC$

$$m(\angle D) = 180^\circ - (2 \times 30^\circ) = 120^\circ \quad (\text{The req.})$$

14

 $\triangle ABC$ is an equilateral triangle

$$m(\angle ABC) = 60^\circ \quad (1)$$

From $\triangle DBC$:

Geometry

$$DB = DC \Rightarrow m(\angle D) = 100^\circ$$

$$m(\angle DBC) = m(\angle DCB) = \frac{180^\circ - 100^\circ}{2} = 40^\circ \quad (2)$$

From (1) and (2)

$$\begin{aligned} m(\angle ABD) &= m(\angle ABC) - m(\angle DBC) \\ &= 60^\circ - 40^\circ = 20^\circ \quad (\text{The req.}) \end{aligned}$$

$\triangle ABC$ is an equilateral triangle

$$m(\angle ACB) = m(\angle B) = m(\angle BAC) = 60^\circ$$

$$m(\angle ACD) = 120^\circ$$

In $\triangle ACD$

$$\because AC = CD \quad \therefore m(\angle CAD) = m(\angle D)$$

$$m(\angle CAD) + m(\angle D) = 180^\circ - 120^\circ = 60^\circ$$

$$m(\angle CAD) = \frac{60^\circ}{2} = 30^\circ$$

$$m(\angle BAD) = 60^\circ + 30^\circ = 90^\circ$$

$$\therefore \overline{BA} \perp \overline{AD} \quad (\text{Q.E.D.})$$

10

From $\triangle ABC$:

$$\because AB = AC \quad \therefore m(\angle B) = m(\angle C)$$

$\triangle ABD \cong \triangle ACE$ in them

$$\begin{cases} AB = AC \\ m(\angle B) = m(\angle C) \\ BD = EC \end{cases}$$

$\triangle ABD \cong \triangle ACE$ then we deduce that $AD = AE$

$\triangle ADE$ is an isosceles triangle (Q.E.D. 1)

$$m(\angle ADE) = m(\angle AED)$$

$$\therefore \angle ADE = \angle AED \quad (\text{Q.E.D. 2})$$

$\triangle ADE \cong \triangle BCE$ in them

$$\begin{cases} AD = CB \\ AE = EB \\ m(\angle A) = m(\angle B) \end{cases}$$

$\triangle ADE \cong \triangle BCE$, then we deduce that $DE = CE$

In $\triangle DEC$

$$DE = CE \quad m(\angle EDC) = m(\angle ECD)$$

$$m(\angle DEC) = 40^\circ$$

$$m(\angle EDC) + m(\angle ECD) = 180^\circ - 40^\circ = 140^\circ$$

$$m(\angle EDC) = \frac{140^\circ}{2} = 70^\circ \quad (\text{The req.})$$

18

$\therefore \angle LZX$ is an exterior angle of $\triangle XYZ$

$$m(\angle X) + m(\angle Y) = 130^\circ$$

$$\because ZX = ZY \quad \therefore m(\angle X) = m(\angle Y)$$

$$m(\angle Y) = \frac{130^\circ}{2} = 65^\circ$$

$\because \overline{LM} \parallel \overline{XY}, \overline{LY}$ is a transversal to them

$$m(\angle MLY) = m(\angle Y) = 65^\circ \quad (\text{The req.})$$

19

$\overline{AE} \parallel \overline{BC}$ and \overline{BD} is a transversal to them

$$\therefore m(\angle B) = m(\angle DAE) \text{ (corresponding angles)}$$

$\because \overline{AE} \parallel \overline{BC}, \overline{AC}$ is a transversal to them.

$$\therefore m(\angle C) = m(\angle EAC) \text{ (alternate angles)}$$

but $m(\angle B) = m(\angle C)$ because $AB = AC$

$$m(\angle DAE) = m(\angle EAC)$$

$$\therefore \overline{AE} \text{ bisects } \angle DAC \quad (\text{Q.E.D.})$$

20

$$\therefore B \in \overline{AD}$$

$$\therefore m(\angle ABC) + m(\angle CBE) + m(\angle EBD) = 180^\circ \quad (1)$$

The sum of measures of the angles of the triangle = 180°

$$\therefore m(\angle ABC) + m(\angle A) + m(\angle C) = 180^\circ \quad (2)$$

From (1) and (2):

$$\therefore m(\angle CBE) + m(\angle EBD) = m(\angle A) + m(\angle C)$$

$$\therefore m(\angle CBE) = m(\angle EBD) \text{ (Given)}$$

$$\therefore m(\angle A) = m(\angle C) \text{ (because } BA = BC)$$

$m(\angle CBE) = m(\angle C)$ and they are alternate angles.

$$\therefore \overline{BE} \parallel \overline{AC} \quad (\text{Q.E.D.})$$

21

In $\triangle DEC$:

$$DE = DC$$

$$\therefore m(\angle DEC) = m(\angle C) = \frac{180^\circ - 40^\circ}{2} = 70^\circ$$

$\because \overline{AD} \parallel \overline{EC}, \overline{DE}$ is a transversal to them

$$\therefore m(\angle ADE) = m(\angle DEC) = 70^\circ \text{ (alternate angles)}$$

$$\therefore AD = AE$$

$$\therefore m(\angle AED) = m(\angle ADE) = 70^\circ \quad (\text{First req.})$$

In $\triangle AED$

$$\therefore m(\angle EAD) = 180^\circ - (70^\circ + 70^\circ) = 40^\circ$$

$$\therefore m(\angle BAD) = m(\angle C) = 70^\circ$$

(from properties of the parallelogram)

$$\therefore m(\angle BAE) = 70^\circ - 40^\circ = 30^\circ \quad (\text{Second req.})$$

22

 In $\triangle DBC$: $DB = DC$

$$\therefore m(\angle DCB) = m(\angle DBC) = \frac{180^\circ - 140^\circ}{2} = 20^\circ$$

 $\therefore \overline{DE} \parallel \overline{BC}$, \overline{DC} is a transversal

$$m(\angle EDC) = m(\angle DCB) = 20^\circ \text{ (alternate angles)}$$

 In $\triangle DCE$: $\therefore DE = EC$

$$\therefore m(\angle DCE) = m(\angle EDC) = 20^\circ$$

$$\therefore m(\angle ACB) = 20^\circ + 20^\circ = 40^\circ$$

 From $\triangle ABC$:

$$m(\angle A) = 180^\circ - (20^\circ + 40^\circ) = 120^\circ \quad (\text{The req.})$$

23

 From $\triangle ABC$

$$AB = AC \quad \therefore m(\angle B) = m(\angle C)$$

$$2x + 13 = 3x - 17 \quad x = 30^\circ$$

$$m(\angle B) = m(\angle C) = 2 \times 30 + 13 = 73^\circ$$

$$\therefore m(\angle A) = 180^\circ - (73^\circ + 73^\circ) = 34^\circ \quad (\text{The req.})$$

24

$$1. x = 60^\circ, y = 121^\circ \quad 2. x = 45^\circ, y = 105^\circ$$

$$3. x = 44^\circ$$

$$4. x = 75^\circ, y = 15^\circ \quad 5. x = 25^\circ, y = 92^\circ$$

$$6. y = 110^\circ, z = 40^\circ, z = 70^\circ$$

$$7. x = 30^\circ, y = 40^\circ \quad 8. x = 70^\circ, y = 50^\circ$$

$$9. x = 120^\circ \quad 10. x = 40^\circ$$

$$11. x = 100^\circ \quad 12. x = 15^\circ$$

25

$$1. 3 \text{ cm.}$$

$$2. 5^\circ$$

$$3. 5^\circ$$

$$4. 66.5^\circ$$

$$5. 7^\circ$$

$$6. 22^\circ$$

26

 In $\triangle DBE$

$$DB = DE$$

$$m(\angle 1) = m(\angle 2)$$

 In $\triangle OEC$:

$$OE = OC \quad \therefore m(\angle 3) = m(\angle 4)$$

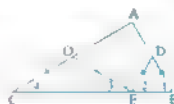

$$\therefore E \in \overline{BC}, m(\angle DEO) = 90^\circ$$

$$m(\angle 2) + m(\angle 3) = 90^\circ$$

$$\therefore m(\angle 1) + m(\angle 4) = 90^\circ$$

 In $\triangle ABC$:

$$\therefore m(\angle A) = 180^\circ - 90^\circ = 90^\circ \quad (\text{The req.})$$

27

 In $\triangle EBD$ and $\triangle CBD$
 $\left\{ \begin{array}{l} BD \text{ is a common side} \\ m(\angle EBD) = m(\angle CBD) \\ m(\angle EDB) = m(\angle CDB) \end{array} \right.$

$$\therefore \triangle EBD \cong \triangle CBD, \text{ then we deduce that}$$

$$BE = BC, m(\angle BED) = m(\angle CBD)$$

$$\therefore BA = BC \quad \therefore BA = BE$$

$$m(\angle A) = m(\angle BEA)$$

$$\therefore m(\angle BEA) + m(\angle BED) = 180^\circ$$

$$m(\angle A) + m(\angle C) = 180^\circ \quad (\text{Q.E.D.})$$

$$\therefore m(\angle A) + m(\angle C) = 180^\circ$$

$$m(\angle A) + m(\angle C) = 180^\circ \quad (\text{Q.E.D.})$$

 $\triangle XYM \cong \triangle MZL$ then

$$\left\{ \begin{array}{l} XY = MZ \\ YM = LZ \\ m(\angle Y) = m(\angle Z) = 90^\circ \end{array} \right.$$

 $\therefore \triangle XYM \cong \triangle MZL$, then we deduce that

$$XM = ML, m(\angle XMY) = m(\angle MLZ)$$

$$\therefore \angle MLZ \text{ complements } \angle LMZ$$

$$\therefore \angle XMY \text{ complements } \angle LMZ$$

$$\therefore m(\angle XML) = 90^\circ$$

 \therefore From $\triangle XLM$

$$MX = ML, m(\angle XML) = 90^\circ$$

$$m(\angle MXL) = m(\angle MLX) = \frac{180^\circ - 90^\circ}{2} = 45^\circ$$

(The req.)

29

 From $\triangle BDC$

$$BD = CD$$

$$m(\angle DBC) = m(\angle BCD) \quad (1)$$

 $\angle ADB$ is an exterior angle of $\triangle CBD$

$$m(\angle ADB) = m(\angle DBC) + m(\angle BCD)$$

$$\text{from (1), } m(\angle ADB) = 2m(\angle BCD) \quad (2)$$

 In $\triangle ABD$

$$AB = AD$$

$$m(\angle ABD) = m(\angle ADB)$$

from (2),

$$m(\angle ABD) = m(\angle ADB) = 2m(\angle BCD)$$

 $\therefore \angle BAE$ is an exterior angle of $\triangle ABD$

$$\begin{aligned} m(\angle BAE) &= m(\angle ABD) + m(\angle ADB) \\ &= 2m(\angle BCD) + 2m(\angle BCD) \\ &= 4m(\angle BCD) \quad (\text{Q.E.D.}) \end{aligned}$$

30

In $\triangle ABC$

$$BC = BA$$

$$m(\angle A) = m(\angle 1) = x$$

$\therefore \angle 2$ is an exterior angle of $\triangle ABC$

$$\therefore m(\angle 2) = m(\angle A) + m(\angle 1) = x + x = 2x$$

In $\triangle DBC$ $CB = CD$

$$\therefore m(\angle 3) = m(\angle 2) = 2x$$

$\therefore \angle 4$ is an exterior angle of $\triangle ACD$

$$\therefore m(\angle 4) = m(\angle A) + m(\angle 3) = x + 2x = 3x \quad (1)$$

$$\therefore m(\angle DEC) = 180^\circ - 126^\circ = 54^\circ$$

In $\triangle CDE$, $\therefore DC = DE$

$$m(\angle 4) = m(\angle DEC) = 54^\circ \quad (2)$$

From (1) and (2), $\therefore 3x = 54^\circ$

$$x = \frac{54^\circ}{3} = 18^\circ \quad (\text{The req.})$$

$$\text{Similarly } m(\angle C) = m(\angle BED) \quad (3)$$

$$\text{From (1), (2) and (3), } \therefore m(\angle A) = m(\angle C)$$

$$AB = BC \quad (\text{Q.E.D.})$$

10

- $MB = MC$ $\therefore m(\angle B) = m(\angle C)$ (1)
 $\overline{AD} \parallel \overline{BC}$ and \overline{AC} is a transversal to them
 $m(\angle A) = m(\angle C)$ (alternate angles) (2)
 similarly $m(\angle D) = m(\angle B)$ (3)
 from (1), (2) and (3) $m(\angle A) = m(\angle D)$
 $\therefore MA = MD$ (Q.E.D.)

11

- $B \in \overline{AE}$ $\therefore \angle ABC$ supplements $\angle EBC$
 similarly $\angle ACB$ supplements $\angle ACD$
 $\therefore m(\angle EBC) = m(\angle ACD)$
 $m(\angle ABC) = m(\angle ACB)$
 $\therefore AB = AC = 8 \text{ cm}$
 The perimeter of $\triangle ABC = 8 + 8 + 10 = 26 \text{ cm}$
 (The req.)

12

- $AB = AC$ $\therefore m(\angle B) = m(\angle C)$ (1)
 $\overline{AB} \parallel \overline{DE}$, \overline{BE} is a transversal to them
 $m(\angle B) = m(\angle DEF)$ (corresponding angles) (2)
 similarly $m(\angle C) = m(\angle DFE)$ (3)
 from (1), (2) and (3)
 $m(\angle DEF) = m(\angle DFE)$
 $DE = DF$ (Q.E.D. 1)
 In $\triangle ABC$, $\triangle DEF$
 $m(\angle B) = m(\angle DEF)$, $m(\angle C) = m(\angle DFE)$
 $\therefore m(\angle BAC) = m(\angle EDF)$ (Q.E.D. 2)

13

- $\overline{ED} \parallel \overline{BC}$, \overline{DB} is a transversal to them.
 $\therefore m(\angle EDB) = m(\angle DBC)$ (alternate angles)
 but $m(\angle EBD) = m(\angle DBC)$
 $m(\angle EDB) = m(\angle EBD)$ $\therefore EB = ED$
 $\triangle EBD$ is an isosceles triangle (Q.E.D.)

14

- $\overline{AE} \parallel \overline{BC}$ and \overline{DB} is a transversal to them
 $m(\angle DAE) = m(\angle B)$ (corresponding angles)
 $\overline{AE} \parallel \overline{BC}$, \overline{AC} is a transversal to them
 $m(\angle EAC) = m(\angle C)$ (alternate angles)
 but $m(\angle DAE) = m(\angle EAC)$
 $m(\angle B) = m(\angle C)$
 $\therefore AB = AC$ (Q.E.D.)

15

- $m(\angle ABC) = m(\angle ACB)$ $\therefore AB = AC$
 $\triangle ADB \cong \triangle AEC$ in them
 $\begin{cases} AB = AC \\ DB = EC \\ m(\angle D) = m(\angle E) = 90^\circ \end{cases}$
 $\therefore \triangle ADB \cong \triangle AEC$
 $m(\angle DAB) = m(\angle CAE)$ (Q.E.D.)

16

- In $\triangle YZX$,
 $YZ = YX$ $\therefore m(\angle Z) = \frac{180^\circ - 50^\circ}{2} = 65^\circ$
 $m(\angle ZMX) = 50^\circ + 15^\circ = 65^\circ$
 \therefore In $\triangle MZX$, $m(\angle Z) = m(\angle ZMX)$ $\therefore MX = ZX$
 $\therefore \triangle MZX$ is an isosceles triangle (Q.E.D.)

17

- In $\triangle ABC$, $\therefore AB = AC$
 $m(\angle ACB) = m(\angle ABC) = \frac{180^\circ - 70^\circ}{2} = 55^\circ$
 $m(\angle MCA) = 25^\circ$ $\therefore m(\angle MCB) = 55^\circ - 25^\circ = 30^\circ$
 $m(\angle MBC) = m(\angle MCB)$ $\therefore MB = MC$
 $\therefore \triangle MBC$ is an isosceles triangle (Q.E.D.)

18

- $\angle ADC$ is an exterior angle of $\triangle ADB$
 $\therefore m(\angle ADC) = 40^\circ + 30^\circ = 70^\circ$
 $AD = AC$ $\therefore m(\angle C) = m(\angle ADC) = 70^\circ$
 \therefore In $\triangle ABC$, $m(\angle BAC) = 180^\circ - (40^\circ + 70^\circ) = 70^\circ$
 $\therefore m(\angle BAC) = m(\angle C)$ $\therefore AB = BC$ (Q.E.D.)

19

- $AB = AC$
 $\therefore m(\angle ABC) = m(\angle ACB)$
 $\frac{1}{2} m(\angle ABC) = \frac{1}{2} m(\angle ACB)$
 $\therefore m(\angle DBC) = \frac{1}{2} m(\angle ABC)$
 $m(\angle DCB) = \frac{1}{2} m(\angle ACB)$
 $m(\angle DBC) = m(\angle DCB)$ $DB = DC$
 $\therefore \triangle DBC$ is an isosceles triangle. (Q.E.D.)

20

$\triangle ABC$ is an equilateral triangle

$$m(\angle ACB) = 60^\circ$$

$\angle ACB$ is an exterior angle of $\triangle DCF$

$$m(\angle D) = 60^\circ - 30^\circ = 30^\circ$$

$$\therefore m(\angle D) = m(\angle F) \quad CD = CF$$

$\triangle DCF$ is an isosceles triangle (Q.E.D.)

21

$$\therefore DA = DC \quad \therefore m(\angle C) = m(\angle DAC) = 30^\circ$$

$\angle ADB$ is an exterior angle of $\triangle ADC$

$$m(\angle ADB) = 30^\circ + 30^\circ = 60^\circ$$

$$DA = DB$$

$\triangle ABD$ is an equilateral triangle. (Q.E.D. 1)

$$m(\angle BAD) = 60^\circ, m(\angle DAC) = 30^\circ$$

$$\therefore m(\angle BAC) = 90^\circ$$

$\therefore \triangle ABC$ is a right-angled triangle. (Q.E.D. 2)

22

$\overline{ED} \parallel \overline{AC}$, \overline{EC} is a transversal to them

$$m(\angle DEC) = m(\angle ACE) \text{ (alternate angles)}$$

$$m(\angle DEC) = m(\angle AEC)$$

$$\therefore m(\angle ACE) = m(\angle AEC)$$

$$AE = AC \quad (1)$$

$\therefore \overline{DE} \parallel \overline{AC}$, \overline{AB} is a transversal to them.

$$m(\angle A) = m(\angle BED) = 60^\circ$$

(corresponding angles) (2)

from (1) and (2)

$\triangle AEC$ is an equilateral triangle. (Q.E.D.)

23

$$\text{In } \triangle ABC \quad m(\angle ACB) = 180^\circ - (60^\circ + 90^\circ) = 30^\circ$$

$$\text{In } \triangle ECD \quad m(\angle ECD) = 180^\circ - (30^\circ + 90^\circ) = 60^\circ$$

$$C \in BD$$

$$m(\angle ACE) = 180^\circ - (30^\circ + 60^\circ) = 90^\circ$$

$$\text{In } \triangle ACE, m(\angle CAE) = 180^\circ - (90^\circ + 45^\circ) = 45^\circ$$

$$m(\angle CAE) = m(\angle CEA) = 45^\circ \quad \therefore CA = CE$$

$$\text{In } \triangle ECD, m(\angle D) = 90^\circ, m(\angle CED) = 30^\circ$$

$$\therefore CE = 2 CD = 6 \text{ cm} \quad \text{but } AC = CE$$

$$AC = 6 \text{ cm.} \quad (\text{The req.})$$

24

$$\text{In } \triangle ADE, \therefore \angle ADE = \angle AED \quad AD = AE$$

$$D \in BC, E \in \overline{BC}$$

$\angle ADB$ supplements $\angle ADE$,

$\angle AEC$ supplements $\angle AED$

but $m(\angle ADE) = m(\angle AED)$

$$m(\angle ADB) = m(\angle AEC)$$

(supplementaries of the congruent angles are congruent)

$\triangle ADB, \triangle AEC$ in them

$$\begin{cases} m(\angle ADB) = m(\angle AEC) \\ AD = AE \\ BD = CE \end{cases}$$

$$AD = AE$$

$$BD = CE$$

$$\triangle ADB \cong \triangle AEC$$

We deduce that $AB = AC$

$\therefore \triangle ABC$ is an isosceles triangle (Q.E.D.)

25

$BY = ZC$ then adding YC to both sides

$$BC = ZY$$

$\triangle ABC, \triangle XYZ$ in them

$$\begin{cases} AB = XZ \\ BC = ZY \\ m(\angle B) = m(\angle Z) \end{cases}$$

$$BC = ZY$$

$$m(\angle B) = m(\angle Z)$$

$$\therefore \triangle ABC \cong \triangle XYZ$$

We deduce that $m(\angle ACB) = m(\angle XYZ)$

$$\therefore EC = EY$$

$\triangle EYC$ is an isosceles triangle (Q.E.D.)

26

In $\triangle BMC$

$$m(\angle MBC) = m(\angle MCB)$$

$$MB = MC$$

$$\therefore m(\angle ABM) = m(\angle MCD)$$

(complementaries of equal angles in measure are equal in measure)

$\triangle ABM, \triangle DCM$ in them

$$\begin{cases} AB = DC \text{ (two sides in a square)} \\ BM = CM \text{ (proved)} \\ m(\angle ABM) = m(\angle DCM) \text{ (proved)} \end{cases}$$

$$BM = CM \text{ (proved)}$$

$$m(\angle ABM) = m(\angle DCM) \text{ (proved)}$$

- $\therefore \triangle ABM \cong \triangle DCM$ we deduce that $AM = DM$
 $\therefore \triangle AMD$ is an isosceles triangle. (Q.E.D.)

10

- In $\triangle ABF$, $\angle ABE : m(\angle B) = m(\angle AME) = 90^\circ$
 $m(\angle BAF) = m(\angle MAE)$ (AE bisects $\angle BAC$)
 $m(\angle AFB) = m(\angle E)$ (1)
 $\therefore \overline{AD} \parallel \overline{BF}$, \overline{AF} is a transversal to them.
 $m(\angle DAE) = m(\angle AFB)$ (alternate angles) (2)
 from (1) and (2).
 $\therefore m(\angle E) = m(\angle DAE)$
 $\therefore DA = DE$ (Q.E.D.)

11

- $\therefore m(\angle EAM) = m(\angle EMA) \therefore EA = EM$
 $\therefore \overline{AE}$ is a median in $\triangle ABD$, $m(\angle BAD) = 90^\circ$
 $\therefore AE = \frac{1}{2} BD$ $\therefore EM = \frac{1}{2} BD$ (1)
 $\therefore E$ is the midpoint of \overline{BD} , $\overline{EM} \parallel \overline{BC}$
 $\therefore EM = \frac{1}{2} BC$ (2)
 from (1) and (2)
 $\therefore \frac{1}{2} BD = \frac{1}{2} BC \therefore BD = BC$ (Q.E.D.)

12

- $\therefore m(\angle B) = m(\angle C) \therefore AB = AC$
 $2x - 1 = x + 3 \therefore 2x - x = 3 + 1 \therefore x = 4$
 $AB = AC = 2 \times 4 - 1 = 7 \text{ cm}$, $BC = 9 - 4 = 5 \text{ cm}$.
 The perimeter of $\triangle ABC = 7 + 7 + 5 = 19 \text{ cm}$. (The req.)

30

- (1) $\therefore 3x + x + 50^\circ + 30^\circ = 180^\circ$
 $\therefore 4x + 80^\circ = 180^\circ$
 $\therefore 4x = 180^\circ - 80^\circ = 100^\circ \therefore x = \frac{100^\circ}{4} = 25^\circ$
 $\therefore m(\angle A) = 3 \times 25^\circ = 75^\circ$,
 $m(\angle B) = 25^\circ + 50^\circ = 75^\circ$
 $\therefore m(\angle A) = m(\angle B) \therefore CB = CA$
 (2) $\therefore 2z + 3z - 10^\circ + z + 40^\circ = 180^\circ$
 $\therefore 6z + 30^\circ = 180^\circ$
 $\therefore 6z = 180^\circ - 30^\circ = 150^\circ \therefore z = \frac{150^\circ}{6} = 25^\circ$
 $\therefore m(\angle B) = 3 \times 25^\circ - 10^\circ = 65^\circ$
 $\therefore m(\angle C) = 25^\circ + 40^\circ = 65^\circ$
 $\therefore m(\angle B) = m(\angle C) \therefore AB = AC$

- (3) $\therefore \angle DBC$ is an exterior angle of $\triangle ABC$
 $\therefore 3x = x - 20^\circ + x + 70^\circ$
 $\therefore 3x = 2x + 50^\circ \therefore x = 50^\circ$
 $\therefore m(\angle A) = 50^\circ - 20^\circ = 30^\circ$,
 $m(\angle C) = 50^\circ + 70^\circ = 120^\circ$
 $m(\angle ABC) = 180^\circ - (30^\circ + 120^\circ) = 30^\circ$
 $m(\angle A) = m(\angle ABC) \therefore CB = CA$

4

- $BA = BC$, $\overline{BD} \perp \overline{AC}$
 $\therefore \overline{BD}$ bisects each of $\angle ABC$, \overline{AC}
 $AC = 2 AD = 40 \text{ cm}$
 $\therefore m(\angle DBC) = \frac{1}{2} m(\angle ABC) = 45^\circ$ (1) (First req.)
 $\triangle ABC$ in which $m(\angle B) = 90^\circ$, $BA = BC$
 $m(\angle C) = 45^\circ$ (2)
 From (1) and (2), $\therefore DB = DC$
 $\therefore \triangle DBC$ is an isosceles triangle. (Second req.)

5

- In $\triangle ABC$: $AB = AC$,
 M is the point of
 intersection of its medians
 $\therefore \overline{AF}$ is a median of $\triangle ABC$

Geometry

$$\overline{AM} \perp \overline{BC} \quad (\text{Q.E.D. 1})$$

$$\overline{AM} \text{ bisects } \angle BAC \quad (\text{Q.E.D. 2})$$

$$\text{In } \triangle ABC, \because AB = AC, \therefore \overline{AD} \perp \overline{BC}$$

$$BC = 2 \times 5 = 10 \text{ cm} \quad (\text{First req.})$$

In the right-angled triangle ADB at D

$$AD = \sqrt{(13)^2 - (5)^2} = 12 \text{ cm}$$

$$\therefore \text{The area of } \triangle ABC = \frac{1}{2} \times 10 \times 12 = 60 \text{ cm}^2 \quad (\text{Second req.})$$

$$AB = AC, \overline{AD} \perp \overline{BC} \therefore BD = \frac{1}{2} BC = 5 \text{ cm.}$$

$$\therefore m(\angle BAC) = 2 \times 30^\circ = 60^\circ$$

$\triangle ABC$ is an equilateral triangle

$$AB = 10 \text{ cm}$$

In $\triangle ADB$ which is right-angled at D

$$AD = \sqrt{(10)^2 - (5)^2} = 5\sqrt{3} \text{ cm} \quad (\text{First req.})$$

$$\text{The number of axes of symmetry of } \triangle ABC = 3 \quad (\text{Second req.})$$

$$\therefore m(\angle ADB) = m(\angle ABD)$$

$$\therefore \text{In } \triangle ABD, AB = AD \quad (\text{Q.E.D.1})$$

$$\therefore \overline{AE} \text{ bisects } \angle BAD \therefore \overline{AE} \perp \overline{BD} \quad (\text{Q.E.D.2})$$

$$\therefore BE = ED \quad (\text{Q.E.D.3})$$

In $\triangle ACD$

$\therefore E$ is the midpoint of \overline{AD}

$$\therefore \overline{CE} \perp \overline{AD} \therefore DC = AC$$

$\therefore \triangle ACD$ is an isosceles triangle

$\therefore \angle ADC$ is an exterior angle of $\triangle ADB$

$$\therefore m(\angle ADC) = 20^\circ + 30^\circ = 50^\circ$$

From $\triangle CDE$

$$m(\angle DCE) = 180^\circ - (90^\circ + 50^\circ) = 40^\circ$$

$\therefore \overline{CE}$ bisects $\angle ACD$

$$\therefore m(\angle ACE) = m(\angle DCE) = 40^\circ \quad (\text{The req.})$$

In $\triangle ADC$

E is the midpoint of \overline{DC}

$$\therefore \overline{AE} \perp \overline{DC} \therefore AD = AC$$

$\therefore \triangle ADC$ is an isosceles triangle

$$m(\angle ADC) = m(\angle C) = 70^\circ$$

$\therefore \angle ADC$ is an exterior angle of $\triangle ABD$

$$\therefore m(\angle ADC) = m(\angle B) + m(\angle BAD)$$

$$\therefore BD = AC, AD = AC$$

$$m(\angle B) = m(\angle BAD) = \frac{70^\circ}{2} = 35^\circ \quad (\text{The req.})$$

14

In $\triangle XYL, \because XL = XY, M$ is the midpoint of \overline{LY}

$\therefore \overline{XM}$ is the axis of \overline{LY}

similarly in $\triangle ZYL$, \overline{ZM} is the axis of \overline{LY}

$X \in M$ and Z are on the same straight line. (Q.E.D.)

15

$AB = AC \quad \therefore A \in \text{the axis of } \overline{BC}$ (1)

$m(\angle ABC) = m(\angle ACB)$

$m(\angle ABD) = m(\angle ACD)$

by subtracting

$m(\angle DBC) = m(\angle DCB)$

$\therefore DB = DC \quad \therefore D \in \text{the axis of } \overline{BC}$ (2)

From (1) and (2)

$\therefore \overline{AD}$ is the axis of \overline{BC} (Q.E.D.)

16

AD bisects the base of $\triangle ABC$ which is an isosceles triangle

$\overline{AD} \perp \overline{BC} \quad \therefore m(\angle ADB) = 90^\circ$

$\therefore \overline{XY} \parallel \overline{BC}$, \overline{AD} is a transversal to them.

$\therefore m(\angle YAD) = m(\angle ADB) = 90^\circ$ (alternate angles)

$\therefore \overline{AD} \perp \overline{XY}$ (Q.E.D.)

17

$\therefore AB = AC, EB = EC \quad \therefore \overline{AE}$ is the axis of \overline{BC}

$BD = DC$ (First req.)

$DC = 3 \text{ cm}$

In $\triangle ADC$ which is right-angled at D

$AD = \sqrt{(10)^2 - (3)^2} = \sqrt{100 - 9} = \sqrt{91} \text{ cm.}$

(Second req.)

18 Constr. :

Draw $\overline{MF} \perp \overline{BC}$ to meet \overline{BC} at F

and \overline{AD} at E

Proof: $\therefore \overline{AD} \perp \overline{BC}$, \overline{AC} is

a transversal to them.

$m(\angle A) = m(\angle C)$ similarly $m(\angle B) = m(\angle D)$

$MB = MC \quad \therefore m(\angle B) = m(\angle C)$

$\therefore m(\angle A) = m(\angle D) \quad \therefore AM = DM$

$\triangle AMD$ is an isosceles triangle (Q.E.D. 1)

In $\triangle MBC$ $MB = MC$, $\overline{MF} \perp \overline{BC}$

\overline{MF} is the axis of symmetry of $\triangle MBC$

$\therefore \overline{AD} \parallel \overline{BC}$, \overline{FE} is a transversal to them.

$m(\angle AEM) = m(\angle BFM) = 90^\circ$

$\overline{ME} \perp \overline{AD}$

$\therefore MA = MD \quad \therefore \overline{ME}$ is the axis of $\triangle AMD$

$\therefore \overline{EF}$ is the axis of symmetry of each of $\triangle AMD$

$\triangle BMC$ (Q.E.D. 2)

19

$AB = AC$

$\therefore m(\angle 1) = m(\angle 4)$ (1)

$\therefore m(\angle DBC) = 180^\circ - m(\angle 1)$ (2)

$\therefore m(\angle BCE) = 180^\circ - m(\angle 4)$ (3)

From (1), (2) and (3)

$m(\angle DBC) = m(\angle BCE)$

$\therefore \frac{1}{2} m(\angle DBC) = \frac{1}{2} m(\angle BCE)$

$m(\angle 2) = m(\angle 5) \quad \therefore FB = FC$

$\therefore \triangle BFC$ is an isosceles triangle (Q.E.D. 1)

$AB = AC, FB = FC$

$\therefore \overline{AF}$ is the axis of symmetry of \overline{BC} (Q.E.D. 2)

20

Constr. : Draw \overline{BD} , \overline{BE}

Proof: $\triangle ABE \cong \triangle CBD$ in them

$\begin{cases} m(\angle A) = m(\angle C) \\ AB = CB \\ AE = CD \end{cases}$

$\triangle ABE \cong \triangle CBD$

\therefore then we deduce that $BE = BD$

$\therefore \overline{BF}$ is a median of $\triangle BED$ which is isosceles

$\overline{BF} \perp \overline{DE}$ (Q.E.D.)

21

1 c 2 b 3 c 4 b 5 a 6 b

22

In $\triangle ABD$

$\therefore E$ is the midpoint of \overline{AB}

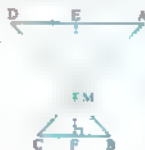

$\therefore \overline{DE} \perp \overline{AB} \quad \therefore DA = DB$

$\therefore m(\angle A) = m(\angle ABD)$ (1)

in $\triangle DBC$

O is the midpoint of \overline{BC}

$\therefore \overline{DO} \perp \overline{BC} \quad \therefore DB = DC$

Geometry

$$m(\angle DBC) = m(\angle C)$$

$$\therefore m(\angle ABD) + m(\angle DBC) = 130^\circ$$

From (1), (2) and (3)

$$m(\angle A) + m(\angle C) = 130^\circ$$

From the quadrilateral ABCD

$$m(\angle ADC) = 360^\circ - (130^\circ + 130^\circ) = 100^\circ \text{ (The req.)}$$

23

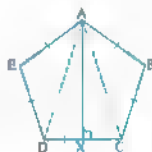

Constr. :

Draw \overline{AD} , \overline{AC}

Proof :

\therefore ABCDE is a regular pentagon

The measure of each interior angle = 108°

$$(2) \quad \therefore AB = BC = CD = DE = EA$$

$$(3) \quad \text{In } \triangle ABC \quad AB = BC \therefore m(\angle ABC) = 108^\circ$$

$$\therefore m(\angle BAC) = \frac{180^\circ - 108^\circ}{2} = 36^\circ$$

$\therefore \triangle ABC \cong \triangle AED$ in them

$$\begin{cases} AB = AE \\ BC = ED \\ m(\angle ABC) = m(\angle AED) = 108^\circ \end{cases}$$

$$\triangle ABC \cong \triangle AED$$

Then we deduce that $m(\angle EAD) = m(\angle BAC) = 36^\circ$

$\therefore AC = AD \therefore \triangle ADC$ is an isosceles triangle

$\therefore \overline{AX} \perp \overline{CD}$

$$m(\angle CAX) = m(\angle DAX)$$

$$= \frac{108^\circ - (36^\circ + 36^\circ)}{2} = 18^\circ \quad \text{(The req.)}$$

Answers of unit five

Answers of Exercise 6

1

- 1 > 2 > 3 < 4 <
 5 < 6 > 7 > <

2

- 1 $m(\angle 1) < m(\angle 3)$ 2 $m(\angle 4) < m(\angle 2)$
 3 $m(\angle 3) < m(\angle 5)$ 4 $m(\angle 6) < m(\angle 2)$
 5 $m(\angle 1) < m(\angle 3) < m(\angle 5)$
 6 $m(\angle 3) < m(\angle 5) < m(\angle 7)$
 7 $m(\angle 1) < m(\angle 3) < m(\angle 5) < m(\angle 7)$

3

$\overline{AD} \perp \overline{BC}$ from its midpoint

$\therefore \overline{AD}$ is the axis of symmetry of $\triangle ABC$

$\therefore AB = AC$

$\angle AEB$

$AB > AE$

$AC > AE$

(Q.E.D.)

4

$\therefore \overline{AB} \parallel \overline{CD}$, \overline{BC} is a transversal

$m(\angle BCD) = m(\angle ABC)$ (alternate angles)

$m(\angle BCD) + m(\angle ACB) > m(\angle ABC)$

$m(\angle ACD) > m(\angle ABC)$ (1) (Q.E.D.1)

$E \in \overline{CD}$, $\therefore \angle ADE$ is an exterior angle of $\triangle ACD$

$m(\angle ADE) > m(\angle ACD)$ (2)

From (1) and (2):

$\therefore m(\angle ADE) > m(\angle ABC)$ (Q.E.D.2)

5

$E \in \overline{CB}$, $\therefore \angle ABE$ is an exterior angle of $\triangle ABC$

$\therefore m(\angle ABE) > m(\angle A)$ (1)

$\triangle ABM \cong \triangle CDM$ in them

$AM = MC$

$MB = MD$

$m(\angle AMB) = m(\angle CDM)$ (V.O.A.)

$\triangle ABM \cong \triangle CDM$, then we deduce that

$m(\angle A) = m(\angle ACD)$ and from (1)

$m(\angle ABE) > m(\angle ACD)$ (Q.E.D.)

6

The figure is a parallelogram.

$AD = BC$, $AB = CD$

$DX < BY$ $\therefore AX > CY$

$AX + AB > CY + CD$ (Q.E.D.)

7

$D \in \overline{AB}$, $\angle ADC$ is an exterior angle of $\triangle DBC$
 $m(\angle ADC) > m(\angle B)$

But $m(\angle ADC) = m(\angle ACD)$

because $\triangle ADC$ in which $AD = AC$

$\therefore m(\angle ACD) > m(\angle B)$

$m(\angle ACD) + m(\angle DCB) > m(\angle B)$

$m(\angle ACB) > m(\angle B)$ (Q.E.D.)

8

In $\triangle AXY$, $m(\angle AXY) = m(\angle AYZ)$

$AX = AY$

(1)

$AC > AB$

$\therefore AY + YC > AX + XB$ (2)

From (1) and (2):

$YC > XB$ (Q.E.D.)

9

$\angle ADC$ is an exterior angle of $\triangle DBC$

$m(\angle ADC) > m(\angle B)$

But $m(\angle B) = m(\angle ACB)$

(because $AB = AC$ in $\triangle ABC$)

$m(\angle ADC) > m(\angle ACB)$ (Q.E.D.)

10

$m(\angle ACB) > m(\angle ABC)$

\therefore The supplement

of $\angle ABC >$ the supplement of $\angle ACB$

$\therefore m(\angle ABD) > m(\angle ACE)$

$\frac{1}{2}m(\angle ABD) > \frac{1}{2}m(\angle ACE)$

i.e. $m(\angle ABX) > m(\angle ACY)$ (Q.E.D.)

11

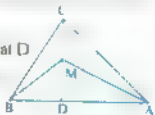

Const: Draw \overline{CM} to intersect \overline{BA} at D

Proof: $\angle AMD$ is an exterior angle of $\triangle AMC$

$m(\angle AMD) > m(\angle ACM)$ (1)

$\angle BMD$ is an exterior angle of $\triangle CMB$

$m(\angle BMD) > m(\angle BCM)$ (2)

Geometry

Adding (1) and (2)

$$\begin{aligned} m(\angle AMD) + m(\angle BMD) &> m(\angle ACM) \\ &+ m(\angle BCM) \\ m(\angle AMB) &> m(\angle C) \end{aligned} \quad (\text{Q.E.D.})$$

12

$$\begin{aligned} m(\angle B) &> m(\angle C) \\ m(\angle B) + \frac{1}{2}m(\angle BAC) &> m(\angle C) + \frac{1}{2}m(\angle BAC) \\ m(\angle B) + m(\angle BAD) &> m(\angle C) + m(\angle CAD) \\ \text{but } m(\angle B) + m(\angle BAD) &= m(\angle CDA) \\ (\text{an exterior angle of } \triangle ABD) \\ m(\angle C) + m(\angle CAD) &= m(\angle BDA) \\ (\text{an exterior angle of } \triangle ACD) \\ m(\angle ADC) &> m(\angle ADB) \\ \text{Their sum} &= 180^\circ \quad \therefore m(\angle ADC) > \frac{180^\circ}{2} \\ \text{i.e. } m(\angle ADC) &> 90^\circ \\ \text{i.e. } \angle ADC &\text{ is an obtuse angle.} \end{aligned} \quad (\text{Q.E.D.})$$

13

$$\begin{aligned} AC &= AD \quad \therefore m(\angle D) = m(\angle ACD) \\ m(\angle ACB) &> m(\angle ABC) \\ m(\angle ACB) + m(\angle ACD) &> m(\angle ABC) + m(\angle D) \\ \therefore m(\angle BCD) &> m(\angle B) + m(\angle D) \\ \text{but the sum of measures of the interior angles} \\ \text{of } \triangle BCD &= 180^\circ \\ m(\angle BCD) &> \frac{180^\circ}{2} \quad \text{i.e. } m(\angle BCD) > 90^\circ \\ \text{i.e. } \angle BCD &\text{ is an obtuse angle} \end{aligned} \quad (\text{Q.E.D.})$$

Answers of Exercise 7

1

- The angle of the greater measure
- $\angle A$ (1) $m(\angle D)$
- $m(\angle A) < m(\angle B) < m(\angle C)$

2

$$1 > 2 > 3 \quad 2 < 3 < 1 \quad 3 > 1 > 2$$

3

- $\therefore \overline{BC}$ is the longest side
 $\therefore \angle A$ is the greatest angle in measure
 \overline{AC} is the shortest side
 $\therefore \angle B$ is the smallest angle in measure
 The ascending order of measures of the angles is
 $m(\angle B) < m(\angle C)$ and $m(\angle A)$

2 $\therefore \overline{BC}$ is the longest side.

$\therefore \angle A$ is the greatest angle in measure.

$\therefore \overline{AB}$ is the shortest side.

$\angle C$ is the smallest angle in measure

\therefore The ascending order of the measures of the angles is $m(\angle C) < m(\angle B)$ and $m(\angle A)$

4

In $\triangle ABC$: $\therefore AC > AB$

$$\therefore m(\angle ABC) > m(\angle ACB) \quad (1)$$

In $\triangle BDC$: $\therefore DB = DC$

$$\therefore m(\angle DBC) = m(\angle DCB) \quad (2)$$

Adding (1) and (2)

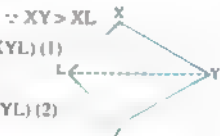

$$m(\angle ABC) + m(\angle DBC) > m(\angle ACB) + m(\angle DCB)$$

$$\therefore m(\angle ABD) > m(\angle ACD) \quad (\text{Q.E.D.})$$

5

Construction : Draw \overline{YL}

Proof : In $\triangle XYL$

$$\therefore m(\angle XLY) > m(\angle XYL) \quad (1)$$

In $\triangle ZYL$: $\therefore YZ > ZL$

$$m(\angle ZLY) > m(\angle ZYL) \quad (2)$$

Adding (1) and (2)

$$m(\angle XLY) + m(\angle ZLY) > m(\angle XYL) + m(\angle ZYL)$$

$$m(\angle XLZ) > m(\angle XYZ) \quad (\text{Q.E.D.})$$

6

Construction : Draw \overline{AC}

Proof : In $\triangle ABC$

$$BC > AB$$

$$m(\angle BAC) > m(\angle ACB) \quad (1)$$

In $\triangle DAC$: $\therefore DA = DC$

$$m(\angle DAC) = m(\angle DCA) \quad (2)$$

Adding (1) and (2)

$$m(\angle BAC) + m(\angle DAC) > m(\angle ACB) + m(\angle DCA)$$

$$m(\angle BAD) > m(\angle BCD) \quad (\text{Q.E.D.})$$

7

Construction : Draw \overline{AC}

Proof : In $\triangle ABC$

$$AB > BC$$

$$m(\angle ACB) > m(\angle BAC) \quad (1)$$

In $\triangle ADC$: $AD > DC$

$$m(\angle ACD) > m(\angle CAD) \quad (2)$$

Adding (1) and (2) :

$$m(\angle BCD) > m(\angle BAD) \quad (Q.E.D.)$$

8

In $\triangle MBC$: $MC > MB$

$$\therefore m(\angle MBC) > m(\angle MCB)$$

$$m(\angle MBC) = \frac{1}{2} m(\angle ABC)$$

$$\therefore m(\angle MCB) = \frac{1}{2} m(\angle ACB)$$

$$\frac{1}{2} m(\angle ABC) > \frac{1}{2} m(\angle ACB)$$

$$m(\angle ABC) > m(\angle ACB) \quad (Q.E.D.)$$

9

In $\triangle DBC$: $DB > DC$

$$m(\angle DCB) > m(\angle DBC)$$

In $\triangle ABC$: $AB = AC$

$$\therefore m(\angle ACB) = m(\angle ABC)$$

$$\therefore m(\angle ACB) - m(\angle DCB) < m(\angle ABC) - m(\angle DBC)$$

$$\therefore m(\angle ACD) < m(\angle ABD)$$

$$\therefore m(\angle ABD) > m(\angle ACD) \quad (Q.E.D.)$$

10

$$\text{In } \triangle ABC \quad AB > AC \therefore m(\angle C) > m(\angle B) \quad (1)$$

$\therefore \overline{XY} \parallel \overline{BC}$ and \overline{AC} is a transversal

$$\therefore m(\angle AXY) = m(\angle C) \text{ (corresponding angles)} \quad (2)$$

Similarly $\therefore \overline{XY} \parallel \overline{BC}$ and \overline{AB} is a transversal

$$\therefore m(\angle AXY) = m(\angle B) \quad (3)$$

From (1), (2) and (3) :

$$\therefore m(\angle AXY) > m(\angle AXY) \quad (Q.E.D.)$$

$$AB > AC$$

$$\therefore m(\angle C) > m(\angle B)$$

But $m(\angle C) = m(\angle AED)$ (corresponding angles)

$$\therefore m(\angle B) = m(\angle ADE) \text{ (corresponding angles)}$$

$$m(\angle AED) > m(\angle ADE)$$

In $\triangle ADE$

$$m(\angle A) = 90^\circ$$

$$\therefore m(\angle AED) + m(\angle ADE) = 90^\circ$$

$$\therefore m(\angle AED) > m(\angle ADE)$$

$$\therefore m(\angle AED) > \frac{90^\circ}{2}$$

$$m(\angle AED) > 45^\circ \quad (Q.E.D.)$$

12

$$AB > AC + BD - CF \text{ Subtracting } AD > AE$$

$$\therefore \text{In } \triangle ADE : \therefore AD > AE$$

$$\therefore m(\angle AED) > m(\angle ADE) \quad (Q.E.D.)$$

13

In $\triangle ABC$: $AC > AB$

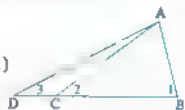

$$\therefore m(\angle 1) > m(\angle 2) \quad (1)$$

But $\angle 2$ is an exterior angle of $\triangle ACD$

$$\therefore m(\angle 2) > m(\angle 3) \quad (2)$$

$$\text{From (1) and (2) } m(\angle 1) > m(\angle 3)$$

$$m(\angle ABD) > m(\angle D) \quad (Q.E.D.)$$

14

$\therefore \triangle ABC$ is an equilateral triangle

$$\therefore m(\angle ABC) = m(\angle ACB) = 60^\circ$$

$$\therefore m(\angle EBC) < m(\angle ECB) \text{ Subtracting}$$

$$m(\angle ABC) - m(\angle EBC) > m(\angle ACB) - m(\angle ECB)$$

$$m(\angle ABE) > m(\angle ACE) \quad (1) \quad (Q.E.D. 1)$$

$$m(\angle A) = m(\angle B)$$

$$\therefore m(\angle A) = m(\angle ABE) + m(\angle EBC)$$

$$\therefore m(\angle A) > m(\angle ABE) \text{ and from (1) :}$$

$$\therefore m(\angle A) > m(\angle ABE) > m(\angle ACE) \quad (Q.E.D. 2)$$

15

In $\triangle XBC$: $XC > XB$

$$\therefore m(\angle XBC) > m(\angle XCB)$$

$ABCD$ is a rectangle

$$\therefore m(\angle ABC) = m(\angle DCB) = 90^\circ$$

$$\therefore 90^\circ - m(\angle XBC) < 90^\circ - m(\angle XCB)$$

$$m(\angle ABX) < m(\angle XCD) \quad (Q.E.D.)$$

16

In $\triangle ADE$: $AD = 5 \text{ cm}$, $AE = 3 \text{ cm}$, $\therefore AD > AE$

$$\therefore m(\angle AED) > m(\angle ADE)$$

From the equilateral triangle ABC we find that :

$$m(\angle A) = 60^\circ$$

$$m(\angle AED) + m(\angle ADE) = 180^\circ - 60^\circ = 120^\circ$$

$$\therefore m(\angle AED) > 60^\circ \quad (Q.E.D.)$$

17

In $\triangle ABC$: $AB > AC$ $\therefore m(\angle ACB) > m(\angle ABC)$

$$\therefore 180^\circ - m(\angle ACB) < 180^\circ - m(\angle ABC)$$

- $D \in \overline{AB}$, $E \in \overline{AC}$ $\therefore m(\angle BCE) < m(\angle DBC)$
 \overline{BF} bisects $\angle DBC$, \overline{CF} bisects $\angle BCE$
 $m(\angle BCF) < m(\angle FBC)$
 $m(\angle FBC) > m(\angle BCF)$ (Q.E.D.)

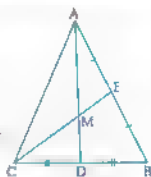

18

- In $\triangle DBC$: $\because DB > DC$
 $m(\angle 3) > m(\angle 4)$ (1)
 In $\triangle DAC$: $\because DA > DC$
 $m(\angle 2) > m(\angle 1)$ (2)
 From (1), and (2) and adding
 $m(\angle 3) + m(\angle 2) > m(\angle 4) + m(\angle 1)$
 $\therefore m(\angle ACB) > m(\angle DBC) + m(\angle DAC)$ (Q.E.D.)

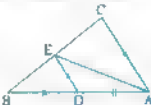

19

- $\because \overline{AD}$, \overline{CE} are two medians of $\triangle ABC$ intersecting at M
 $AM = 2MD$, $MC = 2ME$
 $MD > ME$ $\therefore AM > MC$
 thus in $\triangle AMC$
 $m(\angle CAM) < m(\angle MCA)$ (Q.E.D.)

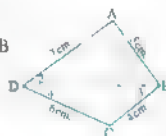

20

- In $\triangle ABC$: $\because D$ is the midpoint
 of \overline{AB} , $\overline{DE} \parallel \overline{AC}$
 $DE = \frac{1}{2} AC$
 $AD = \frac{1}{2} AB$ $\because AB > AC$
 $\therefore \frac{1}{2} AB > \frac{1}{2} AC$
 $AD > DE$ $\therefore m(\angle AED) > m(\angle DAE)$
 But $m(\angle AED) = m(\angle CAE)$ (alternate angles)
 $m(\angle CAE) > m(\angle DAE)$ (Q.E.D.)

21

- First construction :** Draw \overline{BD}
Proof : In $\triangle ABD$: $\because AD > AB$
 $m(\angle 1) > m(\angle 2)$ (1)
 In $\triangle CBD$: $\because CD > CB$
 $m(\angle 3) > m(\angle 4)$ (2)
 Adding (1) and (2)
 $m(\angle 1) + m(\angle 3) > m(\angle 2) + m(\angle 4)$
 $m(\angle ABC) > m(\angle ADC)$ (Q.E.D.)

Second construction : Draw \overline{AC}

- Proof :** In $\triangle ABC$: $\because BA > BC$
 $\therefore m(\angle 1) > m(\angle 2)$ (3)
 In $\triangle ADC$: $\because AD > DC$
 $m(\angle 3) > m(\angle 4)$ (4)
 Adding (3) and (4)
 $m(\angle 1) + m(\angle 3) > m(\angle 2) + m(\angle 4)$
 $m(\angle BCD) > m(\angle BAD)$ (Q.E.D. 2)
 The sum of measure of the interior angles
 of the quadrilateral = 360°
 and from the two preceding requirements
 $\therefore m(\angle B) + m(\angle C) > \frac{360^\circ}{2}$
 $m(\angle B) + m(\angle C) > 180^\circ$ (Q.E.D. 3)

22

- AE is a median in $\triangle ABD$, $m(\angle A) = 90^\circ$
 $\therefore AE = \frac{1}{2} BD$
 $\because E$ is the midpoint of \overline{BD} , $\overline{EX} \parallel \overline{AC}$
 $\therefore EX = \frac{1}{2} DC$
 $\therefore AE > EX$
 $\therefore \frac{1}{2} BD > \frac{1}{2} DC$
 $BD > DC$
 $m(\angle C) > m(\angle DBC)$ (Q.E.D.)

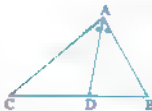

23

- In $\triangle ABM$: $\because AM > BM$ $\therefore m(\angle ABM) > m(\angle A)$ (1)
 $AM = CM$ \therefore In $\triangle CBM$: $MC > MB$
 $m(\angle MBC) > m(\angle C)$ (2)
 Adding (1) and (2)
 $m(\angle ABM) + m(\angle MBC) > m(\angle A) + m(\angle C)$
 $m(\angle ABC) > m(\angle A) + m(\angle C)$
 $\angle ABC$ is an obtuse angle. (Q.E.D.)

24

- In $\triangle ABD$: $\because m(\angle B) = 90^\circ - m(\angle BAD)$ (1)
 From $\triangle ACD$: $m(\angle C) = 90^\circ - m(\angle CAD)$ (2)
 From $\triangle ABC$: $AC > AB$ $\therefore m(\angle B) > m(\angle C)$ (3)
 From (1), (2) and (3)
 $90^\circ - m(\angle BAD) > 90^\circ - m(\angle CAD)$
 $m(\angle BAD) < m(\angle CAD)$ (Q.E.D.)

25

 In $\triangle ABC$: $\because AC > AB$
 $\therefore m(\angle B) > m(\angle C)$
 $m(\angle BAD) = m(\angle DAC)$
 $(\overline{AD} \text{ bisects } \angle A)$
 $m(\angle B) + m(\angle BAD) > m(\angle C) + m(\angle DAC)$
 $\angle ADC$ is an exterior angle of $\triangle ABD$
 $\therefore m(\angle ADC) = m(\angle B) + m(\angle BAD)$
 $\angle ADB$ is an exterior angle of $\triangle ADC$
 $m(\angle ADB) = m(\angle C) + m(\angle DAC)$
 $m(\angle ADC) > m(\angle ADB)$
 $m(\angle ADC) + m(\angle ADB) = 180^\circ$
 $\therefore m(\angle ADC) > \frac{180^\circ}{2} \quad \text{i.e. } m(\angle ADC) > 90^\circ$
 $\therefore \angle ADC$ is an obtuse angle (Q.E.D.)

26

 Let $\overline{CA} \cap \overline{DB} = \{M\}$

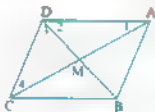

The two diagonals in the parallelogram bisect each other

 $\therefore AC > BD \quad \therefore MA > MD, MC > MD$

 From $\triangle AMD$: $\because AM > MD$
 $\therefore m(\angle 2) > m(\angle 1)$ (1)

 From $\triangle DMC$: $\because MC > MD$
 $m(\angle 3) > m(\angle 4)$ (2)

Adding (1) and (2)

 $m(\angle 2) + m(\angle 3) > m(\angle 1) + m(\angle 4)$
 $m(\angle D) > m(\angle 1) + m(\angle 4)$
 \therefore In $\triangle ADC$
 $m(\angle D) > m(\angle CAD) + m(\angle ACD)$
 $\angle D$ is an obtuse angle (Q.E.D.)

27

 \therefore The perimeter of $\triangle ACD$
 $= CD + DA + AC$

 The perimeter of $\triangle ABD$
 $= BD + DA + AB$
 \therefore The perimeter of $\triangle ACD >$ the perimeter of $\triangle ABD$
 $\therefore CD + DA + AC > BD + DA + AB$

 But $CD = BD$
 $\therefore AC > AB \quad \therefore m(\angle B) > m(\angle C)$ (Q.E.D.)

28

Construction: Draw $\overline{DE} \parallel \overline{AC}$ to intersect \overline{AB} at E

Proof: In $\triangle ABC$: $\because \overline{DE} \parallel \overline{AC}$

 D is the midpoint of \overline{BC}
 \therefore E is the midpoint of \overline{BA}
 $AE = \frac{1}{2} AB, DE = \frac{1}{2} AC$
 $\therefore AB > AC$
 $AE > DE$
 $m(\angle 2) > m(\angle 3)$ (1)

 $\because \overline{DE} \parallel \overline{AC}, \overline{AD}$ is a transversal to them

 $m(\angle 1) = m(\angle 2)$ (Alternate angles)

 From (1) $m(\angle 1) > m(\angle 3)$
 $\therefore m(\angle BAD) < m(\angle CAD)$ (Q.E.D.)

Answers of Exercise 8

1

① A side greater in length than that opposite to the other angle, greater in measure than the measure of the angle opposite to the other side

② The shortest side

③ The hypotenuse.

④ The length of the line segment drawn from the given point perpendicular to the given straight line

 ⑤ \overline{AB}

 ⑥ \overline{AC}

 ⑦ \overline{BC}

2

① c

② a

③ d

④ a

3

 ① $>, >, <$

 ② $>, >, >$

 ③ $>, >, >, >$

 ④ $>, <, <, >$

 ④ $YZ < XY < XZ$

 ⑤ $AC > AB > BC$

6

 $\therefore \overline{AE} \parallel \overline{BC}, \overline{AC}$ is a transversal.

 $\therefore m(\angle C) = m(\angle EAC) = 30^\circ$ (alternate angles) (1)

 $\because \overline{AE} \parallel \overline{BC}, \overline{AB}$ is a transversal.

 $m(\angle B) = m(\angle DAE) = 70^\circ$

(corresponding angles) (2)

 From (1) and (2): $\therefore m(\angle B) > m(\angle C)$
 $\therefore AC > AB$ (Q.E.D.)

7

$C \in \overline{AE}$ $\therefore m(\angle ACB) = 180^\circ - 120^\circ = 60^\circ$
 $B \in \overline{CD}$ $\therefore m(\angle ABC) = 180^\circ - 110^\circ = 70^\circ$
 $\therefore m(\angle A) = 180^\circ - (60^\circ + 70^\circ) = 50^\circ$
 $\therefore m(\angle ACB) > m(\angle A) \therefore AB > BC$ (Q.E.D.)

8

In $\triangle ABC$: $\because AB = AC$
 $\therefore m(\angle ACB) = m(\angle B) = 65^\circ$
 $\therefore m(\angle DCB) = 65^\circ + 20^\circ = 85^\circ$
In $\triangle DBC$: $\therefore m(\angle D) = 180^\circ - (65^\circ + 85^\circ) = 30^\circ$
 \therefore In $\triangle DAC$ $m(\angle D) > m(\angle ACD)$
 $AC > AD$ but $AB = AC$
 $\therefore AB > AD$ (Q.E.D.)

9

In $\triangle DBC$: $\because DB = DC$
 $\therefore m(\angle B) = m(\angle DCB) = \frac{180^\circ - 100^\circ}{2} = 40^\circ$
 \overline{CD} bisects $\angle ACB$ $m(\angle ACD) = 40^\circ$
 $D \in \overline{AB}$
 $m(\angle ADC) = 180^\circ - 100^\circ = 80^\circ$
In $\triangle ADC$: $m(\angle A) = 180^\circ - (40^\circ + 80^\circ) = 60^\circ$
 $\therefore m(\angle ADC) > m(\angle A)$
 $\therefore AC > DC$ but $DC = DB$
 $\therefore AC > DB$ (Q.E.D.)

10

$\overline{AD} \parallel \overline{BC}$ $\therefore \overline{AC}$ is a transversal.
 $m(\angle ACB) = m(\angle DAC) = 30^\circ$ (alternate angles)
In $\triangle ABC$ $m(\angle BAC) > m(\angle ACB)$
 $BC > AB$ (Q.E.D.)

11

In $\triangle ACM$: $\because m(\angle C) = 90^\circ \therefore AM > CM$ (1)
In $\triangle BDM$ $m(\angle D) = 90^\circ \therefore BM > DM$ (2)
Adding (1) and (2) $AM + BM > CM + MD$
 $AB > CD$ (Q.E.D.)

12

In $\triangle ABC$: $\because AB = AC$
 $\therefore m(\angle ABC) = m(\angle ACB)$
 $\therefore m(\angle ABM) < m(\angle ACM)$

$m(\angle ABC) - m(\angle ABM) > m(\angle ACB) - m(\angle ACM)$

$m(\angle MBC) > m(\angle MCB)$

From $\triangle MBC$: $\therefore MC > MB$ (Q.E.D.)

13

In $\triangle ABC$: $\because \angle B$ is an obtuse angle
 $\therefore m(\angle B) > m(\angle C)$ (1)
 $\therefore \overline{DE} \parallel \overline{BC}$ $\therefore \overline{DB}$ is a transversal.
 $\therefore m(\angle ADE) = m(\angle B)$ (corresponding angles) (2)
 $\therefore \overline{DE} \parallel \overline{BC}$ $\therefore \overline{EC}$ is a transversal.
 $\therefore m(\angle AED) = m(\angle C)$ (corresponding angles) (3)
From (1), (2) and (3):
 $\therefore m(\angle ADE) > m(\angle AED)$
 $\therefore AE > AD$ (Q.E.D.)

14

In $\triangle ABC$: $\because AB > AC \therefore m(\angle C) > m(\angle B)$ (1)
 $\therefore \overline{DE} \parallel \overline{BC}$ and \overline{DC} is a transversal
 $m(\angle D) = m(\angle C)$ (alternate angles) (2)
 $\therefore \overline{DE} \parallel \overline{BC}$ $\therefore \overline{BE}$ is a transversal.
 $m(\angle E) = m(\angle B)$ (alternate angles) (3)
From (1), (2) and (3):
 $\therefore m(\angle D) > m(\angle E)$ and from $\triangle ADE$
 $AE > AD$ (Q.E.D.)

15

Const.: Draw \overline{BD}

Proof: In $\triangle ADB$

$\therefore AD = AB$
 $m(\angle ADB) = m(\angle ABD)$
 $\therefore m(\angle ADC) > m(\angle ABC)$
 $\therefore m(\angle ADC) - m(\angle ADB) > m(\angle ABC) - m(\angle ABD)$
 $m(\angle BDC) > m(\angle DBC)$
In $\triangle BDC$ $BC > CD$ (Q.E.D.)

16

In $\triangle ABC$: $\because AB > AC$
 $m(\angle ABC) < m(\angle ACB)$
 $\therefore B \in \overline{AD}$ $C \in \overline{AE}$

$$180^\circ - m(\angle ABC) > 180^\circ - m(\angle ACB)$$

$$\therefore m(\angle CBD) > m(\angle BCE)$$

$\therefore \overline{BF}$ bisects $\angle DBC$, \overline{CF} bisects $\angle BCE$

$$m(\angle FBC) > m(\angle BCF) \quad (\text{Q.E.D.1})$$

$$\therefore CF > BF \quad (\text{Q.E.D.2})$$

17

In $\triangle ABD$, $\therefore BD = AD$

$$m(\angle BAD) = m(\angle B)$$

$$m(\angle BAD) + m(\angle DAC) > m(\angle B)$$

$$\therefore m(\angle BAC) > m(\angle B) \quad \therefore BC > AC \quad (\text{Q.E.D.})$$

18

In $\triangle DBC$: $\therefore m(\angle B) > m(\angle DCB)$

$$DC > DB \text{ but } DB = AD \quad \therefore DC > AD$$

$$\therefore \text{In } \triangle ADC, m(\angle A) > m(\angle ACD) \quad (\text{Q.E.D.1})$$

$$\therefore m(\angle BDC) = 180^\circ - (70^\circ + 50^\circ) = 60^\circ$$

$\angle BCD$ is an exterior angle of $\triangle ADC$

$$\therefore m(\angle BDC) = m(\angle A) + m(\angle ACD) = 60^\circ$$

$$m(\angle A) > m(\angle ACD) \quad \therefore m(\angle ACD) < 30^\circ$$

$$m(\angle ACD) + m(\angle DCB) < 30^\circ + 50^\circ$$

$$\therefore m(\angle ACB) < 80^\circ$$

$$\angle ACB \text{ is an acute angle} \quad (\text{Q.E.D.2})$$

19

In $\triangle AFB$, $\therefore FA = FB$

$$\therefore m(\angle FBA) = m(\angle FAB) = 50^\circ \quad (1)$$

$\angle AFD$ is an exterior angle of $\triangle AFB$

$$\therefore m(\angle AFD) = 50^\circ + 50^\circ = 100^\circ \quad (2)$$

\therefore In $\triangle AFD$

$$\therefore FA = FD \quad \therefore m(\angle FDA) = \frac{180^\circ - 100^\circ}{2} = 40^\circ$$

From (1) and (2): \therefore In $\triangle ABD$

$$m(\angle ABD) > m(\angle ADB)$$

$$\therefore AD > AB \quad (\text{Q.E.D.1})$$

In $\triangle ABD$: $\therefore \overline{AF}$ is a median, $AF = \frac{1}{2}BD$

$$\therefore m(\angle DAB) = 90^\circ$$

$\therefore \overline{BC}$ is a hypotenuse of $\triangle BAC$

$$BC > AC \quad (\text{Q.E.D.2})$$

20

$\therefore \angle ADB$ is an exterior angle of $\triangle ADC$

$$\therefore m(\angle ADB) > m(\angle C)$$

$$\therefore m(\angle C) = m(\angle B), (AB = AC \text{ in } \triangle ABC)$$

$$m(\angle ADB) > m(\angle B)$$

$$\text{And from } \triangle ABD: AB > AD \quad (\text{Q.E.D.})$$

21

$\triangle ABD$, $\triangle AED$ in them

$$m(\angle B) = m(\angle AED), m(\angle BAD) = m(\angle DAE)$$

$$m(\angle ADB) = m(\angle ADE)$$

$$\therefore \triangle ABD \cong \triangle AED$$

$$\text{In them } \begin{cases} m(\angle BAD) = m(\angle EAD) \\ m(\angle ADB) = m(\angle ADE) \\ \overline{AD} \text{ is a common side} \end{cases}$$

$\therefore \triangle ABD \cong \triangle AED$, then we deduce that

$$BD = DE \quad (\text{Q.E.D.1})$$

In $\triangle DEC$

$$\therefore m(\angle DEC) = 90^\circ \quad \therefore DC > DE$$

$$DE = DB \quad \therefore DC > DB \quad (\text{Q.E.D.2})$$

22

$$m(\angle ADC) = 180^\circ - 110^\circ = 70^\circ$$

$\triangle ACD$ in which $m(\angle ADC) > m(\angle C)$

$$AC > AD \quad (1)$$

$\triangle ADB$ is an obtuse-angled at D

$$\therefore AB > AD \quad (2)$$

$$\text{By adding (1) and (2)} \quad AB + AC > 2AD \quad (\text{Q.E.D.})$$

23

$$\text{In } \triangle ABC: \therefore m(\angle B) = 90^\circ$$

\therefore The hypotenuse \overline{AC} is the longest side

$$\therefore AB < AC, BC < AC$$

$$\text{By adding: } \therefore AB + BC < 2AC \quad (\text{Q.E.D.})$$

24

$\overline{AD} \parallel \overline{CE}$, \overline{AC} is a transversal

$$\therefore m(\angle DAC) = m(\angle ACE)$$

$$\therefore m(\angle BCE) > m(\angle DAC)$$

$$\therefore m(\angle BCE) > m(\angle BAD), (\overline{AD} \text{ bisects } \angle BAC) \quad (1)$$

$\overline{AD} \parallel \overline{CE}$ and \overline{BE} is a transversal

$$\therefore m(\angle BAD) = m(\angle E) \text{ (corresponding angles)} \quad (2)$$

From (1) and (2):

$$\therefore m(\angle BCE) > m(\angle E) \text{ and from } \triangle BCE$$

$$\therefore BE > BC \quad (\text{Q.E.D.})$$

25

- ΔXYM is right-angled at Y
- $\angle XMY$ is an acute angle
- $\angle XMZ$ is an obtuse angle
- ΔXMZ is an obtuse-angled at M
- $XZ > XM$

(Q.E.D.)

26

In ΔABC : $\therefore AB > BC$

$$m(\angle C) > m(\angle A)$$

$$\therefore m(\angle ABC) = 90^\circ$$

$\angle A$ complements $\angle C$

$$\therefore \text{in } \Delta ABD: \therefore m(\angle ADB) = 90^\circ$$

$\angle A$ complements $\angle ABD$

From (2) and (3):

$$m(\angle C) = m(\angle ABD)$$

\therefore from (1),

$$m(\angle ABD) > m(\angle A)$$

$$\therefore \text{In } \Delta ABD, AD > BD$$

(Q.E.D.)

27

$\angle BDC$ is an exterior angle of ΔADC

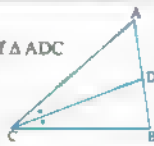

$$\therefore m(\angle BDC) > m(\angle ACD)$$

$$\therefore m(\angle BCD) = m(\angle ACD)$$

$$\therefore m(\angle BDC) > m(\angle BCD)$$

$$\therefore \text{In } \Delta BDC, BC > BD$$

(Q.E.D.)

28

$$\text{In } \Delta ABC, m(\angle B) = 90^\circ$$

$$AC > BC$$

$$\therefore AD = BE$$

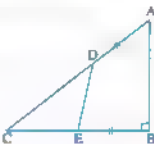

$$\therefore AC - AD > BC - BE$$

$$\therefore DC > EC$$

$$\therefore \text{In } \Delta DEC, DC > EC$$

$$\therefore m(\angle CED) > m(\angle CDE)$$

(Q.E.D.)

29

$\angle 1$ is an exterior angle of ΔXZC

$$\therefore m(\angle 1) > m(\angle 2)$$

$$\text{But } m(\angle 3) = m(\angle 2), (AB = AC \text{ in } \Delta ABC)$$

$$\therefore m(\angle 1) > m(\angle 3)$$

But $\angle 3$ is an exterior angle of ΔYZB

$$m(\angle 1) > m(\angle 4) \quad m(\angle 1) > m(\angle 4)$$

$$\therefore m(\angle 4) = m(\angle 5) \quad (\text{V.O.A.})$$

$$m(\angle 1) > m(\angle 5)$$

$$\text{and from } \Delta AYX, \therefore AY > AX \quad (\text{Q.E.D.})$$

30

$$m(\angle A) + m(\angle B) + m(\angle C) = 180^\circ$$

$$5x + 2^\circ + 6x - 10^\circ + x + 20^\circ = 180^\circ$$

$$(1) \quad \therefore 12x + 12^\circ = 180^\circ \quad \therefore 12x = 180^\circ - 12^\circ = 168^\circ$$

$$(2) \quad \therefore x = \frac{168^\circ}{12} = 14^\circ \quad \therefore m(\angle A) = 5 \times 14^\circ + 2^\circ = 72^\circ$$

$$\therefore m(\angle B) = 6 \times 14^\circ - 10^\circ = 74^\circ$$

$$(3) \quad m(\angle C) = 14^\circ + 20^\circ = 34^\circ$$

$$AB < BC < AC \quad (\text{The req.})$$

31

In $\Delta ABC, \therefore AB < AC$

$$\therefore m(\angle ACB) < m(\angle ABC)$$

$$\therefore \frac{1}{2} m(\angle ACB) < \frac{1}{2} m(\angle ABC)$$

$$\therefore m(\angle MCB) < m(\angle MBC) \quad (1)$$

$$\therefore \text{from } \Delta MBC, MB < MC \quad (2)$$

$\therefore XY \parallel CB, \overline{XB}$ is a transversal.

$$\therefore m(\angle X) = m(\angle MBC) \quad (\text{alternate angles}) \quad (3)$$

$\therefore XY \parallel BC, \overline{CY}$ is a transversal.

$$\therefore m(\angle Y) = m(\angle MCB) \quad (\text{alternate angles})$$

In ΔXMY from (1), (2) and (3),

$$\therefore m(\angle Y) < m(\angle X) \quad \therefore XM < MY \quad (4)$$

$$\text{By adding (2) and (4): } \therefore MB + MX < MC + MY$$

$$BX < CY \quad (\text{Q.E.D.})$$

Answers of Exercise B

1

$$[1] \quad \therefore 3 + 4 < 9$$

\therefore lengths are not suitable

$$[2] \quad \therefore 5 + 7 > 8$$

\therefore lengths are suitable

$$[3] \quad \therefore 4 + 6 = 10$$

\therefore lengths are not suitable

$$[4] \quad \therefore 6 + 8 > 13$$

\therefore lengths are suitable

$$[5] \quad \therefore 3 + 4 > 5$$

\therefore lengths are suitable

$$[6] \quad \therefore 9 + 9 < 19$$

\therefore lengths are not suitable

2

 Let the length of the third side be l

$$1 \quad 9 - 6 < l < 9 + 6 \quad \therefore 3 < l < 15$$

$$\therefore l \in]3, 15[$$

$$[2] \quad 3 - 3 < l < 3 + 3 \quad \therefore 0 < l < 6$$

$$l \in]0, 6[$$

$$[3] \quad 3.2 - 2.9 < l < 3.2 + 2.9$$

$$0.3 < l < 6.1 \quad \therefore l \in]0.3, 6.1[$$

$$[4] \quad 7.3 - 5.7 < l < 7.3 + 5.7$$

$$\therefore 1.6 < l < 13 \quad \therefore l \in]1.6, 13[$$

3

$$[1] \quad b$$

$$[2] \quad b$$

$$[3] \quad c$$

$$[4] \quad d$$

$$[5] \quad a$$

$$[6] \quad b$$

$$7 \quad d$$

$$[8] \quad b$$

$$[9] \quad a$$

$$[10] \quad a$$

4

 In $\triangle XLY$ $XL + LY > XY$ (The triangle inequality)

 But $XL = LZ$ $\therefore LZ + LY > XY$

$$YZ > XY \quad (\text{Q.E.D.})$$

5

 In $\triangle ABC$

$$CA + AB > BC$$

(triangle inequality)

$$\therefore CA + AB > BD + DC$$

 But $CA = DC$

$$\therefore AB > BD \quad (\text{Q.E.D.})$$

6

 From $\triangle ABD$

$$AD + DB > AB$$

(triangle inequality) (1)

 From $\triangle ADC$, $AD + DC > AC$

(Triangle inequality) (2)

Adding (1) and (2):

$$BD + DC + 2AD > AB + AC \quad (\text{Q.E.D.})$$

7

 From $\triangle ABM$ $MA + MB > AB$

(Triangle inequality) (1)

 From $\triangle BMC$ $MB + MC > BC$

(Triangle inequality) (2)

 From $\triangle AMC$ $MA + MC > AC$ (Triangle inequality) (3)

Adding (1) + (2) and (3)

$$\therefore 2MA + 2MB + 2MC > AB + BC + AC$$

$$MA + MB + MC > \frac{1}{2} \text{ the perimeter of } \triangle ABC$$

(Q.E.D.)

8

 From $\triangle AEZ$ $AE + AZ > EZ$ (Triangle inequality) (1)

 From $\triangle EBF$

$$EB + BF > EF \quad (\text{Triangle inequality}) (2)$$

 From $\triangle ZFC$, $ZC + CF > ZF$ (Triangle inequality) (3)

Adding (1) + (2) and (3):

$$\therefore AB + AC + BC > EZ + EF + ZF$$

 \therefore The perimeter of $\triangle ABC >$ the perimeter of $\triangle EFZ$

(Q.E.D.)

9

$$\text{In } \triangle DAC: DA + DC > AC \quad (1)$$

$$\text{In } \triangle DBC: DB + DC > BC \quad (2)$$

$$\text{In } \triangle DBA: DB + DA > AB \quad (3)$$

Adding (1) + (2) and (3):

$$2(DA + DB + DC) > AC + BC + AB$$

$$AC + BC + AB < 2(DA + DB + DC)$$

$$\text{The perimeter of } \triangle ABC < 2(DA + DB + DC)$$

(Q.E.D.)

$$7 - 3 < AC < 7 + 3 \quad \therefore 4 < AC < 10$$

$$\therefore AC \in]4, 10[\quad \therefore AB < AC$$

$$\therefore m(\angle C) < m(\angle B) \quad (\text{The req.})$$

11

 Assuming that ABC is a triangle

 $\therefore AB < AC + BC$ adding AB to both sides

$$\therefore 2AB < AC + BC + AB$$

$$AB < \frac{1}{2} \text{ the perimeter of } \triangle ABC$$

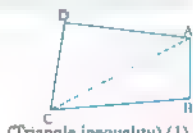

The length of any side in the triangle is less than the half of the perimeter of the triangle (Q.E.D.)

12

 Construction: Draw \overline{AC}

 Proof: From $\triangle ABC$

$$AB + BC > AC$$

(Triangle inequality) (1)

From $\triangle ADC$

$$AC + CD > AD \quad (\text{Triangle inequality}) \quad (2)$$

From (1) and (2) : $\therefore AB + BC + CD > AD$ (Q.E.D)

13

Let ABCD be a quadrilateral

$$\text{In } \triangle ABC \quad AB + BC > AC \quad (1)$$

$$\text{In } \triangle BCD \quad BC + CD > BD \quad (2)$$

$$\text{In } \triangle ACD \quad AD + CD > AC \quad (3)$$

$$\text{In } \triangle ABD \quad AB + AD > BD \quad (4)$$

Adding (1) + (2) + (3) + (4) :

$$\therefore 2AB + 2BC + 2CD + 2AD > 2AC + 2BD$$

$$\therefore AB + BC + CD + AD > AC + BD$$

\therefore The sum of lengths of the two diagonals in any convex quadrilateral is less than the perimeter of the quadrilateral. (Q.E.D)

14

Let ABCD be a quadrilateral,

$$\overline{AC} \cap \overline{BD} = \{M\}$$

$$\text{From } \triangle ABM \quad AB < MA + MB \quad (1)$$

$$\text{From } \triangle BMC \quad BC < MB + MC \quad (2)$$

$$\text{From } \triangle CMD \quad CD < MC + MD \quad (3)$$

$$\text{From } \triangle AMD \quad AD < MA + MD \quad (4)$$

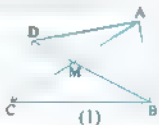

Adding (1) + (2) + (3) and (4)

$$\begin{aligned} & AB + BC + CD + AD \\ & < 2MA + 2MC + 2MB + 2MD \end{aligned}$$

$$\begin{aligned} & AB + BC + CD + DA \\ & < 2(MA + MC) + 2(MB + MD) \end{aligned}$$

$$\therefore AB + BC + CD + DA < 2(AC + BD)$$

\therefore The perimeter of the quadrilateral ABCD < twice the sum of lengths of the two diagonals. (Q.E.D)

15

Construction :

Draw \overline{BM} to cut \overline{AC} at D

Proof :

In $\triangle BDC$:

$$BC + DC > BD \quad (\text{Triangle inequality})$$

$$\therefore BC + DC > BM + MD \quad (1)$$

$$\text{In } \triangle AMD \quad AD + MD > AM \quad (\text{Triangle inequality})$$

$$\therefore AD > AM - MD \quad (2)$$

Adding (1) + (2)

$$BC + AD + DC > BM + MD + AM - MD$$

$$\therefore BC + AC > BM + AM$$

$$\therefore AM + MB < BC + AC \quad (\text{Q.E.D})$$

Another solution :

Construction :

Draw \overline{XY} Passing through

the point M where

$$X \in \overline{AC}, Y \in \overline{BC}$$

Proof : In $\triangle CXY$

$$\therefore CY + CX > XM + MY \text{ adding } BY \text{ and } AX \text{ to both sides}$$

$$\therefore CY + BY + CX + AX > XM + AX + MY + BY$$

$$\therefore BC + AC > XM + AX + MY + BY$$

$$\therefore XM + AX > AM, MY + BY > MB$$

$$BC + AC > AM + MB$$

$$\therefore AM + MB < AC + BC \quad (\text{Q.E.D.})$$

16

Construction :

Extend AF as its length

to D then draw \overline{CD}

Proof : $\triangle AFB \cong \triangle DFC$ in them

$$\begin{cases} AF = DF \text{ const} \\ BF = FC \text{ (given)} \\ m(\angle AFB) = m(\angle DFC) \text{ (V.O.A.)} \end{cases}$$

\therefore The two triangles are congruent

then we deduce that $AB = DC$

but in $\triangle ACD$ we find that :

$$AC + CD > AD \quad (\text{triangle inequality})$$

$$\therefore AC + AB > AD$$

$$AD = 2AF$$

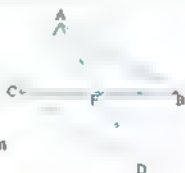

$$\therefore AC + AB > 2AF \quad (1) \text{ (Q.E.D.1)}$$

$$\text{From } \triangle ABC : \therefore AB + AC > BC$$

$$\text{i.e. } AB + AC > 2BF \quad (2)$$

$$\text{Adding (1) and (2) : } 2AB + 2AC > 2AF + 2BF$$

$$\text{Dividing by 2 : } \therefore AB + AC > AF + BF \quad (\text{Q.E.D.2})$$

1 $X \cup Y = [-3, 5]$

2 $X \cap Y = [-1, 2]$

3 $X - Y = [-3, -1[$

• $B - A = [3, 5]$ • $A \cap B = [-2, 3[$

• $A \cup B = [-\infty, 5]$ • $A^c = [3, \infty[$

3 $y = \frac{2}{\sqrt{3}+1} \times \frac{\sqrt{3}-1}{\sqrt{3}-1} = \frac{2(\sqrt{3}-1)}{3-1} = \sqrt{3}-1$
 $\therefore \frac{xy}{x-y} = \frac{(\sqrt{3}+1)(\sqrt{3}-1)}{\sqrt{3}+1 - (\sqrt{3}-1)} = \frac{3-1}{2} = 1$

4 $x = \frac{1}{\sqrt{5}+2} \times \frac{\sqrt{5}-2}{\sqrt{5}-2} = \frac{\sqrt{5}-2}{5-4} = \sqrt{5}-2$
 $y = \sqrt{5}+2 \therefore x, y \text{ are conjugate.}$
 $x^2 y^2 - (xy)^2 = [(\sqrt{5}-2)(\sqrt{5}+2)]^2$
 $= [5-4]^2 = 1$

5 $y = \frac{2}{\sqrt{7}-\sqrt{5}} \times \frac{\sqrt{7}+\sqrt{5}}{\sqrt{7}+\sqrt{5}} = \frac{2(\sqrt{7}+\sqrt{5})}{7-5}$
 $= \sqrt{7}+\sqrt{5}$

$x^2 + 2xy + y^2 = (x+y)^2$
 $= (\sqrt{7}-\sqrt{5}+\sqrt{7}+\sqrt{5})^2$
 $= (2\sqrt{7})^2 = 28$

6 $y = \frac{2}{x}$
 $= \frac{2}{\sqrt{7}+\sqrt{5}} \times \frac{\sqrt{7}-\sqrt{5}}{\sqrt{7}-\sqrt{5}} = \frac{2(\sqrt{7}-\sqrt{5})}{7-5}$
 $= \sqrt{7}-\sqrt{5}$

$x = \sqrt{7}+\sqrt{5}$

x, y are two conjugate numbers

$x^2 + xy + y^2 = (x+y)^2 - xy$
 $= (\sqrt{7}+\sqrt{5}+\sqrt{7}-\sqrt{5})^2$
 $(\sqrt{7}+\sqrt{5})(\sqrt{7}-\sqrt{5})$
 $= (2\sqrt{7})^2 - 2 = 26$

7 $(x+y)^2 = x^2 + 2xy + y^2 = (\sqrt{4+\sqrt{7}})^2$
 $+ 2(\sqrt{4+\sqrt{7}})(\sqrt{4-\sqrt{7}})$
 $+ (\sqrt{4-\sqrt{7}})^2$
 $= 4 + \sqrt{7} + 2\sqrt{(4+\sqrt{7})(4-\sqrt{7})}$
 $+ 4 - \sqrt{7}$
 $= 8 + 2\sqrt{16-7} = 8 + 2\sqrt{9} = 8 + 6 = 14$

8 $x = \frac{\sqrt{6}+\sqrt{5}}{\sqrt{6}-\sqrt{5}} \times \frac{\sqrt{6}+\sqrt{5}}{\sqrt{6}+\sqrt{5}} = \frac{11+2\sqrt{30}}{6-5}$
 $= 11 + 2\sqrt{30}$

$\therefore \bar{x} = \frac{1}{11+2\sqrt{30}} \times \frac{11-2\sqrt{30}}{11-2\sqrt{30}} = \frac{11-2\sqrt{30}}{121-120}$

$= 11 - 2\sqrt{30}$

$x + \frac{1}{x} = 11 + 2\sqrt{30} + 11 - 2\sqrt{30} = 22$

$$9 \quad \because 5x - 3 < 2x + 9 \quad \therefore 5x - 2x < 9 + 3$$

$$\therefore 3x < 12 \quad \therefore x < 4$$

$$\text{The S.S.} =]-\infty, 4[$$

$$10 \quad 5 - 3x > 11 \quad -3x > 6$$

$$\lambda < -2$$

$$\text{The S.S.} =]-\infty, -2[$$

$$11 \quad -1 < 2x + 3 \leq 9 \quad 2 < 2x \leq 6$$

$$-1 < x \leq 3$$

$$\text{The S.S.} =]-1, 3]$$

$$19 \quad \because (x-2)^3 = 125 \quad \therefore x-2 = 5$$

$$\therefore x = 7$$

$$\text{The S.S.} = \{7\}$$

$$20 \quad 1) \because \text{The volume of the sphere} = \frac{4}{3} \pi r^3$$

$$36 \pi = \frac{4}{3} \times \pi \times r^3 \quad r^3 = \frac{36 \times 3}{4} = 27$$

$$r = 3 \text{ cm}$$

$$2) \text{ The area of the sphere} = 4 \pi r^2$$

$$= 4 \times 3^2 \times \pi = 36 \pi \text{ cm}^2$$

$$21 \quad \text{The volume of the cylinder} = \pi r^2 h$$

$$\therefore h = r$$

$$\text{The volume of the cylinder} = \pi h^3$$

$$\therefore 27 \pi = \pi h^3 \quad h^3 = 27 \quad \therefore h = 3 \text{ cm}$$

$$22 \quad \text{The volume of the cylinder}$$

$$= \pi r^2 h = \pi (4\sqrt{2})^2 \times 9 = 288 \pi \text{ cm}^3$$

$$23 \quad \text{The volume of the cylinder}$$

$$= \pi r^2 h = \frac{22}{7} \times 7^2 \times 10 = 1540 \text{ cm}^3$$

$$\therefore \text{The lateral area} = 2 \pi r h$$

$$= 2 \times \frac{22}{7} \times 7 \times 10 = 440 \text{ cm}^2$$

$$24 \quad \because \text{The volume of the sphere}$$

$$= \frac{4}{3} \pi r^3 = \frac{4}{3} \times 3^3 \times \pi = 36 \pi \text{ cm}^3$$

$$\therefore \text{The volume of the cylinder}$$

$$= \text{The volume of the sphere}$$

$$\therefore \text{The volume of the cylinder} = 36 \pi \text{ cm}^3$$

$$\pi r^2 h = 36 \pi \quad \therefore 9 \pi h = 36 \pi$$

$$h = \frac{36}{9} = 4 \text{ cm}$$

$$25 \quad \therefore \text{The volume of the cylinder}$$

$$= \pi r^2 h = 3^2 \times 4 \times \pi = 36 \pi \text{ cm}^3$$

Algebra and Statistics

∴ the volume of the sphere

= The volume of the cylinder

The volume of the sphere = $36\pi \text{ cm}^3$

$$\frac{4}{3}\pi r^3 = 36\pi$$

$$r^3 = \frac{36\pi \times 3}{4\pi} = 27 \quad r = 3 \text{ cm}$$

26. The lateral area = $2\pi rh$

$$\therefore 440 = 2 \times \frac{22}{7} \times 10 \times r$$

$$r = \frac{440 \times 7}{2 \times 22 \times 10} = 7 \text{ cm}$$

The volume of the cylinder

$$= \pi r^2 h = \frac{22}{7} \times 7^2 \times 10 = 1540 \text{ cm}^3$$

Unit two

First Answers of multiple choice questions

- 1 (b) 2 (c) 3 (b) 4 (a) 5 (c)
6 (b) 7 (c) 8 (c) 9 (a) 10 (b)

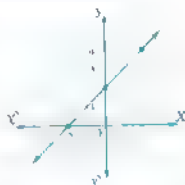

Second Answers of complete questions

- 1 1 2 undefined 3 zero
4 4 5 X-axis, zero 6 11
7 \overline{BC} or \overline{AC} 8 -1, zero 9 1
10 (0, 8)

Third Answers of essay questions

1 $y = x + 2$

x	-2	0	2
y	0	2	4

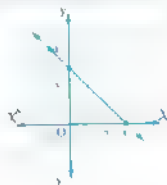

2 $y = 3 - x$

x	-1	0	3
y	4	3	0

From the graph

The point of intersection with X-axis is (3, 0)

3 $y = 2 - x$

x	-1	0	1
y	3	2	1

Taking the two points (-1, 3)

and (0, 2) which lie on the

straight line we find that

$$\text{the slope} = \frac{2-3}{0-(-1)} = -1$$

4 At $x = 0$ $2 \times 0 + 3y = 12$

$$3y = 12 \quad y = 4$$

The straight line intersects Y-axis at (0, 4)

At $y = 0$ $2x + 3 \times 0 = 12$

$$2x = 12 \quad x = 6$$

The straight line intersects X-axis at (6, 0)

5 The slope of $\overline{AB} = \frac{4-3}{1-0} = 1$

$$\therefore \text{the slope of } \overline{BC} = \frac{5-3}{2-1} = 2$$

The slope of $\overline{AB} \neq$ The slope of \overline{BC}

and the point B is a common point

∴ The points A, B and C are collinear

6 The slope of $\overline{AB} = \frac{3+2}{2-1} = 5$

$$\therefore \text{the slope of } \overline{BC} = \frac{3-3}{2+1} = \text{zero}$$

The slope of $\overline{AB} \neq$ The slope of \overline{BC}

The points A, B and C are not collinear

7 $\frac{k+7}{6-4} = 4$ $\frac{k-17}{2} = 4$

$$k-17 = 8 \quad k = 25$$

8 $(k+2k)$ satisfies the relation $3x + y = 30$

$$3k + 2k = 30 \quad 5k = 30 \quad k = 6$$

9 The slope of $\overline{AB} = \frac{5-3}{2+1} = \frac{2}{3}$

$$\therefore \text{the slope of } \overline{BC} = \frac{1-5}{8-2} = \frac{-4}{6} = -\frac{2}{3}$$

The slope of $\overline{AB} \neq$ The slope of \overline{BC}
C \notin \overline{AB}

10 \therefore The slope of $\overline{AB} = \frac{5-3}{3-3} = \frac{2}{\text{zero}}$

The slope of \overline{AB} is undefined

$\therefore \overline{AB} \parallel y\text{-axis}$

Third Answers of essay questions

- 1 In $\triangle ABC$
 $m(\angle ABC) = 90^\circ$
 $\therefore m(\angle C) = 30^\circ$
 $\therefore AC = 2AB = 2 \times 5 = 10 \text{ cm}$ (First req.)
 $\therefore D$ is the midpoint of \overline{AC}
 \overline{BD} is a median from the vertex of the right angle
 $\therefore BD = \frac{1}{2}AC = \frac{1}{2} \times 10 = 5 \text{ cm}$. (Second req.)
- 2 $\therefore M$ is the intersection point of the medians of $\triangle ABC$
 \overline{BE} and \overline{CD} are two medians of $\triangle ABC$
 $\therefore MD = \frac{1}{3}DC = \frac{1}{3} \times 15 = 5 \text{ cm}$
 $\therefore ME = \frac{1}{3}MB = \frac{1}{3} \times 6 = 2 \text{ cm}$
 $\therefore D$ is the midpoint of \overline{AB}
 $\therefore E$ is the midpoint of \overline{AC}
 $\therefore DE = \frac{1}{2}BC = \frac{1}{2} \times 14 = 7 \text{ cm}$
The perimeter of $\triangle MDE = 5 + 2 + 7 = 14 \text{ cm}$
(The req.)

- 3 $\therefore F$ and N are the midpoints of \overline{AB} and \overline{AC}
 $\therefore \overline{BN}$ and \overline{CF} are two medians of $\triangle ABC$
 $\therefore \overline{BN} \cap \overline{CF} = \{M\}$
 $\therefore M$ is the point of concurrence of the medians of $\triangle ABC$
 $MF = \frac{1}{3}CF = \frac{1}{3} \times 9 = 3 \text{ cm}$
 $\therefore MN = \frac{1}{3}BM = \frac{1}{3} \times 6 = 2 \text{ cm}$
 $\therefore F$ is the midpoint of \overline{AB}
 $AF = \frac{1}{2}AB = \frac{1}{2} \times 6 = 3 \text{ cm}$
 $\therefore N$ is the midpoint of \overline{AC}
 $\therefore AN = \frac{1}{2}AC = \frac{1}{2} \times 10 = 5 \text{ cm}$
The perimeter of the figure $AFMN$
 $= 3 + 2 + 3 + 5 = 13 \text{ cm}$ (The req.)
- 4 $\therefore \triangle EBD$ is an equilateral triangle
 $m(\angle EBD) = 60^\circ$
In $\triangle ABC$ $AB = AC$
 $\therefore m(\angle ABC) = m(\angle C) = \frac{180^\circ - 60^\circ}{2} = 60^\circ$
 $m(\angle DBE) = 60^\circ + 65^\circ = 125^\circ$ (The req.)
- 5 $\therefore \overline{AD} \parallel \overline{CB}$, \overline{AB} is a transversal to them
 $m(\angle B) = m(\angle BAD) = 30^\circ$ (alternate angles)
In $\triangle ABC$, $\therefore AB = BC$
 $m(\angle BAC) = m(\angle C) = \frac{180^\circ - 30^\circ}{2} = 75^\circ$ (The req.)
- 6 $\therefore \overline{AE} \parallel \overline{BC}$, \overline{BD} is a transversal to them
 $m(\angle B) = m(\angle DAE)$ (corresponding angles)
 $\therefore \overline{AE} \parallel \overline{BC}$, \overline{AC} is a transversal to them
 $m(\angle C) = m(\angle CAE)$ (alternate angles)
In $\triangle ABC$: $\therefore m(\angle B) = m(\angle C)$
because $AB = AC$
 $\therefore m(\angle DAE) = m(\angle CAE)$
 $\therefore \overline{AE}$ bisects $\angle DAC$ (Q.E.D.)
- 7 In $\triangle ABC$ which is right-angled at B
 $\therefore m(\angle ACB) = 30^\circ \therefore AB = \frac{1}{2}AC$
 $\therefore AB = DE \therefore DE = \frac{1}{2}AC$ (1)
 $\therefore E$ is the midpoint of \overline{AC}

\overline{DE} is a median in $\triangle ADC$

From (1) and (2),

$$m(\angle ADC) = 90^\circ \quad (\text{Q.E.D.})$$

8 In $\triangle ABC$,

X is the midpoint of \overline{AB} , Y is the midpoint of \overline{BC}

$$XY = \frac{1}{2} AC = \frac{1}{2} \times 20 = 10 \text{ cm.}$$

In $\triangle XBY$ which is right-angled at B

D is the midpoint of \overline{XY}

\overline{BD} is a median

$$BD = \frac{1}{2} XY = \frac{1}{2} \times 10 = 5 \text{ cm} \quad (\text{The req.})$$

9 In $\triangle ABD$ which is right-angled at D

F is the midpoint of \overline{AB}

\overline{DF} is a median

$$\therefore DF = \frac{1}{2} AB = \frac{1}{2} \times 16 = 8 \text{ cm}$$

$$\text{Similarly } DE = \frac{1}{2} AC = \frac{1}{2} \times 18 = 9 \text{ cm}$$

$\therefore F$ is the midpoint of \overline{AB}

E is the midpoint of \overline{AC}

$$\therefore FE = \frac{1}{2} BC = \frac{1}{2} \times 20 = 10 \text{ cm}$$

$$\text{The perimeter of } \triangle DEF = 8 + 9 + 10 = 27 \text{ cm.} \quad (\text{The req.})$$

10 $\overline{ML} \parallel \overline{YZ}$, \overline{YL} is a transversal to them

$$\therefore m(\angle LYZ) = m(\angle MLY) \quad (\text{alternate angles})$$

$$\therefore m(\angle LYZ) = m(\angle LYM)$$

$$m(\angle MLY) = m(\angle LYM)$$

$$\therefore MY = ML$$

$$\triangle LMY \text{ is an isosceles triangle} \quad (\text{Q.E.D.})$$

11 In $\triangle MXY$: $\therefore MX = MY$

$$\therefore m(\angle X) = m(\angle Y) \quad (1)$$

$\therefore \overline{XY} \parallel \overline{ZL}$, \overline{XL} is a transversal to them

$$m(\angle L) = m(\angle X) \quad (\text{alternate angles}) \quad (2)$$

$\therefore \overline{XY} \parallel \overline{ZL}$, \overline{YZ} is a transversal to them

$$m(\angle Z) = m(\angle Y) \quad (\text{alternate angles}) \quad (3)$$

From (1), (2) and (3):

$$m(\angle L) = m(\angle Z)$$

$$\therefore ML = MZ$$

$$\triangle MLZ \text{ is an isosceles triangle} \quad (\text{Q.E.D.})$$

(2) 12 In $\triangle ACD$: $\therefore X$ is the midpoint of \overline{AD}

Y is the midpoint of \overline{CD}

$$\therefore XY = \frac{1}{2} AC \quad (1)$$

In $\triangle ABC$

$$\therefore m(\angle B) = 90^\circ, m(\angle ACB) = 30^\circ$$

$$\therefore AB = \frac{1}{2} AC \quad (2)$$

$$\text{From (1) and (2)} \therefore AB = XY \quad (\text{Q.E.D.})$$

13 In $\triangle ABC$: $\therefore AB = AC$

$$\therefore m(\angle B) = m(\angle C)$$

\therefore In $\triangle ABD$ and $\triangle ACE$

$$\begin{cases} m(\angle B) = m(\angle C) \\ m(\angle BAD) = m(\angle CAE) \\ AB = AC \end{cases}$$

$$AB = AC$$

$\triangle ABD \cong \triangle ACE$ \therefore then we deduce that

$$AD = AE \quad (\text{Q.E.D.})$$

14 In $\triangle ABD$ and $\triangle ACE$:

$$\begin{cases} m(\angle D) = m(\angle E) = 90^\circ \\ m(\angle ABD) = m(\angle ACE) \\ BD = CE \end{cases}$$

$$BD = CE$$

$$BD = CE$$

$\triangle ABD \cong \triangle ACE$ \therefore then we deduce that

$$AB = AC$$

$$\therefore m(\angle ABC) = m(\angle ACB) \quad (\text{Q.E.D.})$$

15 In $\triangle ABC$: $\therefore AB = AC$

$\therefore \overline{AD}$ bisects $\angle A$

$$\overline{AD} \perp \overline{BC} \quad (\text{First req.})$$

D is the midpoint of \overline{BC}

$$\therefore CD = \frac{1}{2} BC = \frac{1}{2} \times 8 = 4 \text{ cm}$$

$$\therefore m(\angle BAD) = 180^\circ - (65^\circ + 90^\circ) = 25^\circ$$

$$m(\angle DAC) = m(\angle BAD) = 25^\circ \quad (\text{Second req.})$$

16 In $\triangle ADE$: $\therefore AD = AE$

$$m(\angle ADE) = m(\angle AED) \quad (1)$$

$\therefore \overline{DE} \parallel \overline{BC}$, \overline{AB} is a transversal to them

$$m(\angle ADE) = m(\angle B) \quad (\text{corresponding angles})$$

$$\quad (2)$$

$\therefore \overline{DE} \parallel \overline{BC}$, \overline{AC} is a transversal to them

$$m(\angle AED) = m(\angle C) \quad (\text{corresponding angles})$$

$$\quad (3)$$

From (1), (2) and (3) $\therefore m(\angle B) = m(\angle C)$

$\therefore AB = AC$

$\therefore \triangle ABC$ is an isosceles triangle (Q.E.D.)

17 In $\triangle ABC$: $\therefore AB = AC$

$\therefore \overline{AE}$ bisects $\angle BAC$

$$BE = \frac{1}{2} BC \quad (\text{Q.E.D. 1})$$

$\therefore \overline{AE} \perp \overline{BC}$

$\therefore \overline{AE}$ is the axis of symmetry of \overline{BC}

$\therefore D \in \overline{AE}$

$$BD = CD \quad (\text{Q.E.D. 2})$$

18 In $\triangle ABC$: $\therefore m(\angle B) = m(\angle C)$

$$AB = AC \quad 2x - 1 = 7$$

$$2x = 8 \quad \therefore x = 4 \quad (\text{First req.})$$

$$BC = 9 - 4 = 5 \text{ cm}$$

$$\therefore AB = AC = 7 \text{ cm}$$

$$\text{The perimeter of } \triangle ABC = 7 + 7 + 5 = 19 \text{ cm} \quad (\text{Second req.})$$

19 In $\triangle ABC$: $m(\angle B) = m(\angle C)$

$$\therefore AB = AC \quad \therefore 2x - 1 = x + 3$$

$$\therefore 2x - x = 3 + 1$$

$$x = 4 \quad AB = AC = 4 + 3 = 7 \text{ cm}$$

$$\therefore BC = 9 - 4 = 5 \text{ cm}$$

$$\text{The perimeter of } \triangle ABC = 7 + 7 + 5 = 19 \text{ cm} \quad (\text{The req.})$$

20 The sum of measures of the angles of the triangle $= 180^\circ$

$$2x + 3x - 10^\circ + x + 40^\circ = 180^\circ$$

$$6x + 30^\circ = 180^\circ$$

$$6x = 150^\circ \quad x = \frac{150^\circ}{6} = 25^\circ$$

$$m(\angle A) = 2 \times 25^\circ = 50^\circ$$

$$\therefore m(\angle B) = 25^\circ + 40^\circ = 65^\circ$$

$$\therefore m(\angle C) = 3 \times 25^\circ - 10^\circ = 65^\circ$$

$$m(\angle B) = m(\angle C)$$

$$\therefore AB = AC$$

$$\triangle ABC \text{ is an isosceles triangle} \quad (\text{Q.E.D.})$$

21 In $\triangle ABC$: $\therefore D$ is the midpoint of \overline{AC}

$\therefore \overline{BD}$ is a median from the vertex of the right angle

$$BD = \frac{1}{2} AC \quad (1)$$

In $\triangle BDE$: $\therefore m(\angle BDE) = 90^\circ$

$$\therefore m(\angle E) = 30^\circ \quad \therefore BD = \frac{1}{2} BE \quad (2)$$

$$\text{From (1) and (2) } \therefore AC = BE \quad (\text{Q.E.D.})$$

22 In $\triangle ADC$ and $\triangle BDC$:

$$\begin{cases} AC = BC \\ \overline{CD} \text{ is a common side} \\ m(\angle ACD) = m(\angle BCD) \end{cases}$$

$\triangle ADC \cong \triangle BDC$ and we deduce that

$$AD = BD$$

$$\therefore \overline{ED} = BD \quad \therefore AD = ED$$

$$\therefore m(\angle E) = m(\angle EAD) \quad (\text{Q.E.D.})$$

23 $\therefore m(\angle BAD) = 90^\circ$; $m(\angle BAE) = 30^\circ$

$$m(\angle DAF) = 60^\circ$$

In $\triangle AFD$

$$m(\angle AFD) = 90^\circ \therefore m(\angle DAF) = 60^\circ$$

$$\therefore m(\angle ADF) = 180^\circ - (90^\circ + 60^\circ) = 30^\circ$$

$$AD = 2 AF = 8 \text{ cm}$$

$$\text{The area of the square} = 8 \times 8 = 64 \text{ cm}^2$$

(The req.)

24 In $\triangle ABC$: $\therefore D$ is the midpoint of \overline{BC}

$\therefore \overline{AD}$ is a median

$$\therefore AM = 2 MD$$

M is the intersection point of the medians of $\triangle ABC$

$$\therefore M \in \overline{CE} \quad \therefore \overline{CE} \text{ is a median in } \triangle ABC$$

$$EM = \frac{1}{3} EC = \frac{1}{3} \times 12 = 4 \text{ cm.} \quad (\text{The req.})$$

| 11. d) | 12. b) | | | |

Second Answers of complete questions

- 1** opposite to a side greater in length than that opposite to the other angle

2 the angle of the greater measure

 3 \overline{AB}

 4 \overline{BC}

 5 $>$

 6 $[4, 14]$

7 the perpendicular line segment

8 the hypotenuse

 9 \overline{AC}

 10 $A + X$

Third Answers of essay questions

 1 In $\triangle ABC$

$$\therefore m(\angle C) = 180^\circ - (80^\circ + 40^\circ) = 60^\circ$$

$$\therefore m(\angle B) > m(\angle C) > m(\angle A)$$

$$AC > AB > BC \quad (\text{The req.})$$

 2 In $\triangle ABC$ $AB < BC < AC$

$$\therefore m(\angle C) < m(\angle A) < m(\angle B) \quad (\text{The req.})$$

 3 In $\triangle ABC : \because AC = AB$

$$\therefore m(\angle ACB) = m(\angle ABC) \quad (1)$$

$$\text{In } \triangle BCD : \because BD > CD$$

$$\therefore m(\angle BCD) > m(\angle CBD) \quad (2)$$

Adding (1) and (2) :

$$m(\angle ACD) > m(\angle ABD) \quad (\text{Q.E.D.})$$

4

 Const : Draw \overline{AC}

 Proof : In $\triangle ABC$

$$AB > BC$$

$$\therefore m(\angle BCA) > m(\angle BAC) \quad (1)$$

 In $\triangle ADC : \because AD > CD$

$$m(\angle DCA) > m(\angle DAC) \quad (2)$$

Adding (1) and (2)

$$m(\angle BCD) > m(\angle BAD) \quad (\text{Q.E.D.})$$

 5 In $\triangle ABC : \because AB < AC$

$$m(\angle ACB) < m(\angle ABC)$$

 $\therefore \overline{CM}$ bisects $\angle ACB$ & \overline{BM} bisects $\angle ABC$

$$\therefore m(\angle MCB) = \frac{1}{2} m(\angle ACB)$$

$$\therefore m(\angle MBC) = \frac{1}{2} m(\angle ABC)$$

$$m(\angle MCB) < m(\angle MBC)$$

$$BM < CM \quad (\text{Q.E.D.})$$

 6 In $\triangle ABC : \because AB > BC$

$$\therefore m(\angle ACB) > m(\angle BAC) \quad (1)$$

 $\therefore \overline{XY} \parallel \overline{BC} \text{ & } \overline{AC} \text{ is a transversal to them}$

$$\therefore m(\angle XYA) = m(\angle ACB) \quad (\text{corresponding angles}) \quad (2)$$

From (1) and (2)

$$m(\angle XYA) > m(\angle BAC)$$

$$AX > XY \quad (\text{Q.E.D.})$$

 7 $\therefore \overline{AD} \parallel \overline{BC} \text{ & } \overline{AB}$ is a transversal to them

$$m(\angle B) = m(\angle BAD) = 40^\circ \text{ (alternate angles)}$$

 In $\triangle ABC$

$$m(\angle C) = 180^\circ - (80^\circ + 40^\circ) = 60^\circ$$

$$\therefore m(\angle C) > m(\angle B)$$

$$\therefore AB > AC \quad (\text{Q.E.D.})$$

 8 In $\triangle AXY :$

$$\therefore m(\angle AXY) = m(\angle AYZ)$$

$$\therefore AY = AX \quad (1)$$

$$\therefore AC > AB \quad (2)$$

Subtracting (1) from (2)

$$\therefore AC - AY > AB - AX$$

$$\therefore YC > XB \quad (\text{Q.E.D.})$$

 9 In $\triangle ABC$ $AB = AC$

$$\therefore m(\angle ACB) = m(\angle B) = 65^\circ$$

$$\therefore m(\angle BAC) = 180^\circ - 65^\circ \times 2 = 50^\circ$$

 $\therefore \angle BAC$ is an exterior angle of $\triangle ACD$

$$m(\angle ADC) = 50^\circ - 20^\circ = 30^\circ$$

$$\text{In } \triangle ADC : m(\angle ADC) > m(\angle ACD)$$

$$\therefore AC > AD$$

$$\therefore AB = AC$$

$$\therefore AB > AD \quad (\text{Q.E.D.})$$

 10 In $\triangle ABD$ $BD = AD$

$$\therefore m(\angle BAD) = m(\angle B)$$

$$m(\angle BAD) + m(\angle DAC) > m(\angle B)$$

$$\therefore m(\angle BAC) > m(\angle B)$$

$$\therefore BC > AC \quad (\text{Q.E.D.})$$

Geometry

11 In $\triangle ABC$, $AB = AC$

$$\therefore m(\angle B) = m(\angle C) \quad (1)$$

$$D \in \overline{BC}$$

$\angle ADC$ is an exterior angle of $\triangle ADB$

$$\therefore m(\angle ADC) > m(\angle B) \quad (2)$$

From (1) and (2), $\therefore m(\angle ADC) > m(\angle C)$

$$AC > AD \quad (\text{Q.E.D.})$$

12 In $\triangle ABD$, X is the midpoint of AB

Y is the midpoint of AD

$$XY = \frac{1}{2} BD \quad (1)$$

In $\triangle DBC$, $m(\angle BDC) = 90^\circ$

E is the midpoint of \overline{BC}

\overline{DE} is a median from the vertex of the right angle

$$DE = \frac{1}{2} BC \quad (2)$$

BC is a hypotenuse of $\triangle BDC$

$$BD < BC$$

$$\therefore \frac{1}{2} BD < \frac{1}{2} BC \quad (3)$$

From (1), (2) and (3):

$$XY < DE \quad (\text{Q.E.D.})$$

13 $\angle ADC$ is an exterior angle of $\triangle ABD$

$$\therefore m(\angle ADC) > m(\angle BAD) \quad (1)$$

$\therefore \overline{AD}$ bisects $\angle BAC$

$$\therefore m(\angle BAD) = m(\angle DAC) \quad (2)$$

From (1) and (2)

$$\therefore m(\angle ADC) > m(\angle DAC)$$

$$\therefore AC > DC \quad (\text{Q.E.D.})$$

14 In $\triangle ACE$

$$\therefore AE = EC$$

$$\therefore m(\angle ECA) = m(\angle CAE) = 40^\circ$$

$$m(\angle AEC) = 180^\circ - 40^\circ - 40^\circ = 100^\circ$$

$$\therefore m(\angle AEC) > m(\angle ACE)$$

$$\therefore AC > AE \quad (\text{Q.E.D.})$$

In $\triangle ACD$:

$$\therefore \overline{AE} \text{ is a median, } AE = \frac{1}{2} CD$$

$$\therefore m(\angle DAC) = 90^\circ$$

\therefore In $\triangle ABC$, \overline{BC} is a hypotenuse

$$\therefore BC > AC \quad (\text{Q.E.D. 2})$$

$m(\angle ABC) = 60^\circ$

In $\triangle BCD$: $\because BD = CD$

$\therefore m(\angle CBD) = m(\angle BCD) = \frac{180^\circ - 60^\circ}{2} = 60^\circ$

$\therefore m(\angle ABD) = 60^\circ + 60^\circ = 120^\circ$ (The req.)

5

[a] In $\triangle BCD$: $\because BD = BC$

$\therefore m(\angle C) = m(\angle BDC) = 70^\circ$

$\therefore m(\angle CBD) = 180^\circ - 2 \times 70^\circ = 40^\circ$

$\therefore \overline{AD}$, \overline{BC} , \overline{BD} is a transversal

$\therefore m(\angle ADB) = m(\angle CBD) = 40^\circ$ (alternate angles)

\therefore In $\triangle ADB$

$m(\angle ABD) = 180^\circ - (100^\circ + 40^\circ) = 40^\circ$

$\therefore m(\angle ABD) = m(\angle ADB)$

$\therefore AB = AD$

$\therefore \triangle ABD$ is an isosceles triangle. (Q.E.D.)

[b] In $\triangle XYZ$: $\because XY + YL > XL$ (1)

In $\triangle XZL$: $\because ZL + XZ > XL$ (2)

Adding (1) & (2) : $XY + YL + ZL + XZ > 2 XL$

The perimeter of $\triangle XYZ > 2 XL$ (Q.E.D.)

12 Suez

1

[1] (b) [2] (a) [3] (a) [4] (c) [5] (c) [6] (a)

2

[1] greater than [2] the hypotenuse

[3] congruent [4] 60°

[5] bisects the base & is perpendicular to it

3

[a] $\because \overline{AD} \parallel \overline{BC}$, \overline{AC} is a transversal

$\therefore m(\angle C) = m(\angle DAC) = 40^\circ$ (alternate angles)

$m(\angle BAC) > m(\angle C)$

$\therefore BC > AB$ (Q.E.D.)

[b] In $\triangle ABC$: $\because AB > BC$

$\therefore m(\angle ACB) > m(\angle CAB)$ (1)

In $\triangle ACD$: $\because AD > DC$

$m(\angle ACD) > m(\angle CAD)$ (2)

Adding (1) & (2) :

$\therefore m(\angle BCD) > m(\angle BAD)$ (Q.E.D.)

4

[a] In $\triangle ABC$: $\because m(\angle ABC) = 90^\circ$, \overline{BD} is a median

$AC = 2 BD = 10$ cm. (First req.)

In $\triangle BDE$: $\because m(\angle BDE) = 90^\circ$, $m(\angle E) = 30^\circ$

$\therefore BE = 2 BD = 10$ cm. (Second req.)

[b] $\because D$ is the midpoint of \overline{AB}

$\therefore E$ is the midpoint of \overline{AC}

$BC = 2 DE = 12$ cm

$\therefore \overline{BE}$, \overline{CD} are two medians in $\triangle ABC$

M is the point of intersection of the medians

$CM = 2 MD = 8$ cm, $BM = 2 ME = 6$ cm

The perimeter of $\triangle MBC = 12 + 8 + 6 = 26$ cm
 (The req.)

5

[a] $\because \triangle BCD$ is an equilateral triangle

$m(\angle CBD) = 60^\circ$

In $\triangle ABD$: $\because AB = AD$

$\therefore m(\angle ABD) = m(\angle ADB) = \frac{180^\circ - 60^\circ}{2} = 60^\circ$

$m(\angle ABC) = 60^\circ + 60^\circ = 120^\circ$ (The req.)

[b] $\because m(\angle B) = m(\angle C) \therefore AB = AC$

$\therefore 2x - 1 = x + 3 \therefore x = 4$

$\therefore AB = AC = 2 \times 4 - 1 = 7$ cm

$\therefore BC = 9 - 4 = 5$ cm

The perimeter of $\triangle ABC = 7 + 7 + 5 = 19$ cm
 (The req.)

$$\therefore m(\angle ABD) = 90^\circ - 30^\circ = 60^\circ$$

In $\triangle ABD$,

$$m(\angle ADB) = 180^\circ - (60^\circ + 60^\circ) = 60^\circ$$

$$m(\angle A) = m(\angle ABD) = m(\angle ADB)$$

$\triangle ABD$ is an equilateral triangle (Q.E.D.)

[b] $\therefore AB = AC \quad \therefore A$ is the axis of \overline{BC}

$\therefore EB = EC \quad \therefore E$ is the axis of \overline{BC}

\overline{AE} is the axis of \overline{BC} (Q.E.D. 1)

$BD = DC$ (Q.E.D. 2)

Answer the following questions :

1 Choose the correct answer :

- 1 The multiplicative inverse of $\sqrt{3}$ is
 (a) $\sqrt{3}$ (b) $-\sqrt{3}$ (c) $\frac{\sqrt{3}}{3}$ (d) $\frac{3}{\sqrt{3}}$
- 2 The S.S. of the equation : $x^2 + 9 = 0$ in \mathbb{R} is
 (a) \emptyset (b) $\{3, -3\}$ (c) $\{3\}$ (d) $\{-3\}$
- 3 If $(k, 3)$ satisfies the relation : $y = 2x + 5$, then $k =$
 (a) 1 (b) -1 (c) 2 (d) 3
- 4 The volume of a cube is 27 cm^3 , then its lateral area = cm^2
 (a) 12 (b) 54 (c) 36 (d) 27
- 5 If $2x + 1 = 7$, then $3x =$
 (a) 6 (b) 9 (c) 12 (d) -12
- 6 The mean of the values : 3 , 2 , 4 , 7 is
 (a) 2 (b) 3 (c) 7 (d) 4

2 Complete :

- 1 $3a^2b \times \dots = 12a^4b^2$
- 2 If the mode of the values : 6 , 9 , $x - 2$, 10 is 6 , then $x =$
- 3 $[2, 7] - \{7\} =$
- 4 The slope of the straight line parallel to x -axis is
- 5 The median of : 24 , 20 , 11 , 36 , 40 is

- 3 [a]** If $x = \sqrt{3} + \sqrt{2}$, $y = \frac{1}{\sqrt{3} + \sqrt{2}}$, find the value of : $\frac{x+y}{xy}$

- [b]** If the slope of the straight line passing through the two points A (4 , k) , B (3 , 2) is 5 , find the value of k

4 [a] Find in \mathbb{R} the S.S. of the inequality :

$-1 \leq 2x + 3 < 5$ and represent the S.S. on the number line.

- [b]** Simplify : $\sqrt{50} + 2\sqrt{18} - \sqrt{32} - 8\sqrt{\frac{1}{2}}$

- 5 a) If the volume of a sphere is $\frac{500}{3} \pi \text{ cm}^3$, find the length of its diameter.

b) Find the mean of the following frequency distribution :

Sets	5 –	15 –	25 –	35 –	45 –	Total
Frequency	4	5	6	3	2	20

Answer the following questions :

1 Choose the correct answer :

1 $(\sqrt{5} + \sqrt{3})^2 (\sqrt{5} - \sqrt{3})^2 = \dots\dots\dots$

- (a) 2 (b) 3 (c) 4 (d) 8

2 The lower limit of a set is 4 and the upper limit is 8 , then its centre is

- (a) 8 (b) 6 (c) 4 (d) 2

3 $5 \in \dots\dots\dots$

- (a) $\{55\}$ (b) $]1, 5[$ (c) $]-\infty, 4]$ (d) $]-1, \infty[$

4 The mode of the values : 4 , 11 , 8 , 2 X is 8 , then X =

- (a) 2 (b) 4 (c) 9 (d) 11

5 If the volume of a cube is 27 cm^3 , then the perimeter of one of its faces is cm.

- (a) 12 (b) 9 (c) 15 (d) 40

6 If $(-1, 5)$ satisfies the equation : $3x + ky = 7$, then k =

- (a) 2 (b) 0.8 (c) 3 (d) 5

2 Complete :

1 If the volume of a sphere is $\frac{9}{2} \pi \text{ cm}^3$, then its radius length is

2 $(2x - 3)(3x + 5) = 6x^2 + \dots\dots\dots$

3 $[3, 4] - \{3, 5\} = \dots\dots\dots$

4 If A (1, -2) , B (5, -4) , then the slope of \overrightarrow{AB} is

5 The mean of the values : 7 , 11 , 21 , 10 and 16 is

3 a) Simplify to the simplest form :

1 $6\sqrt[3]{16} + \sqrt[3]{54} - 6\sqrt[3]{\frac{1}{4}}$

2 $5\sqrt{2}(2\sqrt{2} + \sqrt{12})$

b) If $x = \frac{4}{\sqrt{7} - \sqrt{3}}$, $y = \sqrt{7} - \sqrt{3}$

, prove that : x and y are conjugate numbers , then find the value of : $(x + y)^2$

Algebra and Statistics

- 4 [a]** Find the total area of a right circular cylinder of volume $72\pi \text{ cm}^3$ and height 8 cm.
(in terms of π)

[b] Find in \mathbb{R} the S.S. of :

- 1** $5 - 3x > 11$, then represent the solution set on the number line.
2 $8x^3 + 7 = 8$

- 5 [a]** Graph the relation : $y = 3x + 1$ and if $(2, a)$ satisfies the relation
 , find the value of a

[b] Find the arithmetic mean of the following frequency distribution :

Sets	10 –	20 –	30 –	40 –	50 –	Total
Frequency	4	6	8	7	5	30

Answer the following questions :

1 Choose the correct answer :

- 1** The slope of the straight line passing through $(4, 1)$, $(6, -3)$ is
(a) -1 (b) 0 (c) 2 (d) -2
- 2** The solution set of : $2x^3 + 54 = 0$ in \mathbb{R} is
(a) $\{3\}$ (b) $\{-3\}$ (c) $\{-3, 3\}$ (d) \emptyset
- 3** If $(6k, 4k)$ satisfies the relation : $x + y = 50$, then $k =$
(a) 0 (b) 10 (c) 15 (d) 5
- 4** If the order of the median of some values is tenth , then the number of these values is
(a) 19 (b) 20 (c) 21 (d) 22
- 5** If $2x = 14$, then $6x =$
(a) 12 (b) 28 (c) 36 (d) 42
- 6** $]-1, 3] \cup \{0, -1\} =$
(a) $]0, 3]$ (b) $]-1, 3[$ (c) $[-1, 3]$ (d) $[0, 3]$

2 Complete each of the following :

- 1** The volume of the sphere whose radius length equals 14 cm. is ($\pi \approx \frac{22}{7}$)
2 If the mode of the values : 16 , 18 , $x - 3$, 14 is 16 , then $x =$

- 3 The median of the values : 29 , 24 , 30 , 23 , 18 , 28 is
- 4 If the slope of a straight line equals zero , then the line is parallel to
- 5 If the lower limit of a set is 28 and the upper limit of it is 32 , then the centre of the set equals

3 [a] If $X =]-\infty, 4]$ and $Y =]2, \infty[$, find using the number line :

- 1 $X \cap Y$ 2 $X \cup Y$ 3 \bar{X}

[b] A right circular cylinder whose volume is 704 cm^3 and its diameter length is 8 cm. , then find its height. $(\pi \approx \frac{22}{7})$

4 [a] Find the solution set in \mathbb{R} of the inequality :

$-4 \leq 5x + 1 < 11$ and represent it on the number line.

[b] Simplify : $\sqrt[3]{54} + \sqrt[3]{50} + \sqrt[3]{16} + \sqrt[3]{8}$

5 [a] Graph the relation : $y = 2x + 2$

[b] Find the arithmetic mean of the following data :

Sets	20 -	22 -	24 -	26 -	Total
Frequency	16	12	14	8	50

Answer the following questions :

1 Choose the correct answer :

1 $2\sqrt{x} \times 3\sqrt{x} = \dots\dots\dots$ (where $x > 0$)

- (a) $6x^2$ (b) $6x$ (c) $5x^2$ (d) $5x$

2 If $(m, 2)$ satisfies the relation : $x + 2y = 7$, then $m = \dots\dots\dots$

- (a) -4 (b) -3 (c) 3 (d) 4

3 $(\sqrt{5} - 2) + (\sqrt{5} + 2) = \dots\dots\dots$

- (a) 1 (b) 2 (c) 4 (d) $2\sqrt{5}$

4 The volume of a cube is 27 cm^3 , then the area of one of its faces is .. cm^2

- (a) 3 (b) 6 (c) 9 (d) 12

5 If $a = \frac{2}{\sqrt{3}-1}$, $b = \sqrt{3}-1$, then $2ab = \dots\dots\dots$

- (a) 1 (b) 2 (c) 3 (d) 4

6 The arithmetic mean of the values : 7 , 4 , 9 , 10 , 11 , 16 , 13 is

- (a) 13 (b) 11 (c) 10 (d) 9

2 Complete the following :

- 1] Let $A(1, 3)$, $B(2, 5)$, then the slope of \overleftrightarrow{AB} equals
- 2] The S.S. of the equation : $(X+3)(X-1) = 0$ in \mathbb{R} is
- 3] The median of the values : 6, 7, 9, 10, 8, 5, 4 is
- 4] The mode of the values : 5, 6, 7, 6, 9, 5, 7, 5, 9, 4, 6, 9, 5 is
- 5] $[1, 5] - \{1, 5\} = \dots\dots\dots$

3 [a] If $X = [2, 8]$, $Y =]-3, 4[$, find each of the following using the number line :

- $$\boxed{1} X \cap Y \qquad \boxed{2} X \cup Y$$

[b] Find the S.S. of the inequality : $5x + 1 \geq 21$ in \mathbb{R} and represent the solution set on the number line.

4 [a] Find the value of : $\sqrt{20} + \sqrt{45} - \sqrt{80}$ (showing the steps of your answer)

[b] Find the volume of a right circular cylinder of height 10 cm. and its radius length is 7 cm.

5 [a] Represent graphically the relation : $y = 3 - x$

[b] Find the arithmetic mean of the following frequency distribution :

The set	0 –	10 –	20 –	30	40 –	Total
Frequency	4	5	6	3	2	20

Answer the following questions :

1 Choose the correct answer :

- 1** The S.S. of the equation : $X^2 + 5 = 0$ in \mathbb{R} is
- (a) 5 (b) $\{\sqrt{5}, -\sqrt{5}\}$ (c) $\{\sqrt{5}\}$ (d) \emptyset
- 2** If the point (a , 1) satisfies the relation : $X + y = 5$, then a =
- (a) -4 (b) 1 (c) 4 (d) 5
- 3** If four times a number is 48 , then third of this number is
- (a) 12 (b) 6 (c) 4 (d) 8
- 4** $[-1, 5] -]-1, 5[=$
- (a) \emptyset (b) $\{-1, 5\}$ (c) $[-1, 5]$ (d) $]-1, 5[$

5 The irrational number between 3 and 4 is

- (a) $\sqrt{17}$ (b) $\sqrt{6}$ (c) $\sqrt[3]{29}$ (d) 3.6

6 A cube the sum of its edge lengths is 48 cm. , then its volume is cm^3

- (a) 64 (b) 6 (c) 4 (d) 46

2 Complete :

1 If the lower limit of a set is 4 and its centre is 6 , then its upper limit is

2 If $\frac{1}{x} = \sqrt{5} - 2$, then $x = \dots\dots\dots$ (in its simplest form)

3 A sphere its diameter length is 6 cm. , then its volume is cm^3

4 If A (-1 , 4) , B (x , 2) and the slope of $\overrightarrow{AB} = -2$, then $x = \dots\dots\dots$

5 The S.S. of : $\sqrt{5}x \leq 5$ is in \mathbb{R}

3 [a] A right circular cylinder , its radius length equals its height and its volume is $216\pi \text{ cm}^3$
Find the height of the right cylinder.

[b] Find the S.S. in \mathbb{R} :

1 $5 > 2x - 3 > -1$ (represent it on the number line)

2 $(2x - 1)^3 = 125$

4 [a] If $X =]-\infty , 1]$ and $Y = [-2 , 4[$, find :

1 $X \cap Y$

2 $Y - X$

3 \bar{X}

[b] Simplify : $5\sqrt{8} + 2\sqrt[3]{2} - 2\sqrt{50} - \sqrt[3]{16}$

[c] If $x = \sqrt{7} + \sqrt{4}$, $y = \frac{3}{x}$

1 Prove that : x and y are two conjugate numbers.

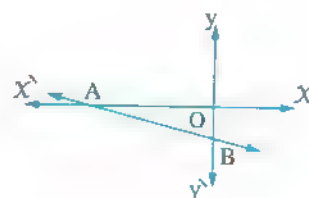

2 Find : $x^2 + 2xy + y^2$

5 [a] If the relation : $x + 4y = -4$ is represented in the opposite figure where A is the intersection point with x-axis and B is the intersection point with y-axis , then find :

1 The coordinates of A and B

2 The area of $\triangle ABO$ where O is the origin point.

3 The slope of \overrightarrow{AB}

[b] From the following frequency distribution :

Sets	5	15	25 -	35 -	45 -	Total
Frequency	7	10	12	13	k	50

1 Find k

2 Find the arithmetic mean.

Answer the following questions :

1 Choose the correct answer :

1 $\sqrt{4} \dots\dots\dots] - 2, \infty[$

- (a) \in (b) \notin (c) \subset (d) $\not\subset$

2 $\sqrt{\frac{x}{y}} = \dots\dots\dots$ (where $y > 0$)

- (a) $\frac{1}{y} \sqrt{x}$ (b) $\frac{1}{x} \sqrt{y}$ (c) $\frac{1}{y} \sqrt{xy}$ (d) $\frac{x}{y}$

3 The order of the median of the values : 4 , 5 , 6 , 7 and 8 is the

- (a) third. (b) fourth. (c) fifth. (d) sixth.

4 If $x = (-2)^4$, $y = -2^4$, then

- (a) $x = y$ (b) $x > y$ (c) $x < y$ (d) $x \leq y$

5 If $(2k, k)$ satisfies the relation : $y + 2x = 5$, then $k = \dots\dots\dots$

- (a) 5 (b) 4 (c) 2 (d) 1

6 If the mean of the values : 9 , 5 , 6 , x , 14 is 7 , then $x = \dots\dots\dots$

- (a) 3 (b) 2 (c) 1 (d) 5

2 Complete :

1 The additive inverse of the number $-5 + \sqrt{3}$ is

2 If the mode of the values : 4 , 11 , 8 , $2x$ is 4 , then $x = \dots\dots\dots$

3 The cube whose volume is 8 cm^3 , then the sum of all edge lengths is cm.

4 If the lower limit of a set is 4 and the upper limit is 8 , then its centre is

5 The straight line which represents the relation : $2x + 7y = 14$ intersects x -axis at the point (..... ,)

3 [a] If $x = \sqrt{7} - \sqrt{6}$, $y = \frac{1}{x}$, prove that : $(x + y)^2 = 28$

[b] If $A(3, 4)$, $B(5, a)$ and the slope of $\overrightarrow{AB} = 3$, find the value of a

[c] Find the lateral area of a right circular cylinder of volume $72\pi \text{ cm}^3$ and height 8 cm.

4 [a] Graph the relation : $y = 2 - x$

[b] Simplify : 1 $\sqrt{32} - 6\sqrt{\frac{1}{2}}$ 2 $\sqrt[3]{128} + \sqrt[3]{16}$

[c] If $X =] - \infty, 2[$ and $Y = [-1, 5]$, find using the number line :

- 1 $X \cap Y$ 2 $X \cup Y$ 3 \bar{X}

5 [a] Complete : The S.S. of the equation : $x^2 + 1 = 0$ in \mathbb{R} is

[b] Find in \mathbb{R} the S.S. of the inequality :

$5 - 3x > 11$, then represent the S.S. on the number line.

[c] Find the mean of the following data :

Sets	5	15 -	25 -	35	45	Total
Frequency	4	5	6	3	2	20

Answer the following questions :

1 Choose the correct answer :

[1] The mode for the values : 3 , 5 , 3 , 4 , 3 is

- (a) 3 (b) 4 (c) 5 (d) 12

[2] Let A (3 , 5) and B (5 , -1) , then the slope of \overleftrightarrow{AB} =

- (a) $-\frac{1}{3}$ (b) -3 (c) 3 (d) $\frac{1}{3}$

[3] If the point (a , 1) satisfies the relation : $x + y = 5$, then a =

- (a) 1 (b) -4 (c) 4 (d) 5

[4] The solution set of the equation : $x^2 + 9 = 0$ in \mathbb{R} is

- (a) \emptyset (b) $\{-3\}$ (c) $\{3\}$ (d) $\{3, -3\}$

[5] $4.274 \approx$ (to the nearest $\frac{1}{10}$)

- (a) 4 (b) 4.2 (c) 4.3 (d) 4.27

[6] The lower limit of a set is 4 and the upper limit is 8 , then its centre is

- (a) 2 (b) 4 (c) 6 (d) 8

2 Complete the following :

[1] The surface area of a sphere of diameter length 14 cm. equals

[2] $(\sqrt{8} + \sqrt{2})(\sqrt{8} - \sqrt{2}) =$

[3] The conjugate of the number $\frac{2\sqrt{5} - 3\sqrt{2}}{\sqrt{2}}$ is

[4] A cube whose volume is 8 cm^3 , then the sum of lengths of all its edges equals

[5] The S.S. of the equation : $x(x^3 - 1) = 0$ in \mathbb{R} is

3 [a] Find in the simplest form : $6\sqrt{\frac{1}{2}} + \frac{1}{3}\sqrt[3]{54} - \sqrt{18} - \sqrt[3]{2}$

[b] If $x = \sqrt{5} + \sqrt{2}$ and $y = \sqrt{5} - \sqrt{2}$, find the value of : $\frac{x+y}{xy-1}$

4 [a] Find the S.S. in \mathbb{R} of the inequality : $2x + 1 \leq 7$, then represent it on the number line.

[b] Find the volume of the sphere whose diameter length is 4.2 cm. ($\pi = \frac{22}{7}$)

5 [a] If the slope of \overleftrightarrow{AB} is 3 where $A = (3, 4)$, $B = (4, y)$, find the value of y

[b] Find the arithmetic mean of the following distribution :

Sets	4 -	8 -	12 -	16	20 -	Total
Frequency	2	4	8	6	4	24

Answer the following questions :

1 Choose the correct answer :

1 The solution set of the equation : $x + 5 = 5$ in \mathbb{N} is

(a) $\{0\}$ (b) $\{10\}$ (c) $\{-10\}$ (d) \emptyset

2 The rational number that lies between 0.2 , 0.3 is

(a) 0.21 (b) 0.11 (c) 0.31 (d) 0.33

3 $\sqrt[3]{x^6} = \sqrt{\dots\dots\dots}$

(a) x^3 (b) x^2 (c) x (d) x^4

4 If $(2, -5)$ satisfies the relation : $3x - y + c = 0$, then $c = \dots\dots\dots$

(a) 1 (b) -1 (c) 11 (d) -11

5 If the arithmetic mean of the set of values : 18 , 23 , 29 , $2k - 1$, k is 18 , then $k = \dots\dots\dots$

(a) 1 (b) 7 (c) 29 (d) 19

6 The median of the values : 34 , 23 , 25 , 40 , 22 , 4 is

(a) 22 (b) 23 (c) 24 (d) 25

2 Complete :

1 $0.3 = \dots\dots\dots$ (in the form of $\frac{a}{b}$)

2 $\sqrt[3]{343} = \dots\dots\dots$

3 The slope of any line parallel to X-axis is

- 4] The mode is the common value in the set.
- 5] If the order of the median of some values is the fourth , then the number of the values is

3 [a] Find the solution set of : $5x - 3 < 2x + 9$ in \mathbb{R}

[b] Find the value of : $\sqrt{18} + \sqrt{54} - 3\sqrt{2} - \frac{1}{2}\sqrt{24}$

4 [a] The radius length of the base of a right circular cylinder is 4 cm. and its height is 9 cm.
Find the volume in terms of π

[b] If A (2 , - 1) , B (10 , 3) and C (2 , 3) , find the slope of each of \overrightarrow{AB} and \overrightarrow{BC}

5 [a] Find : $[-1, 4] - [-3, 2]$ by using the number line.

[b] The following table shows the frequency distribution for the score of 50 students in an examination :

Sets	2 -	6 -	10 -	14	18 -	22 -	26	Total
Frequency	3	5	9	10	12	7	4	50

Find the mean of the students score.

9 El-Monofia Governorate

Answer the following questions :

1 Choose the correct answer :

1] The degree of the algebraic term $2x^3y^2$ is the

- (a) second. (b) third. (c) fourth. (d) fifth.

2] If the radius length of a sphere is 6 cm. , then its volume is cm^3

- (a) 6π (b) 36π (c) 72π (d) 288π

3] If x is a negative number , then the number is positive.

- (a) x^2 (b) x^3 (c) $2x$ (d) $\frac{1}{2}x$

4] $\sqrt{8} - 2\sqrt{2} = \dots\dots\dots$

- (a) 4 (b) 8 (c) zero (d) 2

5] If $|x| = 7$, then $x = \dots\dots\dots$

- (a) 7 (b) -7 (c) ± 7 (d) 8

6] The arithmetic mean for five values is 13 , then the sum of these values is

- (a) 70 (b) 56 (c) 65 (d) 13

2 Complete :

- 1 The slope of the straight line parallel to X-axis is
- 2 If the mode of the values : 18 , 11 , 4 , 2 X is 18 , then X =
- 3 If (k , 2) represents the relation : $X + 2y = 5$, then k =
- 4 If the order of the median of some values is the seventh , then the number of these values is
- 5 The median of : a + 2 , a , a - 2 , a - 1 , a + 1 is

3 [a] Simplify : $\sqrt[3]{75} - 6\sqrt{\frac{1}{3}} - 3\sqrt{12}$

[b] If $A = [-2, 3]$, $B = [1, \infty[$, find using the number line :

1 $A \cap B$

2 $A \cup B$

[c] The diameter length of a cylinder is 7 cm. and its height is 10 cm. Find the lateral area of the cylinder.

4 [a] Represent the relation : $2X + y = 4$, then find the slope of the straight line representing this relation.

[b] If $X = \frac{1}{\sqrt{7} + \sqrt{6}}$, $y = \sqrt{7} + \sqrt{6}$, prove that : X and y are two conjugate numbers , then find : $(X + y)^2$ in the simplest form.

5 [a] Find the S.S. in \mathbb{R} for the inequality :

$\sqrt[3]{-8} \leq X + 1 \leq \sqrt{9}$, then represent it on the number line.

[b] From the following frequency distribution :

The set	10 -	20 -	30 -	40 -	50 -	Total
Frequency	10	20	25	k	15	100

Find : 1 The value of k

2 The arithmetic mean.

10 El-Gharbia Governorate

Central Mathematics Supervision
Official Language Schools

Answer the following questions :

1 Choose the correct answer :

1 The S.S. in \mathbb{R} for the equation : $X^3 + 27 = 0$ is

(a) $\{-3\}$

(b) $\{2\}$

(c) $\{3\}$

(d) \emptyset

- 2 If the mode of the values : 3 , 6 , $x + 1$, 6 , 3 , 1 is 6 , then $x = \dots\dots\dots$
 (a) 1 (b) 2 (c) 5 (d) 0
- 3 The cube whose volume is 64 cm^3 , the length of one of its edges is $\dots\dots\dots$ cm.
 (a) 8 (b) 3 (c) 16 (d) 4
- 4 If $x < \sqrt{51} < x + 1$, $x \in \mathbb{Z}$, then $x = \dots\dots\dots$
 (a) 8 (b) 7 (c) 6 (d) 5
- 5 $\sqrt{7} + \sqrt{7} = \dots\dots\dots$
 (a) $\sqrt{28}$ (b) 7 (c) 14 (d) $\sqrt{14}$
- 6 If the point (a , 1) satisfies the relation $x + y = 5$, then a = $\dots\dots\dots$
 (a) 1 (b) 2 (c) 5 (d) 4

2 Complete :

- 1 $\sqrt[3]{\dots\dots\dots} = -\sqrt{4}$
- 2 If the order of the median of some values is seventh , then the number of these values is $\dots\dots\dots$
- 3 If the lower limit of a set is 8 and the upper limit of the same set is 10 , then the centre of this set is $\dots\dots\dots$
- 4 $[-3, 6] \cap [3, 9] = \dots\dots\dots$
- 5 The slope of x -axis is $\dots\dots\dots$

3 [a] Reduce to the simplest form : $\frac{\sqrt{3}}{\sqrt{5}-\sqrt{3}} + \frac{\sqrt{5}}{\sqrt{5}+\sqrt{3}}$

[b] Prove that : $\sqrt[3]{128} + \sqrt[3]{16} - 2\sqrt[3]{54} = 0$

[c] Find in \mathbb{R} the solution set of the inequality : $-3 < 4x - 7 < 5$

- 4 [a] A right circular cylinder whose height is 10 cm. and its volume is $90\pi \text{ cm}^3$
 Find the length of the radius of its base.

- [b] If $X = [-3, 4]$, $Y =]1, \infty[$, find each of the following using the number line :

1 $X \cap Y$

2 $X \cup Y$

3 $X - Y$

5 [a] Simplify : $\sqrt{50} + \sqrt{18} - \sqrt{32}$

- [b] Find the arithmetic mean of the following frequency distribution :

Sets	5 -	15 -	25 -	35 -	45 -	Total
Frequency	4	5	6	3	2	20

Answer the following questions :

1 Choose the correct answer from those given :

1 $[3, 5] -]3, 5[= \dots\dots\dots$

- (a) \emptyset (b) $[3, 5]$ (c) $]3, 5[$ (d) $\{3, 5\}$

2 If the point $(a, 1)$ satisfies the relation : $x + y = 5$, then $a = \dots\dots\dots$

- (a) -4 (b) 1 (c) 4 (d) 5

3 If the lower limit of a set is 4 and the upper limit is 8 , then its centre is $\dots\dots\dots$

- (a) 2 (b) 4 (c) 6 (d) 8

4 If the radius length of a sphere is 6 cm. , then its volume is $\dots\dots\dots \text{cm}^3$

- (a) 6π (b) 36π (c) 72π (d) 288π

5 $\sqrt{100 - 36} = 10 - \dots\dots\dots$

- (a) -6 (b) 2 (c) 4 (d) 6

6 The intersection point of the ascending and descending cumulative curves determines the $\dots\dots\dots$ on the sets axis.

- (a) order of the median (b) median
(c) mean (d) mode

2 Complete each of the following :

1 $\sqrt{3}, \sqrt{12}, \sqrt{27}, \sqrt{48}, \dots\dots\dots$ (in the same pattern)

2 The slope of any straight line parallel to x -axis is $\dots\dots\dots$

3 If $n \in \mathbb{Z}_+$, $n < \sqrt{26} < n + 1$, then $n = \dots\dots\dots$

4 The arithmetic mean of the set of values : $3 - x, 5 + x, 4$ equals $\dots\dots\dots$

5 If the mode of the values : $4, 11, 8, 2, x$ is 4 , then $x = \dots\dots\dots$

3 [a] Find the slope of \overleftrightarrow{AB} where $A(-1, 3)$ and $B(2, 5)$, is the point $C(8, 1) \in \overleftrightarrow{AB}$?

[b] If $x = \sqrt{7} + \sqrt{5}$, $xy = 2$, find the value of : $\frac{x+y}{xy}$

4 [a] Find the S.S. of the inequality : $-2 \leq 3x + 7 < 10$ in \mathbb{R} , then represent the interval of solution on the number line.

[b] Find the height of a right circular cylinder whose height is equal to its base radius length and its volume is $72\pi \text{ cm}^3$.

5 [a] Simplify to the simplest form : $\sqrt[3]{18} + \sqrt[3]{54} - 3\sqrt[3]{2} = \frac{1}{2}\sqrt[3]{16}$

[b] Find the arithmetic mean of the following frequency distribution :

Sets	5 –	15 –	25 –	35 –	45 –	Total
Frequency	4	5	6	3	2	20

12 Ismailia Governorate

Ministry of Education
Ismailia Governorate

Answer the following questions :

1 Choose the correct answer :

1 The slope of y-axis is

- (a) 0 (b) $\frac{1}{2}$ (c) undefined. (d) - 1

2 The mean of 8 , 19 , 11 , 12 , 10 is

- (a) 12 (b) 15 (c) 20 (d) 11

3 The multiplicative inverse of $\frac{\sqrt{6}}{2}$ is

- (a) $-\frac{\sqrt{6}}{2}$ (b) $\frac{\sqrt{6}}{3}$ (c) $\frac{\sqrt{6}}{2}$ (d) $2\sqrt{6}$

4 If the age of Ali now is X years , then his age after 12 years is years.

- (a) $X + 12$ (b) $X - 12$ (c) $X + 15$ (d) $12 X$

5 $\sqrt[3]{125} = \sqrt{\dots}$

- (a) 5 (b) 100 (c) 10 (d) 25

6 If the mode of : 7 , 10 , k + 3 , 9 is 7 , then k =

- (a) 3 (b) 10 (c) 4 (d) 9

2 Complete :

1 $4a^5 \times 5a^2 = \dots$

2 The median of : 15 , 7 , 16 , 9 , 4 , 20 is

3 $\{2, 7\} - \{2, 7\} = \dots$

4 If (3 , k) satisfies the relation : $2x + y = 10$, then k =

5 $\{1, 2, 3\} \cap \{2, 4, 5\} = \dots$

3 [a] The area of a sphere is 616 cm^2 . Find its diameter length $\left(\pi = \frac{22}{7}\right)$

[b] Graph the relation : $y = 2x$

[c] Find the slope of \overrightarrow{AB} where A (- 1 , 5) , B (2 , 6)

4 [a] Simplify : $\sqrt{72} + 2\sqrt{32} - 3\sqrt{2}$

[b] Find the S.S. in \mathbb{R} and represent it on the number line of : $1 < 3 - 2x \leq 11$

5 [a] If $A = [-2, 3]$, $B =]0, 5[$, using the number line find :

1 $A \cup B$

2 $A \cap B$

3 $A - B$

[b] From the following frequency distribution :

Sets	10 -	20 -	30 -	40 -	50 -	Total
Frequency	7	10	8	6	9	40

Find the mean.

Kafr El-Sheikh Governorate

Math Supervision

Answer the following questions :

1 Choose the correct answer :

1 The S.S. of the equation : $x(x^2 + 4) = 0$ in \mathbb{R} is

(a) $\{4\}$

(b) $\{0\}$

(c) $\{4, 0\}$

(d) $\{4, -4\}$

2 The slope of the straight line which is perpendicular to X-axis is

(a) 1

(b) zero

(c) -1

(d) undefined.

3 If the arithmetic mean of the numbers : 5, 4, $x-3$, 6, 4 is 4, then $x =$

(a) 5

(b) 4

(c) 6

(d) 3

4 If the mode of the numbers : 5, 2, 4, $x-2$ is 5, then $x =$

(a) 4

(b) 6

(c) 7

(d) 5

5 If $-2x < 6$, then $x \dots$

(a) < 6

(b) > -3

(c) > 6

(d) > -6

6 $\mathbb{Z} \cap \mathbb{N} =$

(a) $\{0\}$

(b) \mathbb{Z}_+

(c) \mathbb{N}

(d) \mathbb{Q}

2 Complete the following :

1 The multiplicative inverse of the number $\sqrt{10} - 3$ is ...

2 $[3, 5] -]3, 5[=$

3 The median of the numbers : 41, 19, 15, 30, 20 is

4 $\sqrt{18} - \sqrt{2} =$

5 If the slope of the straight line passing through $(2, k)$, $(3, -1)$ is 2, then $k =$...

3 [a] Find the lateral area of the right circular cylinder of volume $150\pi \text{ cm}^3$ and height 6 cm.

[b] Find in the simplest form : $3\sqrt{2} + \sqrt{8} - \sqrt{18}$

4 [a] Find in \mathbb{R} the S.S. of the inequality : $x < 2x - 1 < x + 3$

[b] If $x = \sqrt{7} - \sqrt{5}$, $y = \frac{2}{x}$, find : $\frac{x+y}{xy}$ in the simplest form.

5 [a] If $(-1, 5)$ satisfies the relation : $3x + ky = 7$, then find k

[b] The following table shows the frequency of marks of 50 students :

Sets	2	6	10	14	ℓ	22	26	Total
Frequency	3	6	8	10	11	k	4	50

Find : 1 The value of each of ℓ and k

2 The arithmetic mean for the marks of students.

11 Souhag Governorate

Ministry of Education, Government of Lebanon
Lebanese Education System

Answer the following questions :

1 Choose the correct answer :

1) The simplest form of $(\sqrt{3} - \sqrt{2})(\sqrt{3} + \sqrt{2})$ is

(a) $\sqrt{3}$ (b) 1 (c) $\sqrt{2}$ (d) $\sqrt[3]{3}$

2 The volume of a cube is 64 cm^3 , then its edge length is ... cm.

(a) 4 (b) 8 (c) 16 (d) 64

3 The mean of the values : 34, 23, 25, 40, 22, 12 is

(a) 22 (b) 23 (c) 24 (d) 26

4 If the point $(k, 1)$ satisfies the relation : $x + y = 5$, then $k =$

(a) 1 (b) -4 (c) 4 (d) 5

5 $(2\sqrt[3]{2})^3 =$

(a) 4 (b) 8 (c) 16 (d) 40

6 If the mode of the values : 4, 11, 8, 2x is 4, then $x =$

(a) 2 (b) 4 (c) 6 (d) 8

2 Complete :

1 The S.S. of : $x^2 + 9 = 0$ in \mathbb{R} is

2 $\sqrt{8} + \sqrt{18} - 3\sqrt{2} =$

Algebra and Statistics

3 The mode of : 3 , 5 , 3 , 4 , 3 is

4 $]-2, 2[\cup \{-2, 2\} = \dots\dots\dots$

5 If the volume of a sphere = $\frac{9}{2} \pi \text{ cm}^3$, then its diameter length equals cm.

3 [a] Find in the simplest form : $\sqrt{18} + \sqrt{32} - 3\sqrt{2} - \frac{1}{2}\sqrt{8}$

[b] If $x = \sqrt{5} - \sqrt{2}$, $y = \frac{3}{\sqrt{5} - \sqrt{2}}$, prove that : x and y are two conjugate numbers.

4 [a] Represent graphically the linear relation : $y = 2 - x$

[b] Find the solution set of the inequality :

$-2 < 3x + 7 \leq 10$ in \mathbb{R} , then represent the S.S. on the number line.

5 [a] A right circular cylinder of radius length 4 cm. and its height is 9 cm.

Find its volume in terms of π

[b] Find the arithmetic mean of the following frequency distribution :

Sets	5 -	15 -	25 -	35 -	45 -	Total
Frequency	7	10	12	13	8	50

Aswan Governorate

Aswan Educational Directorate

Aswan Governorate

Answer the following questions :

1 Choose the correct answer :

1 The multiplicative inverse of $\frac{\sqrt{3}}{5}$ is

(a) $-\frac{\sqrt{3}}{5}$

(b) $\frac{5}{3}$

(c) $\frac{3}{5}$

(d) $\frac{5\sqrt{3}}{3}$

2 If $x = \sqrt{6} - \sqrt{2}$, $y = \frac{4}{x}$, then $y = \dots\dots\dots$

(a) 4

(b) $\sqrt{6} + \sqrt{2}$

(c) 10

(d) $\sqrt{8}$

3 If the ordered pair $(2k, k)$ satisfies the relation : $y + 2x = 5$, then $k = \dots\dots\dots$

(a) 1

(b) 2

(c) 3

(d) 4

4 If the lower boundary of a set is 4 and the upper boundary is 8, then its centre is

(a) 2

(b) 4

(c) 6

(d) 8

5 $[1, 5] - \{1, 5\} = \dots\dots\dots$

(a) $[2, 4]$

(b) $]1, 5[$

(c) $]0, \infty[$

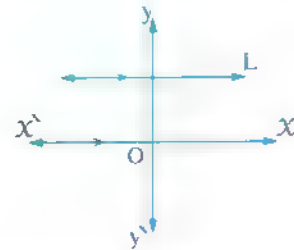

(d) $]1, 5]$

6 In the opposite figure :

The slope of the straight line

L is _____

- (a) positive. (b) negative.
(c) zero. (d) undefined.

2 Complete each of the following :

1 $\sqrt[3]{64} = \sqrt{\quad}$

2 In the relation : $y = 3x + 4$, if $y = 1$, then $x = \dots\dots\dots$

3 If the mode of the values : 12 , 7 , $x + 1$, 7 , 12 is 7 , then $x = \dots\dots\dots$

4 $[-2, 5[\cap \mathbb{R}_+ = \dots\dots\dots$

5 The median of the set of values : 34 , 23 , 25 , 40 , 22 , 4 is $\dots\dots\dots$

3 [a] Find in the simplest form the value of : $\sqrt[3]{128} + \sqrt[3]{16} + 2\sqrt[3]{-54}$

[b] If $x = \sqrt{3} + 1$ and $y = \frac{2}{\sqrt{3} + 1}$

1 Prove that : x and y are conjugate.

2 Find the value of : $\frac{x+y}{xy}$ in the simplest form.

4 [a] If $X =]-1, 4]$ and $Y = [3, \infty[$, using the number line find each of the following :

1 $X \cup Y$

2 $X - Y$

3 $X \cap Y$

[b] Find the S.S. in \mathbb{R} of : $-2 \leq 3x + 7 \leq 10$ and represent it on the number line.

5 [a] Represent graphically the relation $y = 2 - x$ and if $(-4, b)$ satisfies the relation , find the value of b

[b] Find the arithmetic mean of the following frequency distribution :

Sets of marks	5	15 -	25 -	35 -	45 -	Total
Number of pupils	7	10	12	13	8	50

Answer the following questions :

1 Choose the correct answer :

1] In the opposite figure :

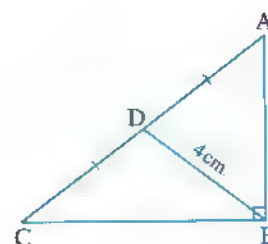

$AC = \dots\dots\dots$ cm.

(a) 4

(b) 6

(c) 8

(d) 2

2] If ΔABC is right-angled at A and $AB = AC$, then $m(\angle B) = \dots\dots\dots$

(a) 30°

(b) 45°

(c) 60°

(d) 90°

3] In ΔABC , if $AB = 6$ cm. , $AC = 7$ cm. , then $BC \in \dots\dots\dots$

(a) $]6, 13]$

(b) $[6, 7]$

(c) $]1, 13[$

(d) $[1, 7[$

4. In ΔXYZ , if $XY < XZ$, then $\dots\dots\dots$

(a) $m(\angle Y) \leq m(\angle Z)$

(b) $m(\angle Y) > m(\angle Z)$

(c) $m(\angle Y) = m(\angle Z)$

(d) $m(\angle Z) > m(\angle Y)$

5 If ΔABC is right-angled at B , $m(\angle A) = 55^\circ$, then the number of axes of symmetry of ΔABC equals $\dots\dots\dots$

(a) 1

(b) 2

(c) 3

(d) zero

6 The triangle in which the measures of two angles of it are 42° and 69° is $\dots\dots\dots$ triangle.

(a) an isosceles

(b) an equilateral

(c) a scalene

(d) a right-angled

2 Complete the following :

1 Any point on the axis of symmetry of a line segment is $\dots\dots\dots$ from its terminals.

2] The longest side in the right-angled triangle is $\dots\dots\dots$

3 The point of intersection of the medians of the triangle divides each of them by the ratio $\dots\dots\dots$; $\dots\dots\dots$ from the vertex.

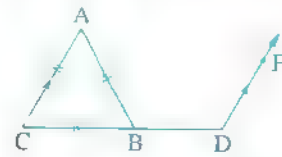

4 The measure of any exterior angle of an equilateral triangle equals $\dots\dots\dots^\circ$

5] The sum of the lengths of any two sides in a triangle is $\dots\dots\dots$ the length of the third side.

3 [a] In the opposite figure :

$\triangle ABC$ is an equilateral triangle , $\overrightarrow{DF} \parallel \overrightarrow{AC}$

Find by proof : $m(\angle D)$

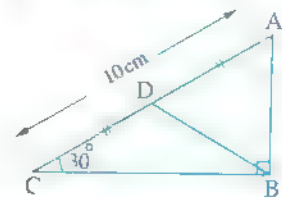

[b] In the opposite figure :

$m(\angle ABC) = 90^\circ$, $m(\angle C) = 30^\circ$

, $AC = 10$ cm. , $AD = DC$

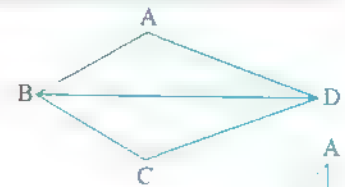

Find : The perimeter of $\triangle ABD$

4 [a] In the opposite figure :

$AB < AD$, $BC < CD$

Prove that : $m(\angle ABC) > m(\angle ADC)$

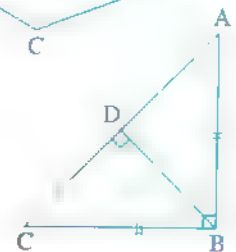

[b] In the opposite figure :

$m(\angle ABC) = 90^\circ$, $\overline{BD} \perp \overline{AC}$

, $AB = BC$

Prove that : $\triangle DCB$ is an isosceles triangle.

5 [a] XYZ is a triangle in which $m(\angle X) = 60^\circ$, $m(\angle Y) = 50^\circ$

Order the lengths of the sides of the triangle descendingly.

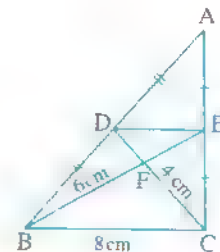

[b] In the opposite figure :

ABC is a triangle in which D , E are the midpoints of \overline{AB} , \overline{AC}

, $FC = 4$ cm. , $FB = 6$ cm.

, $BC = 8$ cm.

Find : The perimeter of $\triangle DFE$

Answer the following questions :

1 Choose the correct answer from those given :

- 1 A triangle has one line of symmetry , the lengths of two sides are 4 cm. and 8 cm. , then the length of the third side is cm.

(a) 3 (b) 4 (c) 8 (d) 6

- 2 The point of intersection of the medians of the triangle divides each median in the ratio of from the base.

(a) 2 : 1 (b) 2 : 3 (c) 1 : 2 (d) 1 : 3

Geometry

- 3 If $m(\angle A) = 50^\circ$, then the measure of its reflex angle is
- (a) 40° (b) 130° (c) 310° (d) 180°
- 4 If the length of the side of an equilateral triangle is 10 cm., then the length of its height is cm.
- (a) 10 (b) 5 (c) $5\sqrt{3}$ (d) 6
- 5 In $\triangle ABC$, if $AB = 6$ cm., $AC = 7$ cm., then the length of $\overline{BC} \in$
- (a) $[6, 7]$ (b) $]1, 7[$ (c) $[1, 13]$ (d) $]1, 13[$
- 6 In the opposite figure :
- $x + y =$
- (a) 180° (b) 360°
(c) 240° (d) 280°

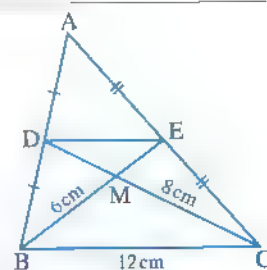

2 Complete :

- 1 If the measures of two angles in a triangle are different, then the greater angle in measure of them is
- 2 In the triangle ABC, if $m(\angle A) = 50^\circ$, $m(\angle B) = 60^\circ$, then the longest side is
- 3 The median drawn from the vertex angle of an isosceles triangle and
- 4 In $\triangle ABC$, if $m(\angle A) = 30^\circ$, $m(\angle B) = 90^\circ$, then $AC =$ BC
- 5 The perpendicular bisector of a line segment is called

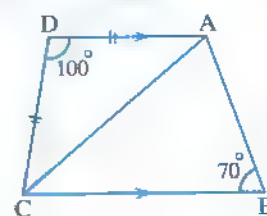

3 [a] In the opposite figure :

In $\triangle ABC$: \overline{BE} , \overline{CD} are two medians, $MB = 6$ cm.,
 $BC = 12$ cm., $MC = 8$ cm.
 Find : The perimeter of $\triangle MDE$

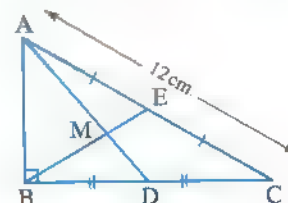

[b] In the opposite figure :

$\overline{AD} \parallel \overline{BC}$, $AD = DC$
 $m(\angle D) = 100^\circ$, $m(\angle B) = 70^\circ$
 Prove that : 1 $AC > AB$ 2 $\triangle ABC$ is isosceles.

4 [a] In the opposite figure :

$\triangle ABC$ is right-angled at B
 E and D are the midpoints of \overline{AC} , \overline{BC} respectively
 $AC = 12$ cm.
 Find : The length of each of \overline{BE} , \overline{ME}

Geometry

6. ABCD is a rectangle, M is the point of intersection of its diagonals, if the length of the diagonal is 6 cm., then the length of the median \overline{AM} is cm.

(a) 3 (b) 6 (c) 9 (d) 12

2 Complete each of the following :

1. The length of the side which is opposite to the angle of measure 30° in the right-angled triangle equals the length of the hypotenuse.
2. In the right-angled triangle, the longest side is the
3. The straight line drawn from the vertex of the isosceles triangle, perpendicular to the base this vertex.
4. The measure of the exterior angle of the equilateral triangle equals $^\circ$
5. The number of axes of symmetry of the isosceles triangle is

3 [a] In the opposite figure :

ABC is a triangle, $AB = AC$, $m(\angle B) = (X + 5)^\circ$

, $m(\angle C) = (2X - 15)^\circ$

Find : $m(\angle A)$ (show all of your work)

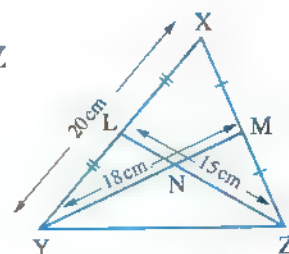

[b] In the opposite figure :

N is the point of concurrence of the medians of the triangle XYZ

, $LZ = 15$ cm., $YM = 18$ cm.

, $XY = 20$ cm.

Find : The perimeter of the triangle NLY

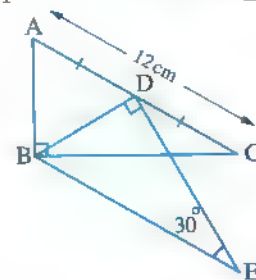

[c] In the opposite figure :

$m(\angle ABC) = m(\angle BDE) = 90^\circ$

, D is the midpoint of \overline{AC}

, $m(\angle E) = 30^\circ$, $AC = 12$ cm.

Find with proof : The length of \overline{BE}

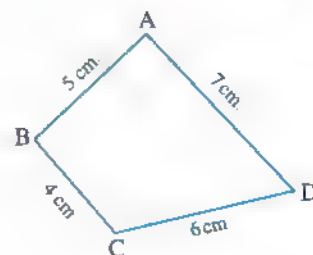

4 [a] In the opposite figure :

ABCD is a quadrilateral in which :

$AB = 5$ cm., $BC = 4$ cm., $CD = 6$ cm.

, $AD = 7$ cm.

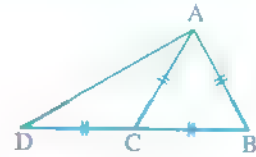

Prove that : $m(\angle ABC) > m(\angle ADC)$

[b] In the opposite figure :

$$AB = AC = CB = CD$$

Prove that : $\overline{AB} \perp \overline{AD}$

[c] XYZ is a triangle in which : $XY = 10$ cm. , $YZ = 6$ cm. and $XZ = 8$ cm.

Arrange the measures of the angles of the triangle.

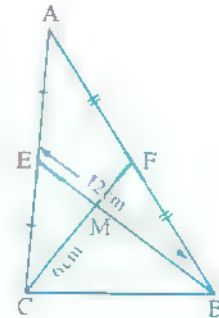

[d] In the opposite figure :

ABC is a triangle in which : F , E are the midpoints of \overline{AB} and \overline{AC} respectively

$$EB = 12 \text{ cm.}$$

$$MC = 6 \text{ cm.}$$

Find with proof : The length of each of \overline{EM} and \overline{MF}

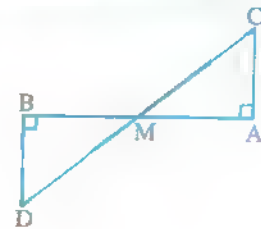

5 [a] In the opposite figure :

$$\overline{DC} \cap \overline{AB} = \{M\}$$

$$m(\angle A) = m(\angle B) = 90^\circ$$

Prove that : $DC > AB$

[b] ABC is a triangle in which : $m(\angle A) = (6x)^\circ$

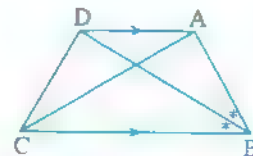

$$m(\angle B) = (4x - 9)^\circ, m(\angle C) = 3(x - 2)^\circ$$

Arrange the lengths of the sides of the triangle.

[c] In the opposite figure :

$\overline{AD} \parallel \overline{BC}$, \overline{BD} bisects $\angle ABC$

Prove that : $\triangle BAD$ is an isosceles triangle.

4

Giza Governorate

Answer the following questions :

1 Choose the correct answer :

1 If the measures of two angles of a triangle are 40° , 100° , then the triangle is triangle.

(a) an isosceles (b) an equilateral (c) a scalene (d) a right-angled

2 The angle whose measure is more than 90° and less than 180° is angle.

(a) an acute (b) an obtuse (c) a straight (d) a reflex

Geometry

- 3 If the lengths of two sides in an isosceles triangle are 7 cm. and 3 cm. , then the length of the third side is cm.
 (a) 3 (b) 10 (c) 7 (d) 4
- 4 In $\triangle ABC$, if $m(\angle B) = 120^\circ$, then the longest side in it is
 (a) \overline{BC} (b) \overline{AC} (c) \overline{AB} (d) its median.
- 5 If $\triangle ABC$ is right-angled at B , $AB = 3$ cm. , $BC = 4$ cm. , then the length of the median from B is cm.
 (a) 5 (b) 4 (c) 2.5 (d) 6
- 6 In $\triangle ABC$, if $m(\angle A) = 30^\circ$, $m(\angle B) = 90^\circ$ and $AC = 10$ cm. , then $BC =$
 (a) 20 cm. (b) 15 cm. (c) 10 cm. (d) 5 cm.

2 Complete each of the following :

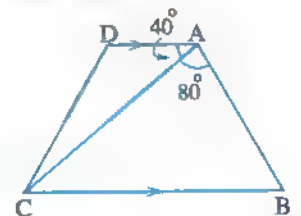

- 1 The angle of measure 70° complements an angle of measure $^\circ$
- 2 In $\triangle ABC$, if $AB = 3$ cm. , $BC = 5$ cm. , then $AC \in].....,[$
- 3 If $\overline{AB} \equiv \overline{CD}$ and $AB = 6$ cm. , then $AB + CD =$ cm.
- 4 The bisector of the vertex angle of an isosceles triangle and
- 5 The point of intersection of the medians of the triangle divides each median in the ratio : from the vertex.

3 [a] In the opposite figure :

$\overline{AD} \parallel \overline{BC}$, $m(\angle BAC) = 80^\circ$

and $m(\angle DAC) = 40^\circ$

Prove that : $BC > AC$

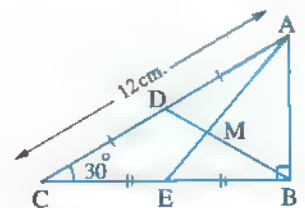

[b] In the opposite figure :

$\triangle ABC$ is right-angled at B , $m(\angle C) = 30^\circ$

, D is the midpoint of \overline{AC}

, E is the midpoint of \overline{BC} , $AC = 12$ cm.

Find : The length of each of \overline{BD} , \overline{BM} and \overline{AB}

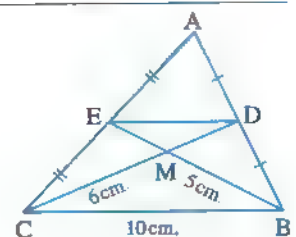

4 [a] In the opposite figure :

D and E are the midpoints of \overline{AB} and \overline{AC} respectively

, $BC = 10$ cm. , $MB = 5$ cm. and $MC = 6$ cm.

Find : The perimeter of $\triangle MDE$

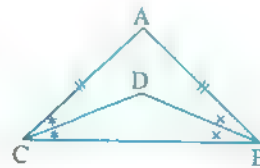

[b] In the opposite figure :

$AB = AC$, \overline{BD} bisects $\angle ABC$

and \overline{CD} bisects $\angle ACB$

Prove that : $\triangle DBC$ is an isosceles triangle.

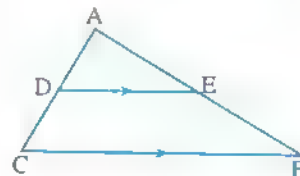

5 [a] In the opposite figure :

ABC is a triangle in which :

$AB > AC$ and $\overline{DE} \parallel \overline{BC}$

Prove that : $m(\angle ADE) > m(\angle AED)$

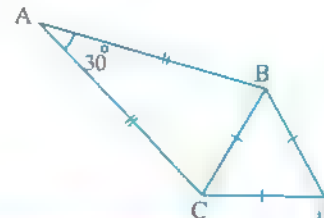

[b] In the opposite figure :

$m(\angle A) = 30^\circ$, $AB = AC$

and $\triangle DBC$ is equilateral.

Find : $m(\angle ABD)$

Bozdog El Dakroun Directorate

Bozdog El Dakroun Directorate

Answer the following questions :

1 Choose the correct answer :

1 The lengths 9 cm. , 4 cm. and may be the side lengths of an isosceles triangle.

- (a) 9 cm. (b) 13 cm. (c) 5 cm. (d) 4 cm.

2 In $\triangle ABC$, if $m(\angle B) = 130^\circ$, then the longest side of it is

- (a) \overline{BC} (b) \overline{AC} (c) \overline{AB} (d) its median.

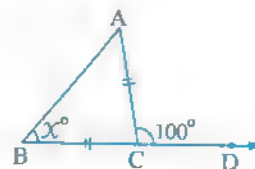

3 In the opposite figure :

$CA = CB$, $m(\angle B) = x^\circ$

, $m(\angle ACD) = 100^\circ$ where $C \in \overline{BD}$

, then $x = \dots\dots\dots$

- (a) 50° (b) 100° (c) 150° (d) 200°

4 The measure of the exterior angle of an equilateral triangle equals

- (a) 30° (b) 60° (c) 90° (d) 120°

5 In $\triangle ABC$, if $AB = 6$ cm. and $AC = 7$ cm. , then $BC \in \dots\dots\dots$

- (a) $]6, 13[$ (b) $[6, 7[$ (c) $]1, 13[$ (d) $[1, 7[$

8 In the opposite figure :

$AD = DC$, $m(\angle C) = 30^\circ$

, $m(\angle ABC) = 90^\circ$, $AB = 5$ cm.

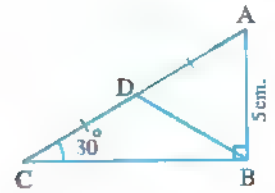

, then the perimeter of $\triangle ABD = \dots\dots\dots$ cm.

(a) 5

(b) 15

(c) 20

(d) 25

2 Complete the following :

1 ABC is a triangle in which $AB = AC$ and $m(\angle A) = 60^\circ$, if its perimeter = 18 cm.

, then $BC = \dots\dots\dots$ cm.

2 The number of the axes of symmetry of the equilateral triangle equals $\dots\dots\dots$

3 The longest side of the right-angled triangle is the $\dots\dots\dots$

4 If the angles of a triangle are congruent , then the triangle is $\dots\dots\dots$

5 In $\triangle ABC$, if $AB > BC$, then $m(\angle A) \dots\dots\dots m(\angle C)$

3 [a] In the opposite figure :

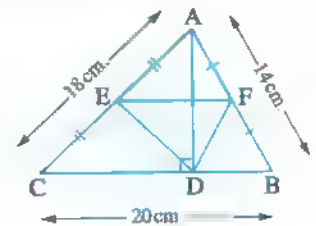

ABC is a triangle in which $AB = 14$ cm.

, $AC = 18$ cm. , $BC = 20$ cm.

, E is the midpoint of \overline{AC}

, F is the midpoint of \overline{AB} and $\overline{AD} \perp \overline{BC}$

Find : The perimeter of $\triangle DEF$

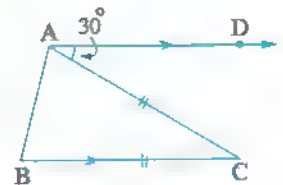

[b] In the opposite figure :

ABC is a triangle in which $AC = BC$

, $\overline{AD} \parallel \overline{BC}$, $m(\angle DAC) = 30^\circ$

Find with proof : The measures of the angles of $\triangle ABC$

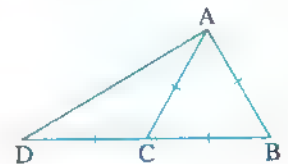

4 [a] In the opposite figure :

$AB = BC = AC = DC$

Prove that :

$m(\angle BAD) = 90^\circ$

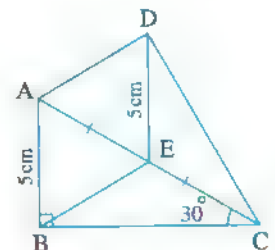

[b] In the opposite figure :

$m(\angle ABC) = 90^\circ$, E is the midpoint of \overline{AC}

, $m(\angle ACB) = 30^\circ$

, $AB = DE = 5$ cm.

Prove that : $m(\angle ADC) = 90^\circ$

- 5 [a] In $\triangle ABC$, $m(\angle A) = 40^\circ$, $m(\angle B) = 75^\circ$, $m(\angle C) = 65^\circ$
 , arrange the lengths of the sides of this triangle descendingly.

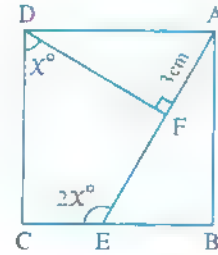

[b] In the opposite figure :

ABCD is a square , $E \in \overline{BC}$

where $m(\angle FDC) = x^\circ$ and $m(\angle FEC) = 2x^\circ$

, $\overline{DF} \perp \overline{AE}$, $AF = 3$ cm.

Calculate : The area of the square ABCD

Answer the following questions :

1 Complete :

- 1 If $\triangle ABC$ is a right-angled triangle at B , $m(\angle A) = 30^\circ$, $AC = 10$ cm.
 , then $CB = \dots\dots\dots$ cm.
- 2 In $\triangle ABC$, $m(\angle A) = m(\angle B) = m(\angle C)$, then the measure of the exterior angle
 equals $\dots\dots\dots^\circ$
- 3 In $\triangle ABC$, $AB = AC$, $m(\angle B) = x + 30^\circ$, $m(\angle C) = 2x + 5^\circ$, then $x = \dots\dots\dots^\circ$
- 4 In a triangle , if two angles are unequal in measure , then the greater angle in measure
 is opposite to $\dots\dots\dots$
- 5 In any triangle , the sum of the lengths of any two sides $\dots\dots\dots$ the length of
 the third side.

2 Choose the correct answer :

- 1 If \overline{AD} is a median of $\triangle ABC$ and M is the point of concurrence of the medians , then
 $AM = \dots\dots\dots AD$
 (a) $\frac{2}{3}$ (b) $\frac{1}{2}$ (c) $\frac{3}{2}$ (d) 2
- 2 The measure of one of the base angles of an isosceles triangle is 65° , then the measure
 of its vertex angle equals $\dots\dots\dots^\circ$
 (a) 65 (b) 50 (c) 130 (d) 55
- 3 In the triangle ABC , if $m(\angle A) = 50^\circ$, $m(\angle B) = 60^\circ$, then the longest side
 is $\dots\dots\dots$
 (a) \overline{AB} (b) \overline{BC} (c) \overline{AC} (d) 110 cm.
- 4 The numbers which can not be side lengths of a triangle are $\dots\dots\dots$
 (a) 3 , 3 , 3 (b) 3 , 3 , 4 (c) 3 , 3 , 5 (d) 3 , 3 , 6

Geometry

- 5 The number of the axes of symmetry of the scalene triangle is

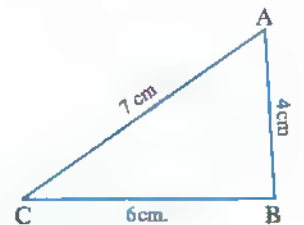

(a) 1 (b) 2 (c) 3 (d) 0

- 6 If $\triangle XYZ$ is right-angled at Y , then XZ YZ

(a) < (b) \leq (c) > (d) =

- 3 [a] In the opposite figure :

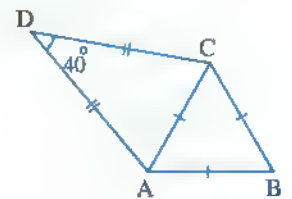

Arrange the angles of $\triangle ABC$ descendingly due to their measures.

- [b] In the opposite figure :

$m(\angle D) = 40^\circ$, $DA = DC$
and $\triangle ABC$ is an equilateral triangle.

Find : $m(\angle DCB)$

- 4 [a] In the opposite figure :

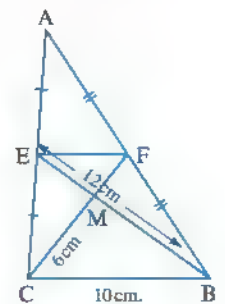

ABC is a triangle

, F and E are the midpoints of \overline{AB} and \overline{AC} respectively

If $BE = 12$ cm, $CM = 6$ cm.

, $BC = 10$ cm.

, then find : The perimeter of $\triangle MEF$

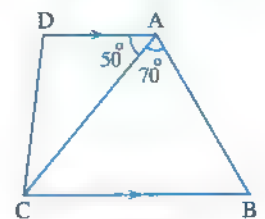

- [b] In the opposite figure :

$\overline{AD} \parallel \overline{BC}$, $m(\angle CAB) = 70^\circ$

, $m(\angle DAC) = 50^\circ$

Prove that : $BC > AC$

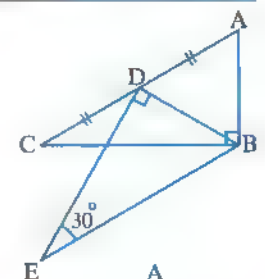

- 5 [a] In the opposite figure :

$m(\angle ABC) = m(\angle BDE) = 90^\circ$

, $m(\angle E) = 30^\circ$

, D is the midpoint of \overline{AC}

Prove that : $AC = BE$

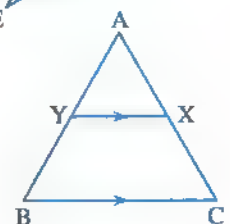

- [b] In the opposite figure :

ABC is a triangle in which :

$AB = AC$, $\overline{XY} \parallel \overline{CB}$

Prove that : $\triangle AXY$ is an isosceles triangle.

Answer the following questions :

1 Choose the correct answer :

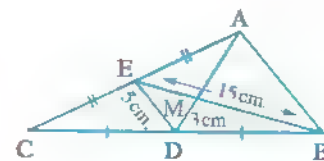

- 1 An isosceles triangle has two sides of lengths 6 cm. and 12 cm. , then the length of the third side equals cm.
 (a) 6 (b) 9 (c) 12 (d) 18
- 2 In $\triangle XYZ$, if $m(\angle Y) = 115^\circ$, then the longest side is
 (a) \overline{XY} (b) \overline{YZ}
 (c) \overline{ZX} (d) the median of the triangle.
- 3 The lengths 5 cm. , 4 cm. and cm. are lengths of sides of a triangle.
 (a) 8 (b) 9 (c) 12 (d) 10
- 4 The triangle having two angles of measures 74° and 53° is triangle.
 (a) an isosceles (b) an equilateral (c) a scalene (d) a right-angled
- 5 The intersection point of the medians of a triangle divides each median by the ratio 1 : from the base.
 (a) 1 (b) 2 (c) 3 (d) 4
- 6 If two sides of a triangle have unequal lengths , then the smaller side is opposite to the angle of the measure from that is opposite to the other side.
 (a) greater (b) smaller (c) equal (d) otherwise

2 Complete each of the following :

- 1 The length of the median of the right-angled triangle drawn from the vertex of the right angle equals the length of the hypotenuse.
- 2 The number of the axes of symmetry of an isosceles triangle is
- 3 The measure of the exterior angle of the equilateral triangle equals $^\circ$
- 4 The two angles of the base of an isosceles triangle are
- 5 The sum of the measures of the accumulative angles at a point equals $^\circ$

3 [a] In the opposite figure :

If E is the midpoint of \overline{AC} and D is the midpoint of \overline{BC}
 , $ED = 5$ cm. , $MD = 3$ cm. and $BE = 15$ cm.
 , find : The perimeter of $\triangle AMB$

- [b] ABC is a triangle in which : $m(\angle B) = 40^\circ$, $m(\angle C) = 80^\circ$
 Arrange its side lengths ascendingly.

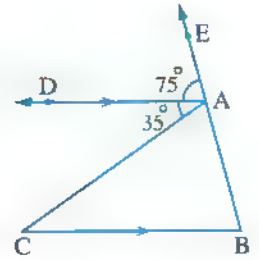

4 [a] In the opposite figure :

$$\overrightarrow{AD} \parallel \overrightarrow{BC}$$

$$, m(\angle EAD) = 75^\circ$$

$$\text{and } m(\angle DAC) = 35^\circ$$

Prove that : $AC > AB$

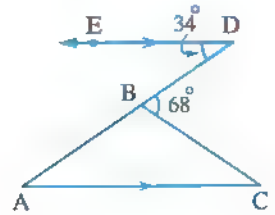

[b] In the opposite figure :

$$\overrightarrow{DE} \parallel \overrightarrow{AC}$$

$$, m(\angle EDA) = 34^\circ$$

$$\text{and } m(\angle DBC) = 68^\circ$$

Prove that : $\triangle ABC$ is an isosceles triangle.

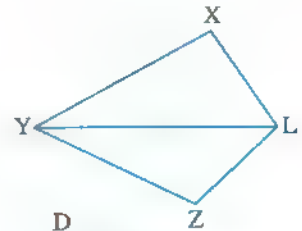

5 [a] In the opposite figure :

$$\text{If } XY > XL$$

$$, YZ > ZL$$

, prove that : $m(\angle XLZ) > m(\angle XYZ)$

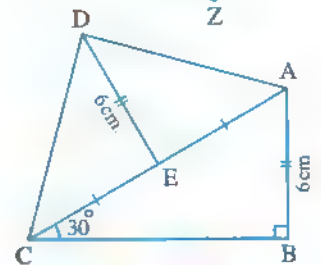

[b] In the opposite figure :

$$m(\angle B) = 90^\circ , m(\angle ACB) = 30^\circ$$

, E is the midpoint of \overline{AC} and $AB = DE = 6$ cm.

Find : 1 The length of \overline{AC}

2 $m(\angle ADC)$

Answer the following questions :

1 Choose the correct answer :

1 In any isosceles triangle , the type of the base angles is

- (a) acute. (b) right. (c) obtuse. (d) reflex.

2 The medians of the triangle intersect at

- (a) 4 points. (b) 3 points. (c) 2 points. (d) a point.

3 ABC is a triangle in which $m(\angle A) = 100^\circ$, then the greatest side in length in the triangle is

- (a) \overline{AB} (b) \overline{AC} (c) \overline{BC} (d) \overline{BD}

4 The numbers which can be lengths of sides of a triangle are

- (a) 0 , 3 , 5 (b) 3 , 3 , 5 (c) 3 , 3 , 6 (d) 3 , 3 , 7

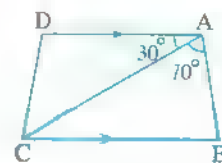

- 5] The triangle which has three axes of symmetry is
- (a) scalene. (b) isosceles. (c) right-angled. (d) equilateral.
- 6] If $\triangle ABC$ is an equilateral triangle, then $m(\angle B) = \dots\dots\dots$
- (a) 30° (b) 60° (c) 70° (d) 90°

2 Complete :

- 1 In $\triangle ABC$, if the point D is the midpoint of \overline{AB} and the point E is the midpoint of \overline{AC} , then $DE = \dots\dots\dots BC$
- 2 The base angles in the isosceles triangle are in measure.
- 3 In the triangle, the smallest angle in measure is opposite to side in length.
- 4 In the triangle ABC, if $AB = AC$, $m(\angle A) = 70^\circ$, so $m(\angle C) = \dots\dots\dots^\circ$
- 5 The point of concurrence of the medians of the triangle divides each median in the ratio of from the base.

3 [a] In the opposite figure :

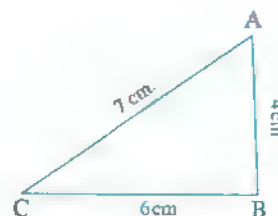

$\overline{AD} \parallel \overline{BC}$, $m(\angle BAC) = 70^\circ$
 $m(\angle DAC) = 30^\circ$
 Prove that : $AC > BC$

[b] In the opposite figure :

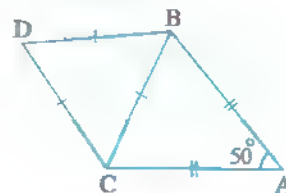

$AB = 4 \text{ cm.}$, $BC = 6 \text{ cm.}$
 $AC = 7 \text{ cm.}$

Arrange the measures of the angles of the triangle ABC descendingly.

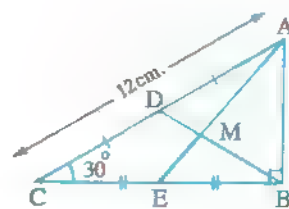

4 [a] In the opposite figure :

$m(\angle A) = 50^\circ$, $AB = AC$
 and $\triangle DBC$ is an equilateral triangle.
 Find : $m(\angle ABD)$

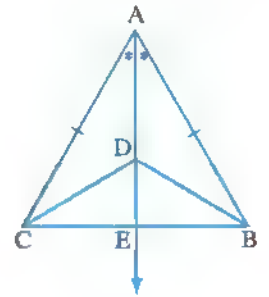

[b] In the opposite figure :

$\triangle ABC$ is right-angled at B, $m(\angle C) = 30^\circ$
 D is the midpoint of \overline{AC}
 E is the midpoint of \overline{BC} , $AC = 12 \text{ cm.}$
 Find : The length of each of \overline{BD} , \overline{BM} and \overline{AB}

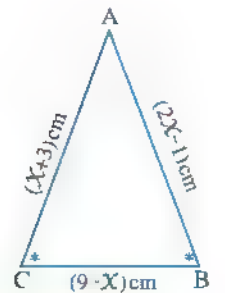

5 [a] In the opposite figure :

ABC is a triangle in which :
 $AB = AC$, \overrightarrow{AE} bisects $\angle BAC$
 $\overline{AE} \cap \overline{BC} = \{E\}$, $D \in \overline{AE}$
Prove that : **1** $BE = \frac{1}{2} BC$
2 $BD = CD$

[b] In the opposite figure :

ABC is a triangle in which :
 $m(\angle B) = m(\angle C)$
 $AB = (2x - 1) \text{ cm.}$
 $AC = (x + 3) \text{ cm.}$, $BC = (9 - x) \text{ cm.}$
Find : The perimeter of the triangle ABC

Answer the following questions :

1 Complete the following :

- 1** The base angles of the isosceles triangle are
- 2** In $\triangle ABC$, if $\overline{AB} \perp \overline{BC}$ and $AB = BC$, then $m(\angle A) = \dots\dots\dots^\circ$
- 3** In $\triangle ABC$, if $AB > AC$, then $m(\angle C) \dots\dots\dots m(\angle B)$
- 4** The triangle whose side lengths are $(2x - 1) \text{ cm.}$, $(x + 3) \text{ cm.}$, 7 cm. becomes an equilateral triangle when $x = \dots\dots\dots \text{ cm.}$
- 5 In the opposite figure :**
 $AC = \dots\dots\dots BZ$

2 Choose the correct answer from those given :

- 1** The sum of lengths of any two sides in a triangle is the length of the third side.
 - (a) smaller than
 - (b) greater than
 - (c) equal to
 - (d) twice

- 2 The measure of the exterior angle of the equilateral triangle equals
 (a) 30° (b) 60° (c) 90° (d) 120°
- 3 The length of the hypotenuse of the right-angled triangle equals the length of the median drawn from the vertex of the right angle.
 (a) third (b) quarter (c) half (d) twice
- 4 The lengths of two sides in a triangle are 4 cm. and 9 cm. and it has one axis of symmetry, then the length of the third side is
 (a) 4 cm. (b) 5 cm. (c) 9 cm. (d) 13 cm.
- 5 The quadrilateral ABCD in which \overline{BD} is an axis of symmetry of \overline{AC} may be a
 (a) rhombus. (b) rectangle. (c) parallelogram. (d) trapezium.

6 In the opposite figure :

$x + y = \dots\dots\dots$

- (a) 100° (b) 280°
 (c) 140° (d) 80°

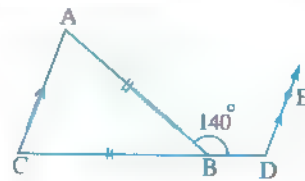

3 [a] In the opposite figure :

$AB = BC$, $m(\angle ABD) = 140^\circ$

and $\overline{AC} \parallel \overline{DE}$

Find : $m(\angle EDC)$

[b] In the opposite figure :

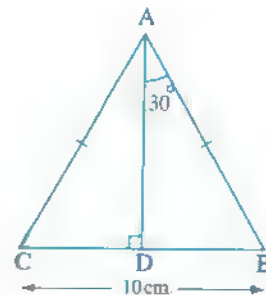

$AB = AC$, $BC = 10$ cm.

, $m(\angle BAD) = 30^\circ$

and $\overline{AD} \perp \overline{BC}$

Find : 1 The length of each of \overline{BD} and \overline{AD}

2 The area of $\triangle ABC$

4 [a] In the opposite figure :

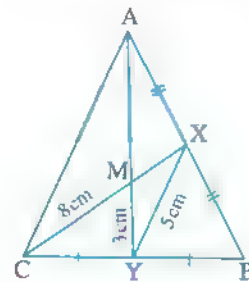

ABC is a triangle, X is the midpoint of \overline{AB}

, Y is the midpoint of \overline{BC} , $XY = 5$ cm.

, $\overline{XC} \cap \overline{AY} = \{M\}$ where $CM = 8$ cm.

, $YM = 3$ cm.

Find : The perimeter of $\triangle MXY$

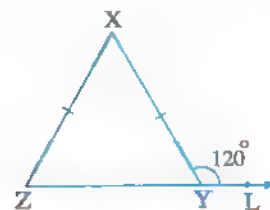

[b] In the opposite figure :

$XY = XZ$, $m(\angle XYL) = 120^\circ$, $L \in \overrightarrow{ZY}$

Prove that :

$\triangle XYZ$ is an equilateral triangle.

5 [a] In the opposite figure :

XYZ is a right-angled triangle

at Y and $M \in \overline{YZ}$

Prove that : $XZ > XM$

[b] In the opposite figure :

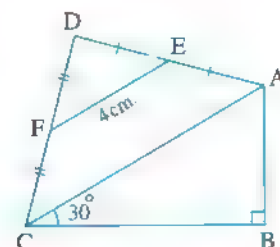

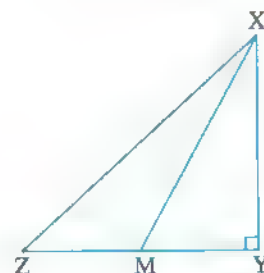

$ABCD$ is a quadrilateral in which :

$m(\angle B) = 90^\circ$, E is the midpoint of \overline{AD}

, F is the midpoint of \overline{CD}

, $m(\angle ACB) = 30^\circ$ and $EF = 4$ cm.

Find by proof : The length of \overline{AB}

10

El-Gharbia Governorate

Ministry of Education
El-Gharbia Governorate

Answer the following questions :

1 Choose the correct answer :

1 In $\triangle ABC$, if $m(\angle C) = 65^\circ$, $m(\angle A) = 75^\circ$, then

- (a) $AB > BC$ (b) $AB < AC$ (c) $BC > AB$ (d) $AB = AC$

2 The sum of measures of two angles in the equilateral triangle equals

- (a) 180° (b) 60° (c) 360° (d) 120°

3 The numbers 5 , 4 , can be lengths of sides of a triangle.

- (a) 8 (b) 9 (c) 10 (d) 12

4 If M is the point of intersection of the medians of $\triangle ABC$ and D is the midpoint of \overline{BC} , then $AD = \dots\dots\dots$

- (a) $2 AM$ (b) $3 MD$ (c) $\frac{2}{3} MD$ (d) AM

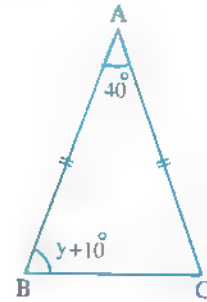

5 If $\triangle ABC$ is right-angled at B , then

- (a) $AC < AB$ (b) $AC > BC$ (c) $AB = AC$ (d) $BC > AC$

6] In the opposite figure :

$y = \dots\dots\dots$

- (a) 30°
- (b) 40°
- (c) 60°
- (d) 70°

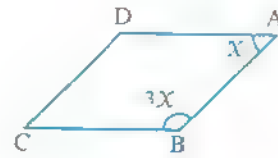

2] Complete the following :

- 1] In $\triangle XYZ$, if $XY = XZ$, $\overline{XL} \perp \overline{YZ}$, then \overline{XL} bisects each of $\dots\dots\dots$ and $\dots\dots\dots$.
- 2] The number of axes of symmetry of the isosceles triangle is $\dots\dots\dots$.
- 3] If ABC is a right-angled triangle at B, $AB = BC$, then $m(\angle C) = \dots\dots\dots^\circ$.
- 4] The longest side of the right-angled triangle is $\dots\dots\dots$.

5] In the opposite figure :

ABCD is a parallelogram
 , then $X = \dots\dots\dots^\circ$

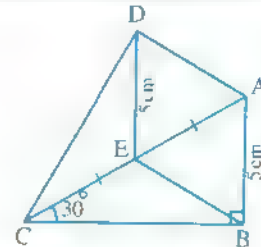

3] [a] In the opposite figure :

ABC is a right-angled triangle at B
 $m(\angle ACB) = 30^\circ$, $AB = 5$ cm.

and E is the midpoint of \overline{AC}

If $DE = 5$ cm. , prove that : $m(\angle ADC) = 90^\circ$

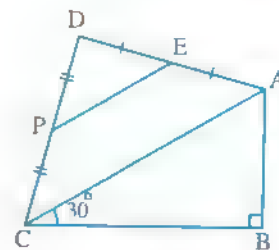

[b] In the opposite figure :

$m(\angle B) = 90^\circ$, $m(\angle ACB) = 30^\circ$

E is the midpoint of \overline{AD}

, P is the midpoint of \overline{CD}

Prove that : $AB = EP$

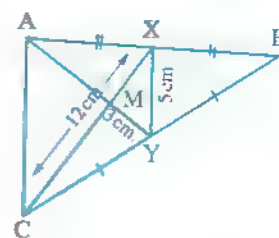

4] [a] In the opposite figure :

M is the intersection point of the medians
 of $\triangle ABC$, $XY = 5$ cm.

, $CX = 12$ cm. , $MY = 3$ cm.

Find with proof : The perimeter of $\triangle MAC$

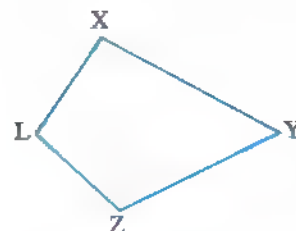

Geometry

[b] In the opposite figure :

$XY > XL$ and $YZ > ZL$

Prove that :

$m(\angle XLZ) > m(\angle XYZ)$

5 [a] In the opposite figure :

ABC is a triangle in which $AB = AC$

, \overrightarrow{AE} bisects $\angle BAC$

Prove that :

1 $BE = \frac{1}{2} BC$

2 $BD = CD$

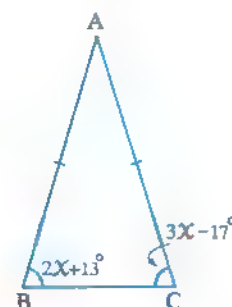

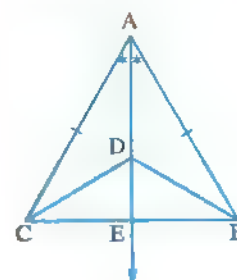

[b] In the opposite figure :

$AB = AC$, $m(\angle B) = 2x + 13^\circ$

, $m(\angle C) = 3x - 17^\circ$

Find :

The measures of the angles of $\triangle ABC$

11

Suez Governorate

Answer the following questions :

1 Choose the correct answer :

1 In $\triangle ABC$, if $AB = 3$ cm. , $BC = 5$ cm. , then $AC \in$

(a) $]3, 5[$

(b) $[3, 5]$

(c) $]2, 8[$

(d) $[2, 8]$

2 If the lengths of two sides of an isosceles triangle are 5 cm. and 10 cm. , then the length of the third side is cm.

(a) 10

(b) 5

(c) 15

(d) 4

3 In $\triangle ABC$, if $m(\angle A) = 100^\circ$, then the longest side of it is

(a) \overline{AB}

(b) \overline{AC}

(c) \overline{BC}

(d) its median.

4 In $\triangle ABC$, if $2m(\angle A) = m(\angle B) + m(\angle C)$, then $m(\angle A) =$ °

(a) 45

(b) 90

(c) 60

(d) 120

5 If $A \in$ the axis of symmetry of \overline{BC} , then \overline{AB} \overline{AC}

(a) \equiv

(b) $=$

(c) $//$

(d) \perp

- 6 The point of intersection of the medians of the triangle divides each of them in the ratio from the vertex.

(a) 2 : 1 (b) 3 : 1 (c) 3 : 2 (d) 1 : 2

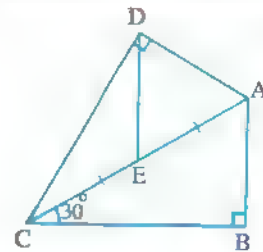

2 Complete :

- 1 The base angles of an isosceles triangle are in measure.
 2 If $\triangle ABC$ has one axis of symmetry and $m(\angle A) = 120^\circ$, then $m(\angle B) = \dots\dots^\circ$
 3 In $\triangle ABC$, if $AB > AC$, then $m(\angle C) > \dots\dots\dots$
 4 The bisector of the vertex angle of an isosceles triangle and
 5 In a triangle, if two angles are unequal in measure, then the greater angle in measure is opposite to

3 [a] In the opposite figure :

$m(\angle B) = 90^\circ$, $m(\angle ADC) = 90^\circ$
 $m(\angle ACB) = 30^\circ$
 \overline{DE} is a median in $\triangle ADC$

Prove that : $AB = DE$

- [b] In $\triangle ABC$, if $AB = 7$ cm., $BC = 5$ cm., $AC = 6$ cm., arrange the measures of the angles of the triangle ABC ascendingly.

4 [a] In the opposite figure :

$AB > BC$, $AD > CD$

Prove that :

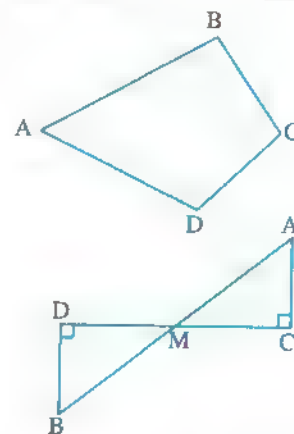

$m(\angle C) > m(\angle A)$

[b] In the opposite figure :

$\overline{AB} \cap \overline{CD} = \{M\}$

$m(\angle C) = m(\angle D) = 90^\circ$

Prove that : $AB > DC$

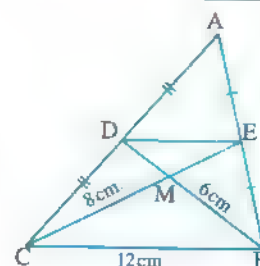

5 [a] In the opposite figure :

If D, E are the midpoints of \overline{AC} , \overline{AB}

$MB = 6$ cm., $MC = 8$ cm., $BC = 12$ cm.

Find : The perimeter of $\triangle MDE$

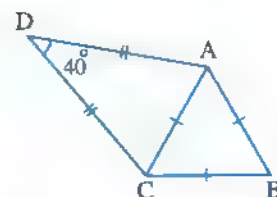

[b] In the opposite figure :

$$AB = BC = AC, DA = DC$$

$$, m(\angle D) = 40^\circ$$

Find : $m(\angle BAD)$

Math Department

Answer the following questions :

1 Choose the correct answer :

- 1 In $\triangle ABC$, if $AC = 4$ cm. , $BC = 3$ cm. , then $m(\angle B)$ $m(\angle A)$
 (a) $>$ (b) $<$ (c) $=$ (d) \leq
- 2 The length of the side opposite to the angle of measure 30° in the right-angled triangle equals the length of the hypotenuse.
 (a) half (b) twice (c) third (d) quarter
- 3 In $\triangle ABC$, if $m(\angle A) = 100^\circ$ and $AB = AC$, then $m(\angle ABC) = \dots$
 (a) 80° (b) 60° (c) 40° (d) 30°
- 4 The point of intersection of the medians of the triangle divides each of them in the ratio from the base.
 (a) $1 : 3$ (b) $3 : 1$ (c) $1 : 2$ (d) $2 : 1$
- 5 If $\triangle ABD$ is obtuse-angled at B and C is the midpoint of \overline{BD} , then the longest side is
 (a) \overline{AB} (b) \overline{AC} (c) \overline{AD} (d) \overline{BD}
- 6 The triangle whose side lengths are 2 cm. , $(x + 3)$ cm. and 5 cm. , becomes an isosceles triangle when $x = \dots$ cm.
 (a) 1 (b) 2 (c) 3 (d) 4

2 Complete :

- 1 The median of an isosceles triangle from the vertex angle bisects and is perpendicular to
- 2 The measure of the exterior angle at any vertex of the equilateral triangle is $^\circ$
- 3 The base angles of the isosceles triangle are
- 4 ABC is a triangle in which $AB = 4$ cm. , $BC = 6$ cm. , then $AC \in] \dots , \dots [$
- 5 The longest side in the right-angled triangle is

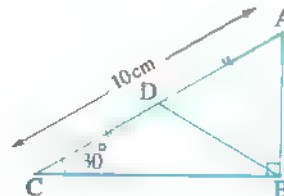

- 3 [a]** In $\triangle ABC$, if $m(\angle A) = (6x)^\circ$, $m(\angle B) = (4x - 9)^\circ$ and $m(\angle C) = 3(x - 2)^\circ$, arrange the side lengths of $\triangle ABC$ ascendingly.

[b] In the opposite figure :

$$m(\angle ABC) = 90^\circ, m(\angle C) = 30^\circ$$

$$AD = DC \text{ and } AC = 10 \text{ cm.}$$

Find : The perimeter of $\triangle ABD$

4 [a] In the opposite figure :

$$\text{If } \overline{AC} \cap \overline{BD} = \{M\}$$

$$\text{, } \overline{AD} \parallel \overline{BC} \text{ and } MB = MC$$

, prove that :

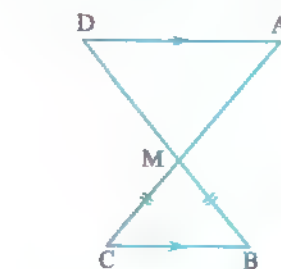

$\triangle MAD$ is isosceles.

[b] In the opposite figure :

$$m(\angle BAC) = 70^\circ, m(\angle B) = 55^\circ$$

$$\text{and } m(\angle ACD) = 90^\circ$$

Prove that : $AD > AB$

5 [a] In the opposite figure :

$$m(\angle D) = 40^\circ, DA = DC$$

and $\triangle ABC$ is equilateral

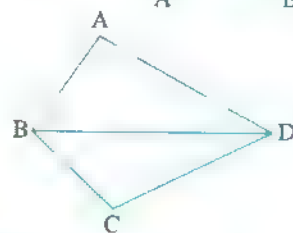

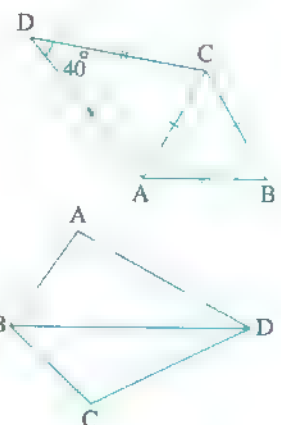

Find : $m(\angle DCB)$

[b] In the opposite figure :

$$AB < AD \text{ and } BC < CD$$

Prove that :

$$m(\angle ABC) > m(\angle ADC)$$

13

Damietta Governorate

Answer the following questions :

1 Complete each of the following :

- 1 If the measure of one of the base angles of an isosceles triangle equals 50° , then the measure of the vertex angle equals $^\circ$
- 2 The supplementary of the obtuse angle is angle.

Geometry

- 3 The longest side in the right-angled triangle is
- 4 The perpendicular straight line on a line segment from its midpoint is called
- 5 If 4 cm. , 7 cm. are the lengths of two sides in a triangle , then < the length of the third side <

2 Choose the correct answer :

- 1 The point of intersection of the medians of the triangle divides each of them in the ratio of from the base.
 (a) 1 : 2 (b) 2 : 1 (c) 1 : 1 (d) 1 : 3
- 2 In $\triangle ABC$, if $m(\angle B) = 70^\circ$, $m(\angle C) = 50^\circ$, then AB AC
 (a) $>$ (b) $<$ (c) $=$ (d) \geq
- 3 The number of the quadrilaterals in the figure  is
 (a) 3 (b) 4 (c) 5 (d) 6
- 4 In the right-angled triangle , the length of the median from the vertex of the right angle equals the length of the hypotenuse.
 (a) $\frac{1}{2}$ (b) double (c) $\frac{1}{3}$ (d) $\frac{1}{4}$
- 5 The sum of the measures of the accumulative angles at a point equals $^\circ$
 (a) 90 (b) 180 (c) 360 (d) 308
- 6 The number of lines of symmetry of $\triangle ABC$ in which $AB = AC$, $m(\angle B) = 60^\circ$ is
 (a) 3 (b) 2 (c) 1 (d) zero

3 [a] In the opposite figure :

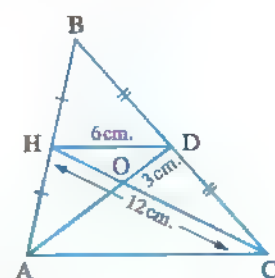

$HD = 6$ cm. , $HC = 12$ cm.

, H is the midpoint of \overline{AB}

and D is the midpoint of \overline{BC}

, $DO = 3$ cm.

Calculate : The perimeter of the triangle AOC

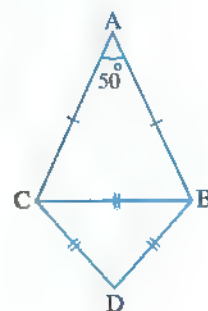

[b] In the opposite figure :

$AB = AC$, $m(\angle A) = 50^\circ$

$\triangle CDB$ is equilateral.

Find with proof : $m(\angle ABD)$

4 [a] In the opposite figure :

$$AB = AC, BD < CD$$

Prove that :

$$m(\angle ABD) > m(\angle ACD)$$

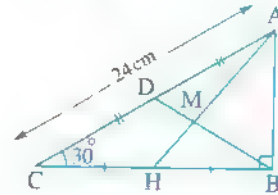

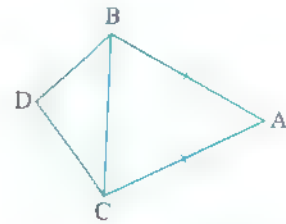

[b] In the opposite figure :

$\triangle ABC$ is right-angled at B

, \overline{AH} , \overline{BD} are two medians

$$, m(\angle C) = 30^\circ, AC = 24 \text{ cm.}$$

Find : The length of each of \overline{AB} , \overline{BD} , \overline{BM}

5 [a] In the opposite figure :

\overline{BD} bisects $\angle ABC$

, $\overline{HD} \parallel \overline{BC}$

Prove that :

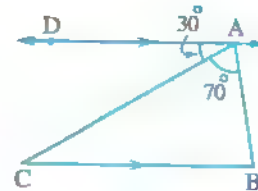

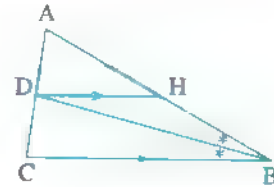

$\triangle HBD$ is an isosceles triangle.

[b] In the opposite figure :

$\overline{AD} \parallel \overline{BC}$, $m(\angle BAC) = 70^\circ$

, $m(\angle DAC) = 30^\circ$

Prove that : $AC > BC$

14 El-Fayoum Governorate

Test 51, Session 7

Mathematics 1101

Answer the following questions :

1 Choose the correct answer from those given :

1 In $\triangle ABC$, if $(AB)^2 = (BC)^2 - (AC)^2$, $m(\angle C) = 42^\circ$, then $m(\angle B) = \dots$

- (a) 40° (b) 90° (c) 48° (d) 110°

2 The scalene triangle has axes of symmetry.

- (a) 3 (b) 2 (c) 1 (d) 0

3 If A lies on the axis of symmetry of \overline{BC} , then $AB \dots AC$

- (a) $<$ (b) $>$ (c) $=$ (d) \leq

- 4 If \overline{AD} is a median of $\triangle ABC$, M is the point of concurrence of the medians, then $MD = \dots\dots\dots AD$
 (a) $\frac{1}{3}$ (b) $\frac{2}{3}$ (c) $\frac{1}{2}$ (d) $\frac{1}{4}$
- 5 If 10 cm., 5 cm. and X cm. are side lengths of an isosceles triangle, then $X = \dots\dots\dots$ cm.
 (a) 5 (b) 10 (c) 15 (d) 4
- 6 The measure of the exterior angle of the equilateral triangle equals $\dots\dots\dots$
 (a) 60° (b) 90° (c) 50° (d) 120°

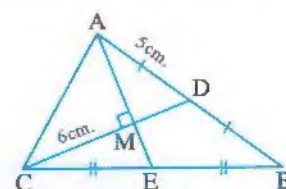

2 Complete the following :

- 1 The total area of a cuboid = 120 cm^2 and its lateral area = 96 cm^2 , then the area of its base equals $\dots\dots\dots \text{ cm}^2$
- 2 The base angles of the isosceles triangle are $\dots\dots\dots$
- 3 ABC is a right-angled triangle at B , $m(\angle C) = 30^\circ$, $AB = 5 \text{ cm}$, then $AC = \dots\dots\dots \text{ cm}$.
- 4 In $\triangle ABC$, if $m(\angle C) = 30^\circ$, $m(\angle A) = 70^\circ$, then the smallest side in length is $\dots\dots\dots$
- 5 In any triangle, if the lengths of two sides are not equal, then the greater side in length is opposite to $\dots\dots\dots$

3 [a] In the opposite figure :

M is the concurrence point of the medians of $\triangle ABC$,
 $\overline{AM} \perp \overline{CD}$, $AD = 5 \text{ cm}$, $MC = 6 \text{ cm}$.

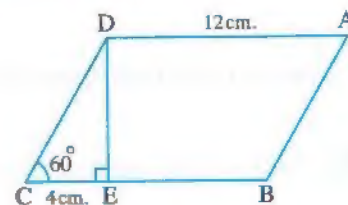

Find with proof : The length of \overline{ME}

[b] In the opposite figure :

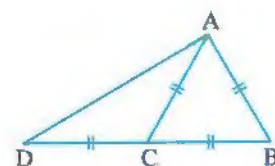

$ABCD$ is a parallelogram
 $m(\angle C) = 60^\circ$, $\overline{DE} \perp \overline{BC}$
 $AD = 12 \text{ cm}$, $CE = 4 \text{ cm}$.

Find with proof : The perimeter of the parallelogram $ABCD$

4 [a] In the opposite figure :

ABC is an equilateral triangle
 $D \in \overline{BC}$, $BC = CD$
 Prove that : $\overline{AB} \perp \overline{AD}$

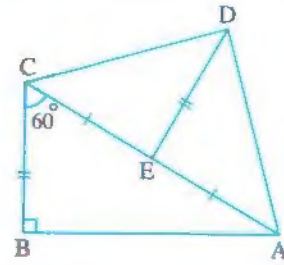

[b] In the opposite figure :

ABC is a right-angled triangle at B

, $m(\angle ACB) = 60^\circ$, E is the midpoint of \overline{AC}

, $DE = BC$

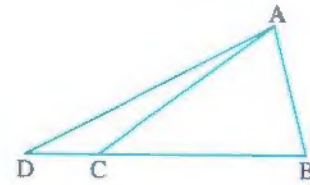

Prove that : $m(\angle ADC) = 90^\circ$

5 [a] In the opposite figure :

$C \in \overline{BD}$, $AC > AB$

Prove that : $m(\angle B) > m(\angle D)$

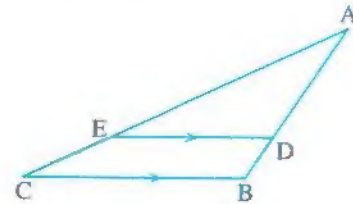

[b] In the opposite figure :

ABC is an obtuse-angled triangle at B

, $\overline{DE} \parallel \overline{BC}$

Prove that : $AE > AD$
